OFFICIAL COAT OF ARMS OF THE DOMINION OF CANADA,
APPROVED NOVEMBER 21, 1921.

CANADA

DOMINION BUREAU OF STATISTICS

THE CANADA YEAR BOOK

1921

Published by Authority of

The Honourable J. A. ROBB, M.P.,

Minister of Trade and Commerce

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1922

PREFACE.

The outstanding feature of the Canada Year Book of 1921 is an increase in the scope of the publication, especially in the letter-press. Historical details have been added to many sections and sub-sections, and historical tables have been inserted to illustrate progress since Confederation.

To particularize, it was felt that the Constitution and Government of Canada required treatment in the light of the altered status of the Dominion, and that the evolving governments of the Provinces should also be described, especially as previous Year Books containing information on these matters are out of print. The same applies to the treatment of the physical characteristics of Canada in section IV. In section V, on Population, are included the results of the census of 1921, as far as available, while vital statistics for the country as a whole are published for the first time. An interesting contribution on the development of agriculture in Canada, by the Deputy Minister of Agriculture, introduces the section on Production, which for the first time includes statistics of the fur trade and closes with an article showing the development of Canadian water powers. In the Trade and Commerce section a new table shows the trade of Canada by main groups, compiled on a classification according to purpose. The development of different means of transportation is outlined in the various sub-sections of the Transportation and Communications section. The Labour, Wages and Prices section has been considerably expanded, through the generous assistance of the Department of Labour; special mention may be made of the article "Canada and the International Labour Organization" (pp. 607-609), contributed by the Assistant Deputy Minister of Labour. The Finance section has been improved by a comprehensive treatment of Dominion Finance since Confederation, and by the publication of a historical table and five-year detailed tables of Provincial Public revenue and expenditure, compiled on a comparable basis by the Finance Statistics Branch of the Bureau, which is also responsible for the compilation of the municipal financial statistics presented. In this section attention may be drawn to the table on pages 717 and 718, showing the development of Canadian banking since Confederation, and to the table on page 754, showing the expansion of life insurance since that date; it is thought that the statistics of insurance are presented in a more intelligible form than previously. To the Administration section has been added, through the courtesy of the Department of Indian Affairs, an authoritative account of the Indians of Canada, as well as a summary treatment of the activities of the new Department of Health, the Department of Soldiers' Civil Re-establishment and the Soldiers' Settlement Board.

In accordance with the general demand for presentation of statistics in graphic form, additions have been made to the graphs contained in the Labour, Wages and Prices section. Also, in response to a general desire for statistics in tabloid form of the progress of Canada during the past half-century, the Statistical Summary of the Progress of Canada has been enlarged so as to include historical as well as current trend statistics.

In all the sections is given the latest information available, the tables in many cases including figures for the fiscal year 1921-22. The titles of articles published in previous editions of the Year Book and not now revised, are given for purposes of reference in the Retrospective Index on page xvii.

The present edition of the Canada Year Book has been edited by Mr. S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc. Grateful acknowledgments are hereby tendered to officials of the Dominion and Provincial Governments throughout Canada, for assistance rendered in the collection of information. The tables have been in the main compiled, as for many years, by Messrs. James Skead and Joseph Wilkins, while most of the diagrams have been drawn by Mr. R. E. Watts.

R. H. COATS,
Dominion Statistician.

Preface iii
Retrospective Index xvii
Errata xvii
Statistical Summary of the Progress of Canada ..... xviii-xxiii
Index 886-909

I. THE CONSTITUTION AND GOVERNMENT OF CANADA.

By S. A. CUDMORE, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., Editor Canada Year Book, Dominion Bureau of Statistics, Ottawa 1-17
The Arms of Canada 17-18

II. PROVINCIAL AND LOCAL GOVERNMENT IN CANADA.

Maritime Provinces. By the late THOMAS BARNARD FLINT, M.A., LL.B., D.C.L., Clerk of the House of Commons of Canada, Ottawa 18-24
Quebec. By G. E. MARQUIS, Chief, Bureau of Statistics of Quebec 24-27
Ontario. By S. A. CUDMORE, B.A. (Tor.), M.A., (Oxon.), F.S.S., F.R. Econ. Soc., Editor Canada Year Book 27-31
Manitoba, Saskatchewan and Alberta. By the REV. EDMUND H. OLIVER, Ph.D., F.R.S.C., Principal of the Presbyterian Theological College, Saskatoon, Saskatchewan 32-39
British Columbia. By JOHN HOSIE, Victoria, B.C. 39-43

III. CHRONOLOGICAL HISTORY OF CANADA, 1497-1921. 43-54

IV. PHYSICAL CHARACTERISTICS OF CANADA.

Geographical Features 55-65
1. Drainage Basins of Canada 60
2. Lengths of Principal Rivers and Tributaries in Canada 60-61
3. Area, Elevation and Depth of the Great Lakes 62
4. Areas of Principal Canadian Lakes, by Provinces 63-65
Geology and Economic Minerals. By R. W. BROCK, M.A., LL.D., F.G.S., Dean, Faculty of Applied Science, University of British Columbia 65-68
Geology in Relation to Agriculture in Canada. By WYATT MALCOLM, National Herbarium, Department of Mines, Ottawa 68-72
The Flora of Canada, By M. O. MALTE, Ph.D., Chief Botanist, National Herbarium, Department of Mines, Ottawa 73-81
Faunas of Canada. By P. A. TAVERNER, Department of Mines, Ottawa 82-87
Economic Geology of Canada, 1920-1921. By WYATT MALCOLM, Geological Survey, Ottawa 87-95

V. AREA AND POPULATION.

1. Land and Water Area of Canada, by Provinces and Territories, as in 1921 95
2. Population of Canada, by Provinces and Territories, in the Census Years 1871 to 1921 97
3. Percentage Distribution of Canadian Population, by Provinces and Territories, 1871 to 1921 98
4. Absolute and Percentage Increase of Population of Canada, by Provinces and Territories, 1921 as compared with 1911 98
5. Population of Canada by Provinces and Territories in 1871 and 1921, and numerical increase in each decade from 1871 to 1921 98
6. Population of Canada by Provinces and Territories in 1871, and increase per cent by decades from 1871 to 1921 99
7. Rural and Urban Population by Provinces and Territories, 1891, 1901, 1911 and 1921. 101
8. Percentage Distribution of Rural and Urban Population by Provinces and Territories, 1891, 1901, 1911 and 1921 102
9. Urban Population of Canada, divided by size of Municipality Groups, 1901, 1911 and 1921 103
10. Area and Population of Canada by Provinces and Electoral Districts, 1921, 1911 and 1901 104-108
11. Population of Cities and Towns having over 5,000 inhabitants in 1921, compared with 1871-81-91-1901-11 108-109
12. Population of Towns and Villages having between 1,000 and 5,000 inhabitants in 1921, as compared with 1901 and 1911 110-112
13. Population of the Prairie Provinces, 1901, 1906, 1911, 1916 and 1921 113
14. Population of the Prairie Provinces by Sex, at each Census Period from 1870 for Manitoba, and from 1901 for Saskatchewan and Alberta 113-114
15. City Population of the Prairie Provinces, 1901, 1906, 1911, 1916 and 1921 114
16. Area and Population of the British Empire, by Countries, 1901, 1911 and 1921 115-117

Vital Statistics.

17. Number of Births, Marriages and Deaths, by Provinces, 1920 121
18. Summary Analysis of Birth Statistics for the calendar year 1920 121
19. Number of Births, Marriages and Deaths, by Principal Cities, during the calendar year 1920 121-122

V. AREA AND POPULATION—concluded.

Immigration.

		Page.
20.	Number of Immigrant Arrivals in Canada, 1897–1922	126
21.	Arrivals at Inland and Ocean Ports in Canada in Fiscal Years 1915–1922	127
22.	Rejections of Immigrants upon arrival at Ocean Ports and Deportations after admission, by principal causes, 1903–1921	128
23.	Number by Nationalities of Immigrants Deported after Admission, 1903–1921	128
24.	Juvenile Immigrants and Applications for their Services, 1901–1921	128
25.	Occupation and Destination of Total Immigrant Arrivals in Canada for the fiscal years 1920 and 1921	129
26.	Destination of Immigrants into Canada, by Provinces, 1901–1921	129–130
27.	Record of Chinese Immigration, 1886–1921	130
28.	Record of Oriental Immigration, 1901–1922	131
29.	Expenditure on Immigration in the fiscal years 1868–1921	131

VI. EDUCATION.

	General Features of Canadian Education Systems	132
	Higher Education in Canada	133
	Education Statistics of Canada	133–134
	Technical Education in Canada	134–135
1.	Statistical Summary of Education in Canada, by Provinces, 1921, or latest year reported	136–139
2.	Number of Schools, Teachers and Pupils in Canada, by Provinces, 1901–1921	140–143
3.	Teachers in Training in Nova Scotia, New Brunswick, Quebec, Ontario and Manitoba, 1901-21, Saskatchewan and Alberta, 1906-1920	143–145
4.	Number of Teachers and Pupils in Roman Catholic Classical Colleges in Quebec, 1901–1921	146
5.	Number of Teachers and Pupils in Collegiate Institutes and High Schools in Ontario, 1901–1921	146
6.	Number of Teachers and Pupils in Continuation Schools in Ontario, 1911–1921	146
7.	Number of Teachers and Pupils in Collegiate Institutes and High Schools in Saskatchewan, 1908–1920	147
8.	Number of Teachers and Pupils in High Schools in British Columbia, 1901–1921	147
9.	Vocational Schools, Teachers and Pupils in Canada, year ended June 30, 1921	147
10.	Receipts and Expenditure for Public Education in Canada, by Provinces, 1901–1921.	148–153
11.	Average annual Salaries of School Teachers, by Provinces, 1920–21 or latest year reported	153
12.	Universities of Canada: Foundation, Affiliation, Faculties and Degrees	154–155
13.	Universities of Canada: Number of Teaching Staff in the Various Faculties, 1920–1921	156
14.	Universities of Canada: Number of Students by Academic Years, 1920–1921	157
15.	Universities of Canada: Number of Students in the Various Faculties, 1920–1921	158–159
16.	Universities of Canada: Financial Statistics, 1920–1921	160–161
17.	Colleges of Canada: Foundation, Affiliation, Faculties and Degrees	162–163
18.	Professional and Affiliated Colleges of Canada: Number of Teaching Staff and Students, 1920–1921	164–165
19.	Colleges of Canada: Financial Statistics, 1920–21	166–167
	Public Libraries in Canada	168–169

VII. CLIMATE AND METEOROLOGY.

	The Climate of Canada since Confederation. By Sir Frederick Stupart, Director, Dominion Meteorological Service, Toronto	169–173
1.	Temperature and Precipitation in 1921, by Months and Observation Stations	174–185
2.	Normal Temperature and Precipitation at selected Canadian Stations	186–193
3.	Averages of Sunshine, Wind and Weather at selected Canadian Stations	194–201

VIII. PRODUCTION.

	The Development of Agriculture in Canada. By J. H. Grisdale, D. Sc.A., Deputy Minister of Agriculture, Ottawa	202–210

Agriculture.

Field Crops.

1.	Area, Yield, Quality and Value of Principal Field Crops in Canada, 1916–21 and Five Year Average, 1916–1920	214–230
2.	Area under Pasture in Canada, 1918–1921	230
3.	Annual Average Yields per acre of Field Crops for Canada, and by Provinces from 1915 to 1921, with Decennial Averages for the years 1911–20	231–233
4.	Areas and Yields of Wheat, Oats, Barley, Rye and Flaxseed in the three Prairie Provinces, 1919–1921	233
5.	Total Areas and Values of Field Crops in Canada, 1916–1921	234
6.	Field Crops of Canada, compared as to Quantity and Value, for 1920 and 1921	235
7.	Quality of Grain Crops as indicated by Average Weight per measured bushel, 1912–1921	235
8.	Average Values per acre of Occupied Farm Lands in Canada, as estimated by Crop Correspondents, 1908–10, 1914–21	236
9.	Average Wages of Farm Help in Canada, as estimated by Crop Correspondents, 1915–21	237–238
10.	Average Wages per year of Farm Help in Canada, as estimated by Crop Correspondents, 1920 and 1921	238

VIII. PRODUCTION—continued.

Agriculture—continued.

Farm Live Stock. PAGE.

11. Numbers of Farm Live Stock in Canada, by Provinces, 1920 and 1921 ... 239–241
12. Estimated Numbers of Farm Live Stock, 1916–1921 ... 242
13. Average Values of Farm Animals and of Wool, as estimated by Crop Correspondents, 1915–21 ... 243–244
14. Average Value per head of Farm Live Stock in Canada, as estimated by Crop Correspondents, 1915–1921 ... 245
15. Estimated Total Values of Farm Live Stock in Canada, by Provinces, 1916–1921 ... 246
16. Estimated Values of Milch Cows and Other Cattle, 1916–1921 ... 247
17. Estimated Numbers and Values of Farm Poultry in Canada, 1920–21 ... 248–249
18. Number of Fur Farms, Value of Land and Buildings and Value of Fur-Bearing Animals, 1920 and 1921 ... 249
19. Number and Value of Fur-bearing Animals on Fur Farms in Canada, 1920 and 1921 ... 250

Dairying.

20. Production and Value of Creamery Butter, by Provinces, 1919–21 ... 251
21. Production and Value of Factory Cheese, by Provinces, 1919–21 ... 252
22. Miscellaneous Products of Dairy Factories, 1919, 1920 and 1921 ... 252
23. Production and Value of Creamery Butter and Factory Cheese in Canada, by Provinces, 1900, 1907, 1910 and 1915–1921 ... 252–254
24. Total Value of All Products of Dairy Factories, by Provinces, 1917–21 ... 254

Fruit Statistics.

25. Production and Value of Commercial Apples in Canada, 1919 and 1920 ... 255
26. Estimated Distribution of Commercial Apples, by Early, Fall and Winter Varieties, 1920 ... 256
27. Production of Apples in Ontario, by Fruit Inspection Districts, 1919 and 1920 ... 256
28. Total Quantities and Values of Fruit Trees, Bushes and Plants sold by Nurserymen in Canada, by Provinces, years ended September 30, 1919 and 1920 ... 257–259

Cold Storage Warehouses.

29. Cold Storage Warehouses in Canada, 1922 ... 260–261

Agricultural Prices.

30. Weekly Range of Prices of Wheat at Winnipeg and Fort William, 1921 ... 262–263
31. Monthly Range of Average Prices of Wheat at Winnipeg and Fort William, 1920–1921. ... 264
32. Weekly Range of Prices of Oats at Winnipeg and Fort William, 1921 ... 264–265
33. Weekly Range of Prices of Barley and Flax at Winnipeg and Fort William, 1921 ... 266
34. Monthly Range of Average Prices of Barley, Oats and Flax at Winnipeg and Fort William, 1920–1921 ... 267
35. Monthly Range of Average Prices in British Markets of Canadian Wheat and Oats, 1920–1921 ... 267
36. Yearly Average Prices of Home Grown Wheat, Barley and Oats in England and Wales, 1902–1921 ... 268
37. Average Monthly Prices of Flour, Bran and Shorts, at Principal Markets, 1921 ... 268
38. Average Prices of Canadian Live Stock at Principal Markets, 1919–1921 ... 269
39. Average Monthly Prices of Canadian Live Stock at Principal Markets, 1921 ... 270
40. Average Prices per lb. paid by farmers for Grade No. 1 Clover and Grass Seed, by Provinces, during April and May, 1922, and average prices for Canada during April and May, 1919–22 ... 270
41. Average prices per lb. paid to farmers for Clover and Grass Seed, by provinces, during April and May, 1922, and average prices for Canada during April and May, 1919–22 ... 271
42. Index Numbers of Agricultural Prices for Canada, 1909–1921 ... 272

Miscellaneous Agricultural Statistics.

43. Estimated Production of Wool, by Provinces, 1921 ... 274
44. Production and Value of Wool in Canada, 1915–21 ... 274
45. Area and Yield of Tobacco in Canada, 1919–21 ... 275
46. Area, Yield and Value of Sugar Beets in Canada and Production of Refined Beetroot Sugar, 1911-20 ... 276
47. Maple Products in the Province of Quebec, 1918–21 ... 277
48. Stocks of Grain in Farmers' hands in Canada at the end of August, 1919–1921 ... 277
49. Stocks of Grain in Canada at the close of the Crop Years, 1919, 1920 and 1921 ... 277–278
50. Stocks of Wheat in Canada, March 31, 1918–22 ... 278
51. Stocks in Canada of Oats, Barley and Flaxseed, March 31, 1921 and 1922 ... 278
52. Distribution of the Canadian Wheat Crops of 1919 and 1920 ... 279
53. Distribution of the Canadian Oat Crops of 1919 and 1920 ... 279
54. Estimated Gross Annual Agricultural Revenue of Canada, by Provinces, 1918–1921. ... 281–282
55. Estimated Gross Agricultural Wealth of Canada, by Provinces, 1921 ... 283

International Agricultural Statistics.

56. Acreage and Production of Cereals and of Potatoes in Various Countries of the World, 1919 and 1920 ... 287–291
57. Numbers of Farm Live Stock in the Principal Countries of the World, dates nearest 1911 and 1921 ... 293–300
58. Numbers of Farm Live Stock in the British Empire, dates nearest 1911 and 1921 ... 301
59. World's Total Number of Farm Live Stock, dates nearest 1911 and 1921 ... 301

VIII. PRODUCTION—continued.

Agriculture—concluded.

Agricultural Experiment Stations of Canada.

		Page.
	Dominion Experimental Farms and Stations	301–305
60.	Dominion Experimental Farms and Stations, 1921	302
	Provincial Experimental Farms and Stations	305–310

Fur Trade.

61.	Numbers and Values of Pelts Purchased by Traders from Trappers and Fur Farmers, years ended June 30, 1920 and 1921	313
62.	Kind, Number, Total Value and Average Value of Pelts of Fur-bearing Animals taken in Canada, year ended June 30, 1921	313

Forestry.

63.	Summary Statistics of Forest Products, 1917–1920	317
64.	Quantities and Values of the cut of Lumber, Shingles and Lath, by Provinces, 1918, 1919 and 1920	317
65.	Total Consumption and Value of Pulpwood, 1909–20	318
66.	Quantities and Values of Wood used in the Manufacture of Pulp, 1918–20	318
67.	Kinds of Wood used in the Manufacture of Pulp by Quantities and Values, 1918, 1919 and 1920	318
68.	Quantities of Wood used and of Pulp manufactured, 1916–1920	319
69.	Tonnage and Value of the Various Kinds of Paper Produced in Canada, by Provinces, calendar year 1920	320
70.	Production of Paper by Provinces, 1917–20	320
71.	Exports from Canada of Wood Pulp, by Countries, in the fiscal years 1916–21	321
72.	Quantity and Value of Wood, Blocks and Other, for Pulp, exported to the United States, 1904–21	322

Fisheries.

73.	Number and Capital Value of Fishing Vessels, Boats, Nets, Traps, etc., used in the Fisheries of Canada, 1919 and 1920	327–328
74.	Number of Persons Employed in the Fisheries of Canada, 1919 and 1920	328
75.	Government Bounties to Fishermen in the fiscal years 1917 to 1920	328
76.	Quantities and Values of Sea Fish marketed in Canada during the calendar years 1919 and 1920	329–330
77.	Quantities and Values of Inland Fish marketed in Canada during the calendar years 1919 and 1920	331
78.	Yield of the Fisheries of Canada, compared as to Quantity and Value, for 1919 and 1920 ("000" omitted)	331
79.	Quantity and Value of Chief Commercial Fishes, fiscal year 1916–17, and calendar years 1917 to 1920	332
80.	Total Value of Fisheries, by Provinces, in the fiscal years 1916–1917 and calendar years 1917–1920	333
81.	Total Value of the Fisheries of Canada in the fiscal years 1870–1921	333
82.	Value of Exports and Imports of Fish and Fish Products, 1902–1921	333
83.	Exports of the Fisheries, the Produce of Canada, by principal countries, in the fiscal years 1920 and 1921	333–334
84.	Exports of the Fisheries, compared as to Quantity and Value, 1920 and 1921 ("000" omitted)	334

Minerals.

85.	Quantities and Values of Minerals produced in Canada, calendar years 1920 and 1921	337–338
86.	Increase or Decrease in Quantities and Values of Principal Mineral Products, for the Calendar Year 1920, as compared with 1919	339
87.	Mineral production of Canada, compared as to Quantity and Value, for Calendar Years 1919 and 1920 ("000" omitted)	339–340
88.	Value of Mineral Production in Canada, 1886–1921	340
89.	Value of Minerals produced in Canada, by Provinces, in the Calendar Years 1919, 1920 and 1921	341
90.	Quantity of Gold produced in Canada, by Provinces, during the Calendar Years 1901–1921	341
91.	Value of Gold produced in Canada, by Provinces, during the Calendar Years 1901-1921	341–342
92.	Quantity and Value of Silver produced in Canada during the Calendar Years 1887–1921	342
93.	Quantity and Value of Silver produced in Canada, by Provinces, during the Calendar Years 1901–1921	342–343
94.	Quantity and Value of Copper produced in Canada, by Provinces, during the Calendar Years 1901–1921	343
95.	Quantity and Value of Nickel produced in Canada during the Calendar Years 1889–1921	344
96.	Production of Principal Minerals in Canada, for the Calendar Years 1909–1921	344–345
97.	Production of Asbestos and Asbestic in Canada for the Calendar Years 1909–1921	345
98.	Production of Cement in Canada for the Calendar Years 1902–1921	345
	Iron Blast Furnaces in Canada in 1921	346
	Electric Furnaces in 1921	346
	Steel Furnaces in 1921	346
	Mines Departments of Provincial Governments	347–350
99.	Value of the Mineral Production of Quebec, 1900–1921	348

VIII. PRODUCTION—concluded.

Minerals—concluded.

PAGE.

100. Production of Silver at the Cobalt and Gowganda Camp, Ontario, 1904–1921 349
101. Value of Total Mineral Production of British Columbia, 1852–1921 350
102. Quantity and Value of Mineral Products in British Columbia for the Calendar Years 1919–1921 350
103. Quantity and Value of the World's Production of Gold and Silver for the Calendar Years 1919 and 1920 351–352
104. Imports into Canada of Portland Cement, 1898–1922 352
105. Imports into Canada of Anthracite and Bituminous Coal for home consumption during the fiscal years 1901–1922 353
106. Exports of Coal, the produce of Canada, 1903–1922 353
107. Annual Consumption of Coal in Canada, 1886–1921 354
108. Coal made available for Consumption in Canada, by Provinces, Calendar Year 1920 (short tons) 354–355

Manufactures.

109. Historical Summary of Statistics of Manufactures, by Provinces, 1870 to 1919 362–363
110. Summary Statistics of Manufactures of Canada, 1917, 1918 and 1919 363
111. Summary Statistics of Manufactures, by Groups of Industries, 1917, 1918 and 1919 364–365
112. Statistics of Number of Manufacturing Establishments, Capital, Cost of Materials and Value of Products, by Individual Industries, 1917, 1918 and 1919 366–375
113. Statistics of Number of Salary-Earning and Wage-Earning Employees, and of Salaries and Wages Paid in Manufacturing Establishments in Canada, by Individual Industries, 1917, 1918 and 1919 376–385
114. Statistics of Manufactures, by Cities and Towns of 5,000 Population and over, 1917–1919 386–389
115. Male and Female Employees on Salaries and Wages, by Provinces, 1919 389

Water Powers of Canada.

116. Developed and Available Water Power of Leading Countries 390
117. Available and Developed Water Power in Canada, March 1, 1922 391
118. Developed Water Power in Canada, March 1, 1922 392
119. Developed Water Power in Canada, Utilized in the Central Electric Station Industry, March 1, 1922 393
120. Developed Water Power in Canada Utilized in the Pulp and Paper Industry, March 1, 1922 393

IX. TRADE AND COMMERCE.

1. Aggregate External Trade of Canada, 1868–1922 398
2. Ratio of Exports to Imports and Value per capita of Exports, Imports and Total Trade, 1868–1922 399
3. Movement of Coin and Bullion, 1868–1918 400
4. Duties Collected on Exports, 1868–1892, and on Imports for Home Consumption, 1868–1922 401
5. Exports to the United Kingdom, to the United States and to Other Countries of Merchandise, the produce of Canada, 1868–1922 402
6. Imports from the United Kingdom, from the United States and from Other Countries of Merchandise entered for Home Consumption, 1868–1922 403
7. Percentage Proportions of Imports from United Kingdom and United States, respectively, to Totals of Dutiable and Free in the 22 fiscal years 1901–1922 404
8. Average ad valorem Rates of Duty collected on Imports from United Kingdom, United States and All Countries in the 55 fiscal years 1868–1922 404
9. Exports to the United Kingdom, to the United States and to All Countries, by Classes of Merchandise the Produce of Canada, by values and percentages, 1919–1922 405
10. Imports from the United Kingdom, from the United States, and from All Countries, by Classes of Merchandise entered for Home Consumption, by values and percentages, 1919–1922 406–407
11. Exports of Canada to United Kingdom, United States and All Countries, in quantities and values, by Classes of Home Produce in the four fiscal years 1919–1922 408–433
12. Imports of Canada, from the United Kingdom, the United States and All Countries, in quantities and values, by classes, entered for consumption in the four fiscal years 1919–1922 434–463
13. Imports (dutiable and free) and Exports of Canadian and Foreign Produce, by Main Classes, during the fiscal years ended March 31, 1917–1921 464–465
14. External Trade of Canada, by Main Groups and Degrees of Manufacture according to Origin, year ended March 31, 1921 466–467
15. Summary of the Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended March 31, 1921 467–471
16. Values of Exports (domestic and foreign) to the British and Foreign West Indies, by Countries, during the fiscal years 1920–1922 472
17. Values of Imports entered for home consumption (dutiable and free) from the British and Foreign West Indies, by Countries, during the fiscal years 1920–1922 472
18. Value of Imports and Exports from and to British and Foreign West Indies, 1901–1922 473
19. Imports of certain Articles of Raw Materials for Home Consumption, 1902–1922 473–474
20. Value of Total Exports and Imports entered for Consumption, and the Duty Collected thereon, at certain Ports, during the fiscal years ended March 31, 1920 and 1921 474–475

IX. TRADE AND COMMERCE—concluded.

PAGE.

21. Imports of Canada by values entered for consumption from British Empire and Foreign Countries, under the General, Preferential, and Treaty Rate Tariffs in the two fiscal years, 1920–1921 ... 476
22. Aggregate Trade of Canada by Countries for the fiscal year ended March 31, 1922 .. 476–477

26. Quantities and Values of Selected Animal and Agricultural Food Products imported into the United Kingdom, by Countries whence imported, during the five calendar years 1916–1920 ... 481–484
27. Quantities and Values of Animal and Agricultural Products exported from the United States to Principal Countries for the years ended June 30, 1916, 1917, and the calendar years 1918, 1919 and 1920 ... 485–503

Grain Statistics.

28. Number and Storage Capacity of Canadian Grain Elevators in the license years 1901–1922 ... 507–509
29. Quantities of Grain inspected during the fiscal years 1920–1922 ... 510–512
30. Quantities of Grain inspected during the fiscal years ended March 31, 1914–1922 ... 513–514
31. Shipments of Grain by vessels from Fort William and Port Arthur for the navigation seasons 1920 and 1921 ... 514
32. Shipments of Grain by vessels and all-rail route from Fort William and Port Arthur for the crop years ended August 31, 1920 and 1921 ... 515

Bounties.

33. Bounties paid in Canada on Crude Petroleum, 1905–1921 ... 515
The Commercial Intelligence Service ... 516

Patents, Copyright, Trade Marks, Etc.

34. Number of Canadian Patentees, by Province of Residence, for the fiscal years 1912–1921 ... 517
35. Number of Electric Light and Power Companies registered under the Electricity Inspection Act in the Fiscal Years 1913–1921 ... 520
36. Electrical Energy generated or produced for Export in Canada under authority of the Electricity and Fluid Exportation Act during the Fiscal Years 1916–1921 ... 520
37. Electrical Energy Generated in 1919 and 1920, by Provinces ... 521

X. TRANSPORTATION AND COMMUNICATIONS.

Steam Railways.

The Board of Railway Commissioners for Canada ... 528–530
1. Record of Steam Railway Mileage, June 30, 1835–1919, and Dec. 31, 1919–1920 ... 532
2. Steam Railway Mileage by Provinces, June 30, 1914–1919, and Dec. 31, 1919–1920 ... 533
3. Capital Liability of Steam Railways, June 30, 1876–1919, and Dec. 31, 1919–1920 ... 533
4. Mileage, Capital Liability, Earnings and Operating Expenses of Steam Railways for the Calendar Year 1920 ... 534
5. Steam Railway Statistics, years ended June 30, 1901–1919, and for Calendar Years 1919 and 1920 ... 535
6. Earnings and Operating Expenses of Steam Railways per mile of line and per train mile, for the years ended June 30, 1909–1919, and for Calendar Years 1919–1920 .. 535
7. Distribution of Operating Expenses of Steam Railways for years ended June 30, 1918 and 1919, and for Calendar Years 1919 and 1920 ... 536
8. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, 1910–1920 ... 536–537
9. Number of Steam Railway Employees, Amount of Salaries and Wages, and Ratios of the latter to Gross Earnings and Operating Expenses, for years ended June 30, 1907–1919, and for Calendar years 1919–1920 ... 537
10. Mileage and Rolling Stock of Steam Railways for years ended June 30, 1916–1919, and for Calendar Years 1919–1920 ... 537–538
11. Commodities hauled as Freight on Steam Railways for years ended June 30, 1917–1919, and the Calendar Year 1919 ... 538–539
12. Commodities hauled as Freight on Steam Railways during the Calendar Year 1920 .. 539
13. Areas of Land Subsidies granted to Steam Railways by the Dominion and Provincial Governments up to December 31, 1920 ... 540
14. Analysis of the Total Financial Aid given to Steam Railways up to Dec. 31, 1920 ... 540
15. Aid to Railways in the form of Guarantees of Bonds, Interest, etc., by the Dominion and Provincial Governments up to Dec. 31, 1920 ... 540
16. Cost of Construction, Working Expenses and Revenue of Government Railways, for the fiscal years 1868–1900, 1901–1921, and before Confederation ... 541
17. Capital Expenditure by Dominion Government for construction of Government Steam Railways to March 31, 1921 ... 541
18. Number of Passengers, Employees and others killed and injured on Steam Railways for the years ended June 30, 1888–1919, and for calendar years 1919–1920 ... 542
19. Number of Persons Killed and Injured on Steam Railways, year ended June 30, 1919, and for the calendar years 1919 and 1920 ... 542–543

X. TRANSPORTATION AND COMMUNICATIONS—continued.

Electric Railways.

PAGE

20. Summary Statistics of Electric Railway Operation, years ended June 30, 1901–1919, and for calendar years 1919–1920 544
21. Mileage and Equipment of Electric Railways for the year ended June 30, 1919, and for calendar years 1919–1920 545
22. Capital Liability of Electric Railways, years ended June 30, 1908–1919, and for calendar years 1919–1920 545
23. Mileage, Capital, Earnings and Operating Expenses of Electric Railways, year ended December 31, 1920 545–546
24. Number of Passengers, Employees and others Killed and Injured on Electric Railways, years ended June 30, 1894–1919, and for calendar years 1919–1920 546

Motor Vehicles.

25. Speed Limits in miles per hour for Motor Vehicles, by Provinces 551
26. Number of Motor Vehicles registered in Canada, by Provinces, 1907–1921 552
27. Types of Motor Cars registered in Canada, by Provinces, 1921 552

Express Companies.

28. Operating Mileage of Express Companies in Canada, by Routes, by Provinces and by Companies, for the years ended June 30, 1918–1919, and for the calendar years 1919 and 1920 554
29. Earnings of Express Companies for the years ended June 30, 1915–1919, and for the calendar years 1919 and 1920 555
30. Operating Expenses of Express Companies for the years ended June 30, 1915–1919, and for the calendar years 1919 and 1920 555–556
31. Business transacted by Express Companies in financial paper for the years ended June 30, 1918–1919, and for the calendar years 1919 and 1920 556

Canals.

32. Canals of Canada, Length and Lock Dimensions, 1921 559
33. Canal Traffic during the Navigation Seasons of 1920 and 1921, by direction and origin of Cargo 560
34. Distribution of Total Canal Traffic, by months, 1916–1921 561
35. Tonnage of Traffic by Canals and Classes of Products, 1920–1921 561
36. Principal Articles carried through Canadian Canals during the Navigation Seasons, 1920 and 1921 561–562
37. Traffic through the Canadian Sault Ste. Marie Canal during the Navigation Seasons, 1900–21, by Nationality of Vessel and Origin of Freight 562
38. Traffic through all Canadian Canals during the Navigation Seasons 1900–1921, by Nationality of Vessel and Origin of Freight 563
39. Traffic through individual Canadian Canals during the Navigation Seasons 1914–1921 563–565
40. Total Expenditure and Revenue of Canals, 1868–1921, and before Confederation 565
41. Capital Expenditure for Construction and Enlargement of Canals, 1868–1921 and before Confederation 566
42. Traffic through the Panama Canal by Nationality of Vessels for the years ended June 30, 1918–1921 566
43. Traffic through the Panama Canal, August 1914 to June, 1921 567

Shipping.

44. Sea-going Vessels (exclusive of Coasting Vessels) Entered and Cleared at Canadian Ports during the fiscal years 1920 and 1921 571–572
45. Sea-going Vessels entered and Cleared at the Principal Ports of Canada, 1921 572–573
46. Sea-going Vessels Entered Inwards and Outwards, by Countries, 1921 573–574
47. Sea-going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, 1901–1921 574
48. Sea-going and Inland Vessels (exclusive of Coasting Vessels) arrived at and departed from Canadian Ports, 1901–1921 575
49. British and Foreign Vessels employed in the Coasting Trade of Canada, 1917–1921 575–576
50. Canadian and American Vessels trading on Rivers and Lakes between Canada and United States, exclusive of ferriage, 1917–1921 576
51. Vessels built and registered in Canada and Vessels sold to other Countries, 1901–1921 577
52. Number and Net Tonnage of Vessels on the Registry of Shipping, Canada, calendar years 1916–1920 577
53. Steamboat Inspection during the fiscal year 1919–1920 578
54. Number of Seamen Shipped and Discharged at Canadian Ports, calendar years 1908–1920 578
55. Canadian Wrecks and Casualties, for 1870–1900, for the years ended June 30, 1901–1917, and for the calendar years 1918–1920 579
56. Comparative Statement of Marine Danger Signals, 1911–1921 579
57. Revenue of the Department of Marine, 1916–1921 579
58. Expenditure of the Department of Marine, 1916–1921 580
59. Total Revenue and Expenditure of the Department of Marine, 1868–1921 581

Telegraphs.

60. Summary Statistics of all Canadian Telegraphs, for calendar years 1919 and 1920 582
61. Telegraph Statistics of Chartered Companies, June 30, 1911–1919, and for the calendar years 1919 and 1920 583–584
62. Coast Stations for Communication by Wireless Telegraphy with Ships at Sea, fiscal year 1920–21 585–586

X. TRANSPORTATION AND COMMUNICATIONS—concluded.

Telegraphs—concluded.

PAGE.

63. Canadian Government Steamers equipped with the Radiotelegraph, fiscal year 1920–21 ... 586
64. Business and Cost of Maintenance of Radiotelegraph Stations for the fiscal years 1919–1920 and 1920–1921 ... 586

Telephones.

65. Progress of Telephones in Canada for the years ended June 30, 1916–1919, and for the calendar years 1919 and 1920 ... 588
66. Number of Telephone Companies reporting to the Department of Railways and Canals, by Provinces, December 31, 1920, with totals for the years ended June 30, 1911–19, and Dec. 31, 1919 and 1920 ... 588
67. Telephones in use, Mileage of Wire and Number of Employees, by Provinces, December 31, 1920, with totals for the years ended June 30, 1911–19, and Dec. 31, 1919 and 1920 ... 589
68. Capital Liability, Cost, Revenue, and Operating Expenses of Telephones, Dec. 31, 1920, with totals for the years ended June 30, 1912–19, and Dec. 31, 1919 and 1920 .. 589

Postal Statistics.

69. Number of Post Offices in operation in the several Provinces of Canada, March 31, 1921 ... 592
70. Statistics of Gross Postal Revenue of Offices collecting $10,000 and upwards, for the fiscal years 1920 and 1921 ... 592–594
71. Revenue and Expenditure of the Post Office Department for the quinquennial years 1890–1910 and for the years 1911–1921 ... 594
72. Mail Subsidies and Steamship Subventions, 1919–1921 ... 594–595
73. Operation of the Money Order System in Canada, 1901–1921 ... 595
74. Money Orders by Provinces, 1917–1921 ... 596
75. Number and Total Values of Postal Notes, 1916–1921 ... 597
76. Issue of Postage Stamps, etc., fiscal years 1920 and 1921 ... 597

XI. LABOUR, WAGES AND PRICES.

Occupations of the People.

1. Persons engaged in Gainful Occupations in Canada, by Ages, 1911 ... 599

Reconstruction in Canada. By S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., Editor Canada Year Book, Dominion Bureau of Statistics, Ottawa	1920	1–64

ERRATA.

Page 9. Line 5. The index figure "1" referring to foot-note, should be inserted here after the word "Council" instead of in line 24.

Page 159. Twelve male and two female students of Queen's University, are erroneously entered as in Veterinary Medicine instead of in Theology. The totals in the theological faculties of all universities should therefore be 664 males and 7 females, and in the faculty of veterinary medicine 20 males.

Page 301. In table 58, the proportion of asses in the British Empire to the world total at the date nearest 1921, should be 25·4 instead of 20·7 p.c.

Page 663. In Table 7, last line but one, Business War profits tax revenue in 1921 yielded $40,841,401.25, not $48,841,401.25.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA.

Area of the Dominion of Canada in square miles:—Land, 3,603,910: Water, 125,755: Total, 3,729,665.

NOTE.

In the foregoing Summary the statistics of immigration, fisheries (1871–1917), trade, shipping, the Post Office, the public debt, revenue and expenditure and the Post Office and Government Savings Banks relate to the fiscal years ended June 30 up to 1906, and from that on to the years ended March 31. Agricultural, dairying, fisheries (1917–21), mineral, manufacturing, banking, insurance, loan and trust companies' statistics relate to the calendar years and railway statistics to the years ended June 30, 1871–1919, and to the calendar years 1920 and 1921. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

I.—THE CONSTITUTION AND GOVERNMENT OF CANADA.

By S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., Editor Canada Year Book, Dominion Bureau of Statistics, Ottawa.

The Dominion of Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand and the island colony of Newfoundland (with Labrador). These Dominions enjoy responsible government of the British type, administered by Executive Councils (or Cabinets) acting as advisors to the representative of the Sovereign, themselves responsible to and possessing the confidence of the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist.

Of these Dominions, Canada, Australia and South Africa extend over enormous areas of territory, the first two approximating in area to Europe. Each section has its own problems and its own point of view, so that local parliaments for each section, as well as the central parliament for the whole country, are required. These local parliaments, established when transportation and communication were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case of Australia, or surrendered all their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six and South Africa four.

As regards the division of powers between central and local legislatures, Canada stands midway between the two more recently formed federations of the Empire. The founders of the Dominion of Canada, constituted as it was under the shadow of the great Civil War in the United States, aimed at settling once for all the issues of State rights, State sovereignty and the right of the State to secede from the Union, which had occasioned so much bloodshed in the neighbouring republic. They created, therefore, a strong federation where the residue of power appertained to the central rather than to the local authorities and where the central power could legally disallow, in the general interest of Canada, the legislation of the local Parliaments, even when these were admittedly acting within their reserved powers.

It is a curious paradox of political science that whereas in Canada, a bi-lingual country inhabited by peoples of different races and religions, it should have been possible to establish a strong central government, the founders of the Commonwealth of Australia, which had a practically homogeneous population throughout the six States of the Commonwealth, should only have been able to establish a relatively weak federation of the American type with the residual powers in the hands of the States, among which all surplus Commonwealth revenue was to be divided.

Again, in the South African federation, also formed in a bilingual country where the white population of one province was almost altogether British, of another almost wholly Dutch, of the other two nearly equally divided, we find a strong federation where the powers of local governments are more restricted than in our own country. The decisive factor necessitating the formation of a strong, central Government seems to have been the presence in South Africa of a native population vastly outnumbering the whites.

Besides the Dominions above enumerated, the Irish Free State may now (1922) be said to possess full Dominion status, while the six counties of Northeast Ulster may also be regarded as a separate self-governing colony. The great Empire of India has internationally been accepted as a member of the League of Nations, and in its internal administration has been placed on the road, formerly traversed by the Dominions which are now fully self-governing, towards responsible government. Indeed, the whole evolution of the Empire, throughout all its parts which are more than mere fortresses like Gibraltar or trading stations like Hong Kong, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It is the recognized aim of British administrators, by the extension of educational facilities and by just administration, to develop these capacities to the utmost, so that in the dependencies, as well as in the Dominions and in the Mother Country, the constitutional history of the future may be a record of "freedom slowly broadening down from precedent to precedent."

It is the purpose of this article to relate as briefly as possible, the process of this development of free government in the Dominion of Canada.

The French Régime.—The settlement of Canada commenced at a time when the extension of European trade and commerce throughout the world was being mainly carried on by Chartered Companies of merchants belonging to various nations, more particularly England, France and Holland. These Companies each tried to monopolize the trade of the regions in which they established themselves, receiving from their sovereign charters which, theoretically at least, gave them a monopoly so far as their compatriots were concerned, while against foreign competition they maintained their position with the sword, even when their respective mother countries, thousands of miles and months of time distant, were at peace. Among such companies of this period were the English and Dutch East India Companies, the Guinea Company, the Russia Company, the Virginia Company, and a little later, the Hudson's Bay Company. Similarly we find in the earliest stage of French enterprise in Canada that several short-lived companies successively possessed a monopoly of trade and employed such men as Champlain as governors and explorers of the opportunities of the new territories. The charters

of these companies were, however, cancelled for violation of their terms, and at last in 1627, the monopoly of trade and the right to make grants of land was conferred upon the Company of One Hundred Associates, in consideration of its undertaking to settle the country and support missionaries to christianize the Indians. Governmentally, therefore, the first stage in Canadian history may be said to have been the autocratic government of a trading company. This company, however, failed to live up to its agreement and its charter was cancelled in 1663, when Canada became a royal province, governed like an ordinary French province of those days, by a Governor to whom as personal representative of the King, were entrusted the general policy of the country, the direction of its military affairs and its relations with the Indian tribes. The Bishop, as the head of the Church, was supreme in matters affecting religion, and the Intendant, acting under the authority of the King, not of the Governor, was responsible for the administration of justice, for finance and for the direction of local administration. A Superior Council also existed, with certain administrative powers which were more formal than real. This system continued until the end of the French régime.

The English Colony.—From the capitulation of Quebec on Sept. 18, 1759, and of Montreal on Sept. 8, 1760, to the signature of the Treaty of Paris on Feb. 10, 1763, Canada was ruled by British military officers who instituted courts which applied French law, and administered the country as an occupied territory, the final disposition of which was as yet unsettled.

Upon the final surrender of the country by France under the Treaty of Paris, a Royal Proclamation of Oct. 7, 1763, defined the frontiers of the new Province of Quebec, and provided that as soon as circumstances would admit, General Assemblies should be summoned, with power to enact laws for the public welfare and good government of the colony. In the meantime, Courts were constituted for "dealing with civil and criminal cases according to the laws of England," with an appeal to the Privy Council. Under the Quebec Act of 1774, passed with the purpose of conciliating the new colonies at a time when the old colonies were falling off from their allegiance, the use of the old French civil law was resumed, while English criminal law continued to govern throughout the Province of Quebec, which was now extended to the banks of the Ohio and the Mississippi. These boundaries were, however, abandoned at the Treaty of Versailles, 1783, when the Great Lakes became the dividing line. The influx of the United Empire Loyalists, English-speaking people accustomed to English laws, necessitated the division of the colony and the establishment of representative institutions. The Constitutional Act was passed in 1791, dividing the Canada of those days (the St. Lawrence valley) into two provinces, establishing in each province a nominated Legislative Council and an elective Legislative Assembly. Under this Act, upon which the government of Canada was based throughout half a century, "the Executive was (through Crown revenue and military grants from the Home Government) financially, and worse still,

constitutionally independent, and the House of Assembly, in seeking vaguely to cure a disease which it had not in reality diagnosed, frequently overstepped its sphere, with the result that it was dissolved time after time."—(Lefroy, Constitutional Law of Canada, pp. 20-21).

The Constitutional Act was at first accepted as an improvement on the previously existing method of Government, but as time went on, the increasing population and wealth of the provinces, combined with the narrow and selfish policy of the privileged few, led to frequent clashes between the Executive and the Assembly, complicated in Lower Canada by the difference of races. In 1837, a rebellion in each province, though speedily stamped out, led to the appointment of Lord Durham by the Home Government as a special commissioner clothed with more extensive powers than had ever before been held by a representative of the Crown in British North America, as he was governor-in-chief of the five provinces of Upper Canada, Lower Canada, New Brunswick, Nova Scotia and Prince Edward Island, high commissioner for the adjustment of certain important questions respecting the form of and the future government of Upper and Lower Canada, and high commissioner and governor-general of all the provinces on the continent, and of Prince Edward Island and Newfoundland.

The famous report made by Lord Durham to Parliament is almost universally regarded as the greatest political document in our history. He saw clearly the necessity of re-establishing harmony between the executive and the legislative branches of the government by making the former, as in England, responsible to the latter. He insisted also upon the desirability of establishing a free democratic system of municipal government, by participation in which citizens would secure a training which would be of use in fitting them for the wider duties of public life. Upper and Lower Canada were to be united under a single Parliament, and in the Act provision was to be made for the voluntary admission to the union of the other British North American Provinces.

While Lord Durham was disavowed by the Home Government, his report formed the basis of the Act of Union of 1841, which united Upper and Lower Canada under a single Parliament, in which each province was equally represented. This equality of representation, applied to provinces of differing race, religion and institutions, finally became unworkable; deadlock became the parent of Confederation, under which each province could legislate on its own local affairs, while a common Parliament was established for all the provinces agreeing to come into Confederation.

Confederation.—While suggestions for the union of the British North American provinces date as far back as 1789, the first legislative action looking to this end was taken by the Assembly of Nova Scotia in 1861. In 1864 delegates from Nova Scotia, New Brunswick and Prince Edward Island assembled in Charlottetown to confer in reference to a union of these provinces. A second convention, at which the province of Canada was represented, met in Quebec on Oct. 10,

1864, at which seventy-two resolutions, which afterwards formed the basis of the British North America Act, were adopted and referred to the respective legislatures for their concurrence, which was finally given. The British North America Act received the Royal Assent on March 29, 1867, and came into force on July 1 of that year.

Constitution of Canada.—In the preamble to the British North America Act it is stated that the provinces of Canada, Nova Scotia and New Brunswick "have expressed their desire to be federally united into one Dominion, with a Constitution similar in principle to that of the United Kingdom." This declaration throws a flood of light upon our form of government. Our constitution is not an imitation of that of the United States, it is the British Constitution federalized. Like the British and unlike the American Constitution, it is not a written constitution. The many unwritten conventions of the British Constitution are also recognized in our own; what we have in the British North America Act is a written delimitation of the respective powers of the Dominion and Provincial Governments, and an enactment of the terms of the Confederation Agreement. The British North America Act simply divides the sovereign powers of the State between the provincial and the central authorities.

The British North America Act declares that the executive government of Canada shall continue to be vested in the sovereign of the United Kingdom (sec. 9), represented for federal purposes by the Governor-General, just as for provincial purposes by the Lieutenant-Governor. The Governor-General is advised by the King's Privy Council of Canada, a committee of which constitutes the ministry of the day.

The Dominion Parliament consists of the King, the Senate and the House of Commons. It must meet at least once a year, so that twelve months do not elapse between the last meeting in one session and the first meeting in the next. Senators, 96 in number, who are appointed for life by the Governor-General in Council, must be 30 years of age, British subjects, residents of the province for which they are appointed, and possess $4,000 over and above their liabilities. Members of the House of Commons (235 in 1921, but subject to increase as a result of the census of that year), are elected by the people for the duration of the Parliament, which may not be longer than five years. The Speaker of the Senate is chosen by the Governor-General in Council, the Speaker of the House of Commons by the members of that House. In the Senate, 15 constitute a quorum, in the House of Commons, 20.

Dominion Finance.—Among the most important provisions of the British North America Act are those relating to the appropriation of public money and the raising of taxes for Dominion purposes. The House of Commons has the sole right of initiating grants of public money and of directing and limiting appropriations, yet the House of Commons must not (sec. 54) adopt or pass any vote, bill, resolution or address for the payment of any part of the public funds for any

purpose that has not first been recommended to the House by message from the Governor-General in Council during the session in which such vote or bill is proposed. This rule is of the most vital importance in promoting public economy, as it eliminates all possibility of private members combining to secure expenditures of public money in their constituencies, and leaves to the executive authority the initiation of all legislation requiring the expenditure of public funds. This rule is also operative in the Provincial Legislatures.

Powers of Parliament.—The powers of the Dominion Parliament include all subjects not assigned exclusively to the provincial legislatures. More especially, under section 91 it has exclusive legislative authority in all matters relating to the following: public debt and property; regulation of trade and commerce; raising of money by any mode of taxation; borrowing of money on the public credit; postal service; census and statistics; militia, military and naval service and defence; fixing and providing for salaries and allowances of the officers of the government; beacons, buoys and lighthouses; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea-coast and inland fisheries; ferries on an international or interprovincial frontier; currency and coinage; banking, incorporation of banks, and issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by this Act exclusively assigned to the legislatures of the Provinces.

Powers of Provincial Legislatures.—Under section 92, the Legislature in each Province may exclusively make laws in relation to the following matters: amendment of the constitution of the Province, except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the Province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licenses issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Dominion Parliament to be for the general advantage

either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province, including the constitution, maintenance and organization of provincial courts both of civil and criminal jurisdiction, and including procedure in civil matters in these courts; the imposition of punishment by fine, penalty, or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Education.—Further, in and for each province the Legislature may, under section 93, exclusively make laws in relation to education, subject to the following provisions.—

> "(1) Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province at the union.
>
> (2) All the powers, privileges and duties at the union by law conferred and imposed in Upper Canada on the separate schools and school trustees of the Queen's Roman Catholic subjects shall be and the same are hereby extended to the dissentient schools of the Queen's Protestant and Roman Catholic subjects in Quebec.
>
> (3) Where in any province a system of separate or dissentient schools exists by law at the union or is thereafter established by the legislature of the province, an Appeal shall lie to the Governor-General in Council from any act or decision of any provincial authority affecting any right or privilege of the Protestant or Roman Catholic minority of the Queen's subjects in relation to education.
>
> (4) In case any such provincial law as from time to time seems to the Governor-General in Council requisite for the due execution of the provisions of this Section is not made, or in case any decision of the Governor-General in Council on any appeal under this Section is not duly executed by the proper provincial authority in that behalf, then and in every such case, and as far only as the circumstances of each case require, the Parliament of Canada may make remedial laws for the due execution of the provisions of this Section and of any decision of the Governor-General in Council under this Section."

The purpose of these sections was to preserve to a religious minority in any province the same privileges and rights in regard to education which it had at the date of Confederation, but the provincial legislatures were not debarred from legislating on the subject of separate schools provided they did not thereby prejudicially affect privileges enjoyed before Confederation by such schools in the province.

As to the legal and other controversies affecting these questions, the student may consult Hansard between 1890 and 1897, "Wheeler's Privy Council Cases," pp. 370 to 388, Supreme Court Reports, Vol. 19, and other authorities of a like nature.

Judicature.—The appointment, salaries and pensions of judges are dealt with under sections 96 to 101. The judges, (except in the courts of probate in New Brunswick and Nova Scotia) are to be appointed by the Dominion Government from the Bars of their respective provinces, and to hold office during good behaviour, being

removable by the Governor-General only on address of the Senate and House of Commons. Their salaries are to be fixed and provided by Parliament.

Under the provisions of section 101, empowering Parliament to establish a general Court of Appeal, the Dominion Parliament passed in 1875 an Act to establish a Supreme Court and Court of Exchequer for the Dominion (38 Vict., Chap. II). In 1877, however, these courts were separated and the Exchequer Court of Canada, with one judge, a registrar, and other proper officers, was established. An additional judge was added to this court in 1912.

The Supreme Court of Canada has appellate jurisdiction from all the courts of the provinces, and questions may be referred to it by the Governor-General in Council. It has also jurisdiction in certain cases between the provinces, and in cases of controversies between provinces and the Dominion. While its judgment is final in criminal cases, there is in civil cases, subject to certain limitations, an appeal to the Judicial Committee of the Privy Council in England, which also entertains appeals direct from the provincial Courts of Appeal. The decisions of the Supreme Court and of the Judicial Committee of the Privy Council constitute the case-law of our constitution, the legal interpretation of the constitution and of the varied powers of the Dominion and provincial legislatures.

Finance.—Part VIII of the British North America Act deals with public finance. Generally, the revenues which had previously accrued to the treasuries of the provinces were now transferred to the Dominion, notably the custom duties. The public works, cash assets and other property of the provinces, except lands, mines, minerals and royalties, also became Dominion property. In its turn, the Dominion was to become responsible for the debts of the provinces. Since the main source of the revenues of the provinces, customs duties, was now taken over by the Dominion, the Dominion was to pay annual subsidies to the provinces for the support of their governments and legislatures. These subsidies have from time to time been increased.

Miscellaneous.—Among the miscellaneous provisions contained in Part IX of the British North America Act, are sections providing for the retention of existing legislation of the provinces in force until repealed, the transfer of existing officials to the Dominion, and the appointment of new officials. The Parliament of Canada was also given power necessary to perform treaty obligations of Canada, as a part of the British Empire, towards foreign countries.

Under section 133, either the English or the French language may be used by any person in the debates of the Houses of Parliament or of the Houses of the Legislature of Quebec, all Acts of which bodies are to be printed in both languages. Either language, too, may be used by any person in any court of Canada established under the Act, or in the Courts of Quebec.

Veto Power.—Under section 56, it is provided that Acts of the Dominion Parliament, after receiving the assent of the Governor-General, may within two years be disallowed by the Sovereign in

Council. Similarly Acts of the Provincial Legislature, after receiving the assent of the Lieutenant-Governor, may be disallowed within one year by the Governor-General in Council.

This veto power on Dominion legislation has practically never been exercised by the Sovereign in Council. In the case of controversies between the Dominion and the Provinces, while the veto power has been exercised in the past, the whole present tendency is to let the matter be decided by the courts rather than disallow by an executive act legislation duly passed by the elected representatives of the people in the provincial legislatures. The argument is that if such legislation is annulled as *ultra vires* of the Provincial legislature, then the Dominion Government, an executive body, has made itself the judge in its own case, which could be more properly decided by the courts; if legislation, admittedly *intra vires* of the provincial legislature, is annulled, on the ground of its immorality or unwisdom, then the annulling power has set itself up as an authority on morality and wisdom. The Dominion Minister of Justice, in 1909, on the question of disallowing the Ontario legislation with respect to the Hydro-Electric Power Commission, stated the case as follows:—

> "In the opinion of the undersigned, a suggestion of the abuse of power, even so as to amount to practical confiscation of property, or that the exercise of a power has been unwise or indiscreet, should appeal to your Excellency's government with no more effect than it does to the ordinary tribunals, and the remedy in such case is an appeal to those by whom the legislature is elected."[1]

CONSTITUTIONAL DEVELOPMENTS SINCE CONFEDERATION.[2]

Since no attempt was made in the British North America Act to define the relations between the British and the Canadian Governments, those relations have necessarily passed and are still passing through a stage of gradual development in which they are influenced to a remarkable extent by custom and convention and the creation of "new conventions of the Constitution." From the very commencement of our history as a nation there has been a gradual development of the powers of the Canadian Government, accompanied by a more liberal attitude on the part of British statesmen, which has been largely due to the more advanced ideas of government which have permeated the administration of the mother country itself. In 1876, for example, the then Colonial Secretary proposed to issue permanent instructions to the Governor-General providing that the latter should preside at meetings of the Council (a right which in the case of the Sovereign had long fallen into desuetude); that he might dissent from the opinion of the major part or of the whole; and that in the exercise of the pardoning power in capital cases, he was to receive

[1] This right has only been exercised in one rather technical case. In 1873 an Act of the Dominion Parliament empowered any committee of the Senate or House of Commons to examine witnesses upon oath when so authorized by resolution. "There was a confusion of opinion as to the competency of Parliament to enact it. The law officers of the United Kingdom eventually advised that the Act was *ultra vires*, and it was accordingly disallowed for that reason and not upon considerations of policy."—Borden, Canadian Constitutional Studies, p. 65.

[2] In this part of the article, considerable use has been made of Sir Robert Borden's recently published volume, "Canadian Constitutional Studies."

the advice of ministers, but to extend or withhold pardon or reprieve according to his own judgment (one of the last prerogatives to disappear in the case of the Sovereign). The then Canadian Minister of Justice, Hon. Edward Blake, secured in 1878 the issuance of a new set of instructions, in which the only provision that the Governor-General might act except on the advice of Ministers related to the exercise of the pardoning power, providing that in cases where a pardon or reprieve might affect Imperial interests, the Governor-General should take these interests into his personal consideration in conjunction with the advice of his Ministers.

The development of inter-Imperial relations up to the Great War may be studied in the records of the Colonial Conference. In the first Colonial Conference of 1887, we have a purely consultative gathering in calling which the chief aim of the British Government was probably to devise a method of more effective co-operation in defence. After a second, but constitutionally unimportant Conference had been held in Ottawa in 1894, the third Colonial Conference, attended only by Prime Ministers, was held in London in 1897, and the fourth, which Dominion Ministers attended to assist their Prime Ministers, in London in 1902. At the latter Conference a resolution was passed favouring the holding of such Conferences at intervals not exceeding four years at which "questions of common interest could be discussed and considered as between the *Colonial Secretary* and the Prime Ministers of the self-governing Colonies. In 1905 the Colonial Secretary, Mr. Lyttleton, suggested to the Dominion that the Colonial Conference should be changed into an Imperial Council, consisting of the Colonial Secretary and the Prime Ministers or their representatives. On Canada objecting to the use of the term "Council" the name was changed to "Imperial Conference." In 1907 the first "Imperial Conference" assembled; by an extraordinarily significant change, it was provided that future Conferences should be between the Government of the United Kingdom and the Governments of the self-governing Dominions, and that the *Prime Minister* of the United Kingdom (not the Colonial Secretary) was to be *ex officio* President of the Conference, while the Prime Ministers of the Dominions and the Colonial Secretary were to be *ex officio* members. This was a move toward recognizing that the Home Government was simply *primus inter pares* among the nations of the Empire. The Conference of 1911 met under this arrangement, and in 1912 the British Government gave Canada an assurance that a Dominion Minister resident in London would be regularly summoned to all meetings of the Committee of Imperial Defence and that no important step in foreign policy would be taken without consultation with such representatives. In 1917 there was evolved what was known as the Imperial War Cabinet, a gathering of the five members of the British War Cabinet and the Prime Ministers of the self-governing Dominions.

A resolution on the question of future constitutional relations passed unanimously at this Conference is of profound significance. It was as follows:—

"The Imperial War Conference are of opinion that the readjustment of the constitutional relations of the component parts of the Empire is too important and intricate a subject to be dealt with during the war, and that it should form the subject of a special Imperial Conference to be summoned as soon as possible after the cessation of hostilities.

"They deem it their duty, however, to place on record their view that any such readjustment, while thoroughly preserving all domestic affairs, should be based upon a full recognition of the Dominions as autonomous nations of an Imperial Commonwealth, and of India as an important portion of the same, should recognize the right of the Dominions and India to an adequate voice in foreign policy and in foreign relations, and should provide effective arrangements for continuous consultation in all important matters of common Imperial concern, and for such necessary concerted action, founded on consultation, as the several Governments may determine."

In regard to the first paragraph of the above, the 14th resolution of the Conference of 1921 stated that "having regard to the constitutional developments since 1917, no advantage is to be gained by holding a constitutional Conference." This sentence undoubtedly had reference to the consultation of the Dominions in regard to the terms of peace and their membership in the League of Nations. On Oct. 29, 1918, the question of representation of the Dominions in the peace negotiations was raised by the Prime Minister of Canada in a despatch to the Prime Minister of the United Kingdom. The Imperial War Cabinet eventually accepted the proposal, but when the question came before the Peace Conference at Paris on January 12, 1919, strong opposition was encountered. This opposition, however, was finally overcome. Through a combination of the panel system, by which the representatives of the British Empire might be selected from day to day as the nature of the subject demanded, with distinctive representation of each Dominion, the Dominions secured effective representation, and took no inconsiderable part in the Conference.

As a natural development of this representation came the signature by the Dominion plenipotentiaries of the various treaties concluded at the Conference, the submission of these treaties for the approval of the Dominion Parliaments, and the appearance of the Dominions as Signatory Powers. Further, the Dominions claimed that they should be accepted as members of the new League of Nations, and represented on its Council and Assembly. This claim was finally accepted, and the status of the Dominions as to membership and representation in the Assembly is precisely the same as that of other signatory members. As to representation on the Council, the Prime Minister of Canada obtained from President Wilson and Messrs. Clemenceau and Lloyd George, a signed declaration that "upon the true construction of the first and second paragraphs of that Article, representatives of the self-governing Dominions of the British Empire may be selected or named as members of the Council." At the first Assembly of the League of Nations at Geneva, from Nov. 15 to Dec. 18, 1920, Canada was represented by the Rt. Hon. Sir Geo. E. Foster, the Rt. Hon. Chas. Jos. Doherty and Hon. N. W. Rowell, the first of whom acted as a Vice-President of the Assembly.[1]

[1]An account of the proceedings of this first Parliament of the Nations was given on pages 738 to 742 of the 1920 edition of the Year Book.

The participation of Canada in the Peace Treaty and in the League of Nations made it necessary for an official definition of Canadian nationals and Canadian nationality to be made, since among different measures adopted in connection with the operations of the League of Nations, were provisions defining certain rights and privileges to be enjoyed by the nationals of members of the League. A Canadian national was accordingly defined by 11-12 George V, chap. 4, as:

(a) any British subject who is a Canadian citizen[1] within the meaning of The Immigration Act, chapter 27 of the Statutes of 1910, as heretofore amended;

(b) the wife of any such person;

(c) any person born out of Canada, whose father was a Canadian national at the time of that person's birth, or with regard to persons born before the passing of this Act, any person whose father at the time of such birth, possessed all the qualifications of a Canadian national as defined in this Act.

In the debates on this Act it was thoroughly established that its effect was not in any way to supersede the term "British subject," but to create a sub-class of "Canadian nationals" within "British subjects."

A similar advance toward recognition of the existence of a Canadian nation is to be found in the gradual tendency toward direct negotiation instead of negotiation through London with the diplomatic or consular representatives of other powers. For many years the consuls-general of other countries at Ottawa or Montreal, more especially the consuls-general of the United States, Japan, Italy and Germany, discharged diplomatic or semi-diplomatic functions in Canada, and Sir Wilfred Laurier in 1910 considered that while "this has been done without authority and is contrary to the rules that apply among civilized nations, it became a necessity because of the development of the larger colonies of the British Empire, which have become practically nations." Further, Mr. Blake in 1882, Sir Richard Cartwright in 1889, and Mr. Mills in 1892 moved resolutions in favour of Canadian diplomatic representation at Washington, emphasizing the fact that a Canadian diplomatic representative would be an envoy of the Queen, that he would act in co-operation with the British Ambassador at Washington, that he would be in direct communication with the Government of Canada, to whom he would be responsible, and that the growing importance of Canada's relations with the United States made such an appointment desirable. While at that time these proposals were regarded as premature, in 1918, when Canada and the United States were both devoting their energies to the great struggle against a common foe, it was found necessary to establish a Canadian War Mission at Washington,

[1]According to the Immigration Act, 1910, a "Canadian citizen" is
"(i) a person born in Canada who has not become an alien;
(ii) a British subject who has Canadian domicile;
(iii) a person naturalized under the laws of Canada who has not subsequently become an alien or lost Canadian domicile."

which in effect, though not in form, was a diplomatic mission. This brought to a head the question of Canadian diplomatic representation at Washington; the authorities in London were consulted, with the result that on May 10, 1920, it was announced to Parliament that "it has been agreed that his Majesty on advice of his Canadian ministers, shall appoint a Minister Plenipotentiary who will have charge of Canadian affairs and will at all times be the ordinary channel of communication with the United States Government in matters of purely Canadian concern, acting upon instructions from, and reporting direct to the Canadian Government. In the absence of the Ambassador the Canadian Minister will take charge of the whole embassy and of the representation of Imperial as well as Canadian interests. He will be accredited by his Majesty to the President with the necessary powers for the purpose. This new arrangement will not denote any departure either on the part of the British Government or of the Canadian Government from the principle of the diplomatic unity of the British Empire." The principle involved in this arrangement had, as a matter of fact, already been accepted in the appointment of the International Joint Commission. Up to May, 1922, however, no Canadian Minister to Washington had been appointed.

Negotiation of Treaties.—The right to negotiate commercial and other treaties has been developing almost from the beginning. In 1871, the Prime Minister of Canada, Sir John A. Macdonald, became one of the British commissioners acting under instructions from the British Government, at the conference that resulted in the Treaty of Washington. This dual function, however, he found a very difficult one. In 1874, Hon. Geo. Brown was associated with the British Minister at Washington for the purpose of negotiating a commercial treaty between Canada and the United States. In 1878, the High Commissioner, Sir A. T. Galt, was commissioned to undertake negotiations with France and Spain for better commercial relations, these negotiations, however, to be conducted by the British Ambassador. In 1884, the High Commissioner for Canada, Sir Charles Tupper, in conjunction with the British Ambassador to Spain, was given full powers to conduct negotiations for a commercial treaty between Canada and Spain, the negotiations to be conducted by Sir Charles Tupper, the convention to be signed by both plenipotentiaries. In 1891, the Canadian Parliament petitioned for the denunciation of the commercial treaties with the German Zollverein and Belgium, which prevented Canada from extending preferential treatment to British products. The new Canadian tariff of 1897 provided for the grant of preferential treatment to British goods, and at the Colonial Conference of that year, the Premiers of the self-governing colonies unanimously recommended "the denunciation at the earliest convenient time of any treaties which now hamper the commercial relations between Great Britain and her colonies." The treaties were accordingly denounced. In 1907, Mr. Fielding and Mr. Brodeur negotiated a commercial convention between Canada and France, and in 1911, the negotiations regarding reciprocity

with the United States were carried on directly between the Government of Canada and the Government of the United States. In 1914, the Arbitration Treaty concluded between the British Empire and the United States, made provision that in case the British interests affected were mainly those of some one or other of the self-governing Dominions, the minister of the International Commission of Arbitration chosen from the British Empire might be selected from the Dominion principally interested. In December, 1918, commissioners were appointed by Canada and the United States to make a joint inquiry into fisheries questions arising between the two countries. As a result, a treaty looking to the preservation of the Pacific coast fisheries was signed by the Commissioners, but failed to secure ratification by the United States Senate.

Defence.—As early as 1862 the Government of Canada, following British precedents, successfully asserted the principle that the raising and maintenance of Canadian military forces were subject to the absolute control of the representatives of the Canadian people. During the South African war, the last of the British garrisons was temporarily, and in 1905, permanently withdrawn and the defence of the naval stations at Halifax and Esquimalt was taken over by the Canadian Permanent Force. When on the outbreak of war in 1914, Canadian forces were sent overseas an important constitutional question was the sufficiency of Canadian legislation for the control and discipline of the forces when outside the Dominion. However, the Governor in Council is authorized by section 69 of the Militia Act to place the militia on active service beyond Canada for the defence thereof, and by section 4 of the same Act, the Army Act, the King's Regulations and other relevant laws not inconsistent with Canadian enactments have force and effect for the governance of the militia as if enacted by the Parliament of Canada. But the Army Act, in section 177, provides that where a force of militia is raised in a colony, any law of the colony may extend to those belonging to that force, whether within or without the boundaries of the colony. This settled the question of extra-territorial jurisdiction. Another important development was the establishment in London in October, 1916, of a Canadian Ministry of Overseas Military Forces with a resident Minister. In course of time this became an Overseas Canadian War Office, with an adequate staff and a systematic arrangement of branches, administering the Canadian forces as a thoroughly autonomous body, under the primary direction of the Overseas Ministry, but finally responsible to the Canadian Government and Parliament.

Immigration.—Though provinces may legislate in the matter of immigration, their legislation falls to the ground if it is inconsistent with the legislation or with the international obligations of the Dominion. Several Acts of the province of British Columbia restricting immigration have been disallowed on this account. Under the Dominion law, Chinese immigrants are subjected to a head tax of $500, while Japanese immigrants are handled under a "gentlemen's

agreement" with the Imperial Japanese Government, Japan undertaking to restrict the flow of Japanese to Canada. The restriction of immigration from other parts of the Empire, and more particularly from India, is, however, a very difficult question because of its reaction on the loyalty of the Indian peoples to the Empire. The question was discussed at the Colonial Conference of 1897 and at the Imperial Conference of 1911, when it was pointed out that the reasons for existing restrictions were purely economic and did not involve the question of the inferiority of those restricted. In 1917, the matter was discussed at the Imperial War Conference. The principle of reciprocity of treatment was accepted, and at the 1918 Conference it was agreed that "It is an inherent function of the Governments of the several communities of the British Commonwealth, including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities." Provision was, however, made for permitting temporary visits. This arrangement has, at least for the time, settled a dispute which endangered the stability of the Empire.

Naturalization.—For a long period a very vexed question was the right of naturalization. Up to 1914, the Dominions were unable to grant full naturalization which would hold good throughout the Empire. In that year an act of the British Parliament (4-5 Geo. V, c. 17), provided for the issue of a naturalization certificate to an alien by the Secretary of State on proof of five years' residence, and the fulfilment of certain other conditions. Where the Parliaments of the Dominions enforced the same conditions of residence, their Governments were given power to issue certificates of naturalization, taking effect in all parts of the Empire that had adopted the Act. This was done by Canada in 1914 (4-5 Geo. V, c. 44).

Copyright.—A difficult and anomalous situation with regard to copyright was similarly cleared up in 1911, the Imperial Copyright Act of that year being based on the principle that in respect of copyright, the Dominions must be free to legislate as they saw fit. The Act of 1911, therefore, does not extend to any Dominion except where the Parliaments of these Dominions have declared it to be in force; similarly, Dominion Parliaments may repeal it where it is in force. With regard to merchant shipping, the situation discussed at the Imperial Conference of 1911 has not as yet been cleared up.

Granting of Titles.—Another source of difficulty between the British Government and the Dominions has been the granting of titles by the former to citizens of the latter who have rendered services to the Empire as a whole. Opportunities of rendering such service came to many citizens of the Dominions during the war, and the British Government was generous in its recognition of these services. Exception was taken in the Canadian Parliament to the granting of titles to Canadians, and in 1919 Parliament passed an address to his Majesty praying that he should "refrain from conferring any title of honour or titular distinction upon any of his

subjects domiciled or ordinarily resident in Canada, save such appellations as are of a professional or vocational character or which appertain to an office." It is interesting to note that, in the case of the proposed grant of a peerage by the British Government to a distinguished citizen of the Union of South Africa for war services, the Lord Chancellor of England has stated that it is "realized that no British citizen or subject primarily belonging to a Dominion ought ever to be recommended for honour in Great Britain, except with the assent and approval of his Government."

General Conclusion.—While it can hardly be maintained that the Dominions have as yet secured an adequate voice and influence in the direction of the Empire's foreign policy, it is to be observed that the powers of the Dominions have hitherto developed as the need for more extended powers has arisen. Without any violent break with the past, the Dominions have secured through the League of Nations a voice in international affairs as least as powerful as that of such independent nations as Argentina and Brazil. Ten years ago this would have been considered unthinkable without a total separation from the Empire, yet it has actually occurred, and there does not seem to be any reason why the process of evolution should not continue until we have the continuance of the British Empire secured upon a "basis of absolute out-and-out equal partnership between the United Kingdom and the Dominions."

The progress of the Dominions in international status in the past decade is thus set forth by Oppenheim, in the third edition of his International Law, Vol. 1, secs. 94a and 94b:

> "94a. Formerly the position of self-governing Dominions, such as Canada, Newfoundland, Australia, New Zealand, and South Africa, did not, in International Law, present any difficulties. Then they had no International position whatever, because they were, from the point of view of International Law, mere colonial portions of the Mother Country. It did not matter that some of them, as, for example, Canada, and Australia, flew as their own flag the modified flag of the Mother Country, or that they had their own coinage, their own postage stamps, and the like. Nor did they become subjects of International Law (although the position was somewhat anomalous) when they were admitted, side by side with the Mother Country, as parties to the administrative unions, such as the Universal Postal Union. Even when they were empowered by the Mother Country to enter into certain treaty arrangements of minor importance with foreign States, they still did not thereby become subjects of International Law, but simply exercised for the matters in question the treaty-making power of the Mother Country which had been to that extent delegated to them."
>
> "94b. But the position of self-governing Dominions underwent a fundamental change at the end of the World War. Canada, Australia, New Zealand, South Africa, and also India, were not only separately represented within the British Empire delegation at the Peace Conference, but also became, side by side with Great Britain, original members of the League of Nations. Separately represented in the Assembly of the League, they may, of course, vote there independently of Great Britain. Now the League of Nations is not a mere administrative union like the Universal Postal Union, but the organized Family of Nations. Without doubt, therefore, the admission of these four self-governing Dominions and of India to membership gives them a position in International Law. But the place of the self-governing Dominions within the Family of Nations at present defies exact definition, since they enjoy a special position

corresponding to their special status within the British Empire as "free communities, independent as regards all their own affairs, and partners in those which concern the Empire at large." Moreover, just as, in attaining to that position, they have silently worked changes, far-reaching but incapable of precise definition, in the Constitution of the Empire, so that the written law inaccurately represents the actual situation, in a similar way they have taken a place within the Family of Nations, which is none the less real for being hard to reconcile with precedent. Furthermore, they will certainly consolidate the positions which they have won, both within the Empire and within the Family of Nations. An advance in one sphere will entail an advance in the other. For instance, they may well acquire a limited right of legation or limited treaty-making power. But from this time onward the relationship between Great Britain and the self-governing Dominions of the British Empire is not likely to correspond exactly to any relationship hitherto recognized in International Law unless the British Empire should turn into a Federal State."

THE ARMS OF CANADA.

(See Frontispiece).

Armorial bearings owe their existence to the need of providing men with some mark of identification. They originated in the Middle Ages, when few men could read, but when all were trained to distinguish such symbols at a glance. Under these circumstances, the arms of the sovereign became generally identified with the arms of the nation, were emblazoned on shields and were later often incorporated into the national flag. In the case of England, the royal standard bears the Coat of Arms of the Sovereign, while the Union Jack or national flag is composed of the combination of the red cross of St. George on a white field, borne as their banner by the English from the time of the second Crusade, the white cross of St. Andrew on a blue field (Scotland), added in 1707, and the white cross of St. Patrick on a red field (Ireland), added in 1801.

Until 1921, the question of the Arms of Canada remained in an unsatisfactory position. In this country the Royal Arms, in their English form, have always been freely used. Soon after Confederation, when a Great Seal was required, a design approved by Royal Warrant of 26 May, 1868, displayed the arms of the four confederated provinces—Ontario, Quebec, Nova Scotia, and New Brunswick. This design, though not used for the Great Seal, was gradually adopted as the Arms of Canada. As the number of provinces increased, it became a common practice to add their arms to the original design. This resulted in overloading the shield with a multiplicity of detail, and a Committee, appointed to submit proposals, recommended the adoption of a coat of arms which has been approved by the Government and duly authorized, on November 21, 1921, by the King.

Three considerations were kept in view in determining the "achievement of arms," i.e., the combination of arms, crest, supporters, and motto, which has now been authorized. These were: first, that Canadians stand to their King in as close a relation as do any of his subjects elsewhere; secondly, that Canada, an integral part of the British Empire, has emerged from the war a member of the League of Nations; and lastly, that Canada was founded by the men of four different races—French, English, Scottish and Irish—and that Canadians inherit the language, laws, literature and arms of all four mother countries.

The arms are those of England, Scotland, Ireland and France, with a "difference" to mark them as Canadian, namely, on the lower third of the shield, a sprig of maple on a silver shield.

The crest is a lion holding in its paw a red maple leaf, a symbol of sacrifice.

The supporters are, with some slight distinctions, the lion and unicorn of the Royal Arms. The lion upholds the Union Jack, and the unicorn the ancient banner of France.

The motto is new—"*A mari usque ad mare*"—"From sea to sea", or, in a phrase familiar in Canadian politics and Canadian literature, "ocean to ocean". It is an extract from the Latin version of verse 8 of the 72nd Psalm, which in the Authorized Version is: "He shall have dominion also from sea to sea, and from the river unto the ends of the earth." The Latin reads: "*Et dominabitur a mari usque ad mare, et a flumine usque ad terminos orbis terrarum.*" There is a tradition that the Fathers of Confederation derived the designation "Dominion" from this verse.

II.—PROVINCIAL AND LOCAL GOVERNMENT IN CANADA.

MARITIME PROVINCES.

By the late Thomas Barnard Flint, M.A., LL.B., D.C.L., Clerk of the House of Commons of Canada, Ottawa.

The constitution and legislative powers of the provinces of the Dominion are in their general outlines as settled and regulated by the British North America Act, 1867, and amending acts. But in the development of local administration and in the working out of local problems, the provinces have varied considerably. These variations have depended primarily upon the stages and forms of local self-government in force at the time of Confederation, and secondarily upon the financial and industrial policies of the legislatures which then assumed control. Nova Scotia and New Brunswick were two of the original provinces which formed the federal union of Canada. Prince Edward Island became part of the federal system in 1873.

Nova Scotia, New Brunswick and Prince Edward Island, immediately after entering the union, found themselves each equipped with a Lieutenant-Governor appointed by the Governor-General. This official holds office, generally speaking, for five years from the date of his appointment. He is not removable except for cause assigned and communicated to Parliament. The provisions relating to the powers, duties and responsibilities of Lieutenant-Governors are to be found in sections 58 to 68, inclusive, of the British North America Act, 1867, and apply uniformly to all Lieutenant-Governors throughout the Dominion.

The legislatures of each of the three Maritime Provinces, upon entering the union, consisted of the Lieutenant-Governor and of two Houses, styled the Legislative Council and the Legislative Assembly. These legislatures had the same exclusive powers assigned to them as to the other provinces entering the union at the same or at any subsequent period. One of the most important of these powers is that of the amendment, from time to time, of the Constitution of the province, except as regards the office of the Lieutenant-Governor. Like all the other provinces, they have the power of direct taxation within the province, of borrowing money, of establishing public offices, of disposing of the crown lands of the province, of the maintenance and establishment of a great variety of public and reformatory institutions and of municipalities with such powers as the province may see fit to grant. The list of exclusive provincial powers also includes such important matters as the making of laws relating to licenses for raising revenue for provincial or municipal purposes; providing for local works and undertakings of every description (except certain classes specially reserved to the federal power); incorporating companies with provincial objects; and legislation respecting the solemnization of marriage. The whole vast field of property and civil rights within the province, the administration of justice and the constitution, maintenance and organization of provincial courts with both civil and criminal jurisdiction, as well as the procedure in civil matters in those courts, are retained under provincial jurisdiction.

The exclusive control of each province over the subject of education has given rise to legal and constitutional questions of the highest importance. Their adjustment has engaged the attention of legislatures, of parliament and of the courts of Canada, as well as the privy council of the Mother Country from time to time almost since the day of the union.

The provinces have also legislated upon, and devoted large sums of money to the promotion of agriculture, and to some extent immigration in which they have been assisted by the federal administration, which also has jurisdiction over these subjects. These powers are of course common to all the provinces.

NOVA SCOTIA.

This province has made no organic changes in its constitution since the union in 1867. In 1867, the Legislative Council consisted of 36 members and the Legislative Assembly of 55 members. The number of members of the Legislative Council is now 21 and of the Assembly 43. Legislative councillors are appointed for life, and the members of the Assembly are elected for four years, the Assembly term consisting of that period. The constitutional relations of the ministry to the Assembly are based on the well recognized principles of responsible government, in accordance with which the ministry retains office only so long as it is supported by a majority in the Legislative Assembly. This rule applies to all the provinces of Canada. Many efforts made towards abolishing the Legislative

Council in Nova Scotia have proved abortive. The local ministry or cabinet, styled the Executive Council, consists of the Prime Minister, (being the Provincial Secretary and President of the Council), the Attorney-General, the Minister of Works and Mines and the Minister of Highways. These are salaried officials, and the other members are six in number without office. Agriculture, immigration and education are under the control and management of the government through certain boards and councils, each with its secretary and staff of officials.

The sources of the principal revenues are (1) mines and minerals upon which certain royalties are charged, together with license fees and rentals; (2) the federal subsidy and interest on balances due from the Dominion, paid by virtue of the British North America Act; (3) interest on railway loans and advances, succession duties, payments from the Dominion Government under the Agricultural Instruction Act; (4) crown lands and other fees and dues paid into the Provincial Secretary's office. In 1921, the total revenue from all sources, capital and ordinary, was $10,427,919.32.

Municipal Institutions.—Municipal administration in Nova Scotia has been developed since Confederation. Previous to that event the local government of counties and townships was confided to the magistracy, which was an appointed body, holding commissions for life and not responsible in any way to the electorate. In the early years of its history this body did much useful and important public service, yet abuses here and there existed on account of the irresponsible nature of their tenure of office, which rendered reform and public accountability very difficult to obtain. Public opinion, however, and the controlling influence of the legislatures operating steadily upon even irresponsible bodies of life-appointed magistrates made the institution as it existed fairly acceptable to the people generally. In 1864 an act providing for the optional incorporation of counties and townships was passed, but few counties or districts took advantage of the privilege thus accorded. In 1875, the incorporation of the counties and certain townships was made compulsory, twenty-four municipalities being then established. In 1895, the Towns Incorporation Act was passed, making the incorporation of towns throughout the province optional. In 1921 there were 41 incorporated towns.

The county councils consist of councillors elected by the ratepayers every three years; usually one is elected for each polling district, but in some districts two are provided for. The warden or presiding officer is chosen by the council and holds office until the next election of councillors. The mayors of towns are elected by the ratepayers and hold office for one year. The city of Halifax, the capital of the province, has a special charter, the mayor being elected annually and the eighteen aldermen (or members) for three years, six retiring each year but being eligible for re-election.

The exercise of the powers of the councils, the election of their members and the duties and responsibilities of their officials, their

meetings, proceedings and by-laws, their methods and forms of taxation, as well as the limitation of their borrowing powers, are controlled and regulated in each particular by statutes rigidly enforced by provincial authority or by the courts. The training of large numbers of public spirited citizens in the practical exercise of the duties of self-government is not the least of the advantages of the municipal systems of Canada. They furnish a rich fund of talent and experience upon which to draw for the wider spheres of provincial and federal legislation.

Judiciary.—The provincial courts consist of (1) the supreme court, which is a court of appeal and also a circuit court, and (2) the county courts. The supreme court consists of a chief justice and six other judges. One of these is a judge in equity, who also acts in divorce causes and one is admiralty judge of the exchequer court of Canada. This court has original jurisdiction in all matters not specially delegated to the lower courts and appeal jurisdiction from the county courts. The county courts have a limited original jurisdiction and an appeal jurisdiction from probate and magistrates' courts in certain cases. The judges of this court are seven in number, each having a district of jurisdiction covering a county or group of counties and holding terms of court in the county towns of their respective districts.

The judges of the supreme and county courts are appointed and paid by the Dominion Government, but the procedure of the courts in all civil matters is regulated by provincial legislation. The purely provincial courts and courts of probate have jurisdiction over wills and intestate estates. Stipendiary and police magistrates' courts and courts of justices of the peace are also under provincial jurisdiction. The judges of these courts and justices of the peace are appointed by the local government and are paid, in some cases by salaries and in others by fees. The sheriffs, clerks, registrars and officers of all the courts are appointed by the provincial authorities.

In criminal cases the jurisdiction and procedure of all the courts are fixed by federal statutes. The procedure as to the selection of grand and petit jurors, of revisers of voters' lists and assessment courts is fixed by the provincial statutes. In each county, and in some counties in one or more districts of a county, are offices for the registry of deeds and of all documents pertaining to transfers of or affecting titles to real estate as well as those creating and discharging liens on personal property.

NEW BRUNSWICK.

The province of New Brunswick in all essential features of provincial administration is similar to its neighbour, Nova Scotia, but some differences may be noted. The province entered Confederation with a Legislative Council of 40 members holding their seats for life, a Legislative Assembly of 40 members and an Executive Council of nine members. Under its powers of changing the provincial constitution the Legislative Council was abolished by an act passed on April 16, 1891. For many years an agitation for its abolition had continued,

and the governments of the period refrained from filling vacancies until the number of members was so reduced that the passage of an abolition act became comparatively an easy matter. The retiring members of the Council retained their title and precedence for life. The Assembly at present is composed of 47 members, and the Executive Council is composed of (1) the Premier, (2) the Minister of Lands and Mines, (3) the Minister of Public Works, (4) the Provincial Secretary-Treasurer, (5) the Minister of Agriculture, (6) the Minister of Public Health, and (7) the Attorney-General. Each of these ministers has a departmental staff under his direction.

The ordinary revenue for the fiscal year ended Oct. 31, 1921, amounted to $2,892,905 and the ordinary expenditure to $3,432,512.

In New Brunswick the subject of public instruction is under the management of a Board of Education consisting of the Lieutenant-Governor of the Province, the members of the Executive Council, the Chancellor of the University of New Brunswick and the Chief Superintendent of Education.

Municipal Institutions.—On the subject of municipal institutions, under which the people have more complete control over their local affairs, the province of New Brunswick has passed through stages of development similar to those of Nova Scotia. An interesting passage will be found in Hannay's History of New Brunswick, where, writing on this subject, he observes:

> "Sir William Colebrooke and Sir Edmund Head had both regretted the failure of attempts to establish municipal institutions throughout the province, but they perhaps did not discern that this failure was due to the influence of the magistrates in sessions, who did not like to be deprived of their power of controlling the affairs of the counties. These magistrates naturally resisted every improvement, which they denounced as innovations, and they were supported generally by the Legislative Council.
>
> "The system of county government was as bad as possible, because the magistrates were not responsible to any person. The condition of the county accounts was never made public, and it was not until a comparatively late period in the history of the province that the Grand Jury obtained legislative authority to inspect the county accounts.
>
> "Municipal institutions came in the course of years, but not till long after Sir Edmund Head had taken his departure from the province. Since then the influence of the people upon the municipal government has been strengthened by the incorporation of most of the towns in the province, so that the people have an opportunity not only of knowing how their money is being spent but of directing the expenditure."

In New Brunswick the first municipal act was passed in 1851. This act, which was subsequently amended, rendered incorporation optional. But these acts were not in many cases taken advantage of. The counties were, however, divided into parishes, districts having a certain amount of local autonomy and some limited powers of administration, which have been recognized in subsequent municipal legislation. They are provided with local courts presided over by commissioners who are *ex officio* justices of the peace, and in some cases they are provided with stipendiary or police magistrates. These commissioners have civil jurisdiction in debts not exceeding eighty dollars and in cases of tort when the damages claimed do not exceed thirty-two dollars.

At the time of confederation the municipal system had been very slightly developed. But in 1877 an act providing for compulsory municipal incorporation was put in force, and, with its amendments, is substantially in force at the present time. It provides that county councils be constituted as bodies corporate, having two councillors elected yearly from each parish in the county. The councils elect from among their members a presiding officer who is styled the warden and who holds office until the next election of councillors. Councils may themselves, however, provide by by-law for their election biennially, a provision which does not apply to the municipality of the city and county of St. John. The city of St. John, which in 1785 was known as "Parr Town," received a charter in that year through Lieutenant-Governor Carleton, a brother of the famous soldier, Sir Guy Carleton (afterwards Lord Dorchester). The qualifications of voters for the councils are very liberal. Every male, or female person, being a widow or unmarried, of the age of 21 years or over, being a British subject, a ratepayer of the parish having an income or personal property or both combined to the amount of one hundred dollars, is entitled to vote. A resident of the parish having real property of any value, or, if not a resident, having real property to the value of one hundred dollars, is also entitled to vote. The dates and time of meeting of the councils are fixed by statute and differ in different municipalities. In addition to a warden each elects a secretary, a treasurer (the two offices may be combined in one person), and an auditor, who may not be a councillor nor hold any office under the council. The councils also appoint overseers of the poor, constables, commissioners of highways, collectors of rates and other parish and county officials as may be necessary. Councillors under some circumstances also act as revisers of voters' lists. The warden is required to publish each year a full and detailed financial statement of the affairs of the municipality which shall be signed by the auditor and himself.

PRINCE EDWARD ISLAND.

At the time of entering the union the government of Prince Edward Island consisted of a Governor and an Executive Council, a Legislative Council of 13 members, and a House of Assembly of 30 members. The Legislative Council was made elective in 1862 and so continued until its abolition after the union in 1873. The former Legislative Council districts, after the passage of the Abolition Act, elected members to the Legislative Assembly, fifteen in number, while the same districts elected members to the Assembly on a different franchise, thus practically amalgamating the two Houses into one Assembly of 30 members. The electoral system, as far as voting is concerned, is practically one of manhood suffrage. The Executive Council of Prince Edward Island consists of (1) the President of the Council, (2) the Provincial Secretary-Treasurer, who is also Commissioner of Agriculture, (3) the Commissioner of Public Works, (4) the Attorney-General and (5) four members without portfolio.

With regard to the judiciary, the supreme court has a chief justice and two assistant judges. The chief justice is also the local judge in admiralty of the exchequer court. The supreme court is also a court of appeal and has jurisdiction in appeal chancery cases. It has original jurisdiction both in civil and criminal matters. In civil cases of debt the action must be for an amount above $32, and all cases beyond the jurisdiction of the county court may be tried before a judge of the supreme court. The assistant judges of this court have also chancery powers. There is a surrogate and probate court for the province with one judge. A system of county courts is established consisting of three judges, one for each county. These are appointed and paid by the federal government and have jurisdiction in suits up to the sum of one hundred and fifty dollars. Education is under the direction of a Board of Education consisting of the members of the Executive Council of the province and the Superintendent of Education, who is also secretary of the Board.

In the calendar year 1921, the ordinary revenue amounted to $727,046 and the ordinary expenditure to $687,935.

QUEBEC.

By G. E. Marquis, Chief, Bureau of Statistics of Quebec.

Political and Administrative Organization.—The visitor who for the first time enters the chamber of the Legislative Assembly of Quebec is sure to notice and admire the large painting placed above the Speaker's chair. This painting represents the first assembly of representatives of the people to be elected by popular vote, which sat in Canada at Quebec, the capital of Lower Canada, in 1792, on the establishment of the parliamentary government which still exists and which originated in the Constitutional Act of 1791.

A similar form of government was at the same time established in the province of Upper Canada. This state of affairs lasted down to 1840, when the two provinces were united, and the territory governed by the union of the two Canadas received the name of province of Canada. Finally in 1867 a confederation of four provinces was set up. The provinces of Ontario, Quebec, New Brunswick and Nova Scotia were the first to join in establishing a central government, the seat of which was fixed by the Imperial Government at Ottawa. To each province was granted a Provincial Government, having the right to legislate upon public instruction, public works (within the province), the administration of the lands, colonization, agriculture, asylums, prisons, reformatories and industrial schools, the organization of the civil courts, municipal institutions, as well as other points of Provincial interest. The respective powers of the Dominion and of the various Provincial Governments are exhaustively defined by sections 91 and 92 of the British North America Act.

The legislature of Quebec is composed of three branches: the Legislative Assembly of eighty-one members representing the eighty-two electoral divisions of the province (the counties of Chicoutimi

and Saguenay have the same representative); the Legislative Council of twenty-four members nominated for life by the Lieutenant-Governor in Council; and finally an Executive Council composed of the Lieutenant-Governor and his advisors, the ministers of the Crown.

The Legislative Assembly and also the Legislative Council have the power to bring forward bills relating to civil and administrative matters and to amend or repeal the laws which already exist. A bill, to be approved by the Lieutenant-Governor, must have received the assent of both Houses. Only the Legislative Assembly can bring forward a bill requiring the expenditure of public money. The extreme length of a Parliament is five years. Since Confederation sixteen premiers have been at the head of the administration of the Province of Quebec. At the present time the Premier is the Honourable L. A. Taschereau, who has been President of the Executive Council and Attorney-General since July, 1920. He is assisted by seven ministers, each with departmental portfolios (one of them, the treasurer, having two portfolios) and by four ministers without portfolio. Sir Charles Fitzpatrick, K.C., G.C.M.G., is the Lieutenant-Governor.

Municipal Organization.—For the purposes of local or municipal administration the Province of Quebec is divided into county municipalities, 74 in number; these include rural municipalities and villages, as well as town municipalities hitherto organized under the former municipal code. At the present time there are 20 city, 87 town and 249 village municipalities, as well as 926 rural municipalities, making a total of 1,282 local municipalities. Each local municipality is administered by a corporation composed of seven members in the rural municipalities and of a number varying according to the municipality in the cities and towns. In rural municipalities the election of candidates for the municipal council takes place annually in the month of January when three of the six councillors are replaced, while the mayor is elected for a two year term by the electors. The county council is composed of all the mayors of the villages and rural municipalities constituting the county. The head of this body bears the name of warden and is elected annually at the March quarterly meeting of the council.

Most of the towns and cities are organized into separate corporations independent of any county council, in virtue of special charters granted by the legislature. The composition varies in different municipalities. The functions of the municipal councils are very extensive. They can make regulations concerning municipalities, provided that these regulations contain no provisions incompatible with the laws of the country. They can appoint officials to manage the business of the municipality; form committees to undertake particular branches of the administration; make all highway regulations; nominate a local board of health; see to the maintenance of order; and finally aid colonization and agriculture by imposing direct taxes upon the taxable property of municipalities.

The powers conferred upon the municipal council are then very extensive, but these powers contained in the law of cities and towns

or in the municipal code extend only to questions of purely local interest. In order to distribute the taxation necessary to the local public administration every municipal council has the right to impose and raise by direct taxation on the taxable property of the municipality, as well as on certain business stock, any sum necessary and this within the limits of its functions. Every two years assessors are named by the Council who establish the value of the real property of their municipality. These assessors must make a new assessment roll every three years, but must amend and correct this roll every year. It is by basing itself on this assessment, that the municipal council raises the taxes which it needs to meet the expenses of administration. A few years ago a Department of Municipal Affairs was established in the Provincial Government to supervise more closely the carrying out of the municipal law. At the present time the Minister of Municipal Affairs is also the Treasurer of the Province, but he has a separate Deputy Minister for each of the two departments. It may be added that each year in the month of January the secretary or the warden of each municipal corporation, rural or urban, is under obligation to send to the Bureau of Statistics a report on the financial position of the corporation, as well as a summary of the operations undertaken in the various services in the course of the preceding year.

School Organization.—Public instruction in the Province of Quebec is governed by a single act called the Law of Public Instruction, although there are two kinds of schools, one for the Catholics and the other for the Protestants or non-Catholics. This is what is called the confessional system. Regulations for each of these religious units are prepared by the Catholic Committee or the Protestant Committee of the Council of Public Instruction, respectively, and submitted for the approval of the Lieutenant-Governor in Council before going into force. The territorial unit administered by a school corporation is called a school municipality. This may differ in boundaries from the parish and even from the local municipality. There are 1,718 of these school municipalities, of which 1,367 are Catholic and 351 Protestant. School municipalities are constituted at the request of a group of ratepayers by the Lieutenant-Governor in Council on the recommendation of the Superintendent of Public Instruction or occasionally by an act of the legislature. Each of them must be divided into school districts, except in the cities and towns. The administrative body which directs them bears the name of school corporation. The corporation is composed of five commissioners or three trustees. In the same municipality the dissentients, that is to say those who are from the religious point of view in the minority, elect the trustees.

The school commissioners and trustees are elected for three years, five of the former or three of the latter forming a school corporation. Their duties are numerous, but in brief it may be said that they must erect a school in each school district, look after its maintenance, provide the necessary equipment, engage teachers, supervise their teaching and settle the differences which may arise between teachers and parents.

Like the municipal corporations, the school corporations have the right to impose taxes for the construction and maintenance of schools and for the payment of the teaching staff. School taxation is distributed over all the taxable property of the school municipality; the assessment roll prepared by the Municipal Council must, except in rare cases, serve as a basis for the taxation imposed by the school corporations.

The school corporations have under their control schools of four kinds; kindergartens, elementary primary, intermediate primary and superior primary schools. Soon, however, a modification of the above classification will become effective, under which the last three types of schools will be reduced to two. The programme of studies has been modified so as to give a more suitable type of education to country children, so as to keep them on the land, and to provide for town and city children an education which will fit them for industry, commerce and finance.

Besides the schools under control of the school corporation, there are also the classical colleges where secondary instruction is given, as well as four universities, not including several special schools. The whole school organization is directed by the Council of Public Instruction, which prepares, as we have already seen, the school regulations and the programme of studies. It chooses also the professors and principals of the Normal schools, as well as the examiners of candidates for teachers' certificates; finally, it approves as it sees fit, the text-books which are submitted to it. This Council is formed of two committees, Catholic and Protestant, each of which watches over the interests of its co-religionists in conformity with the law.

When the two Committees sit together, thus constituting the Council, its chairman is the Superintendent of Public Instruction, who also directs the Department of Public Instruction. He is named for life by the Lieutenant-Governor in Council, but the Provincial Secretary is the spokesman of this Department, and is responsible before the Provincial Legislature for its administration.

ONTARIO.

By S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., Editor Canada Year Book.

Historical.—The northern part of what is now the Province of Ontario came under British rule in 1713, by the Treaty of Utrecht, the southern part in 1763, by the Treaty of Paris. At the latter date the whole white population was only about 1,000, mainly settled along the Detroit River. By Royal Proclamation of Oct. 7, 1763, the eastern part of the province, and by the Quebec Act of 1774 (14 Geo. III, chap. 83), the whole of what is now southern Ontario, became part of the Province of Quebec, under French civil and English criminal law and without any representative government. The immigration of the United Empire Loyalists and their settlement in the country led to an increasing demand both for English civil law and for representative institutions. This demand was met by the

passing of the Constitutional Act of 1791 (31 Geo. III, chap. 31), which established the Province of Upper Canada (Ontario) with a Lieutenant-Governor, a Legislative Council of not fewer than seven, and a Legislative Assembly of not fewer than sixteen members, to be elected by the people. These representatives of the people, however, had little control over the Executive Council, and the result was the struggle for responsible government, i.e., the struggle to make the Executive Council responsible to the representatives of the people for its administration of the affairs of the community. This struggle culminated in the rebellion of 1837, after which Lord Durham's report paved the way for the introduction of responsible government and the union of the Canadas by the Act of Union (3-4 Vict., c. 35). The Legislative Assembly established under this Act consisted of 42 members from each province, increased to 65 from each province in 1853. The Legislative Council was to consist of at least 20 members, appointed for life. In 1854 permission was granted by the British authorities to change this system, and in 1856 appointments to the Legislative Council were made elective; each province was represented by 24 members, one-fourth of the total number retiring every two years.

Present Constitution.—By sections 69 and 70 of the British North America Act, the legislature of Ontario was established with a single elective chamber having 82 members, the Legislative Assembly. In 1874 the number of members was increased to 88, in 1885 to 90, in 1894 to 94, in 1902 to 98, in 1908 to 102 and in 1914 (4 Geo. V, chap. 4) to 111. It is elected for 4 years on an adult suffrage basis and holds annual sessions, so that 12 months shall not intervene between the last sitting in one session and the first sitting in the next. The powers of the Legislature are defined in sections 92 and 93 of the British North America Act. The Executive Council consists (1922) of eleven members, ten of them holding portfolios as follows: Prime Minister and President of Council; Attorney-General; Secretary and Registrar; Treasurer; Lands and Forests; Agriculture; Public Works and Highways; Education; Labour; Mines.

Besides the regular Departments, certain Commissions have been created for specific purposes. These include the Niagara Falls Park Commission, established in 1885, under an act for the preservation of natural scenery about Niagara Falls (48 Vict., chap. 21); the Railway and Municipal Board, established in 1906 by 6 Edw. VII, chap. 31, and entrusted with control of the construction, operation and maintenance of railways incorporated under Provincial Acts; the Hydro-Electric Power Commission, established in 1906 under an Act to provide for the transmission of electric power to municipalities (6 Edw. VII, chap. 15); the Timiskaming and Northern Ontario Railway Commission, created under the Timiskaming and Northern Ontario Railway Act in 1902, for the construction and operation of a railway from North Bay to a point on Lake Timiskaming, (the line was subsequently extended to Cochrane, to effect a junction with the National Transcontinental Railway).

Municipal Government.—Under the system established by the Constitutional Act of 1791, municipal administration was carried on in the main (as in the England of those days) by the courts of quarter sessions, whose members were appointed by and responsible to the governor in council. As urban communities began to grow, there commenced an agitation for local self-government, which after many rebuffs, resulted in 1832 in the grant to Brockville of a limited measure of control of the local police. In 1833 Hamilton and in 1834 Belleville, Cornwall, Port Hope and Prescott received similar powers, while in the latter year York became a self-governing city with a mayor, aldermen and councillors under the name of Toronto, Kingston receiving in 1838 a similar constitution, though being denied the name of city. These developments secured the cordial approval of Lord Durham, who maintained in his report (1839) that "the establishment of a good system of municipal institutions throughout this Province is a matter of vital importance..... The establishment of municipal institutions for the whole country should be made a part of every colonial constitution." Upon the introduction of responsible government, the District Councils Act of 1841 was passed, giving a considerable measure of local self-government with a large measure of control by the central authorities. A more comprehensive measure, the Municipal Act of 1849, provided "by one general law, for the erection of municipal corporations and the establishment of regulations of police in and for the several counties, cities, towns, townships and villages in Upper Canada." This Act has been called the Magna Charta of municipal institutions, not only for Ontario, but for the newer provinces which largely copied Ontario institutions. Its main features are still clearly visible in the municipal system of today.

Under this system there existed in 1868, when the first legislature of Ontario assembled, 539 local self-governing units, including 36 counties, 399 townships, and 104 cities, towns and villages. In 1921 there were in the Province 911 local self-governing units, including 38 county municipalities, 557 townships, 149 villages, 143 towns and 24 cities. There is thus a local self-governing body for every 3,200 of the population of the province, and the general effect has been to initiate the masses of the people in the problems of self-government, so that Ontario has been described by eminent students of democratic governments as one of the most perfect democracies in existence.

The present law respecting municipal institutions is contained in chapter 192 of the Revised Statutes of Ontario, 1914, and its amendments (4 Geo. V, c. 33, 5 Geo. V, c. 34, 6 Geo. V, c. 39).

The territorial division of the province for municipal and judicial purposes is governed by the Territorial Division Act (R.S.O., 1914, c. 3), section 11 of which provides that, subject to the provisions of the Municipal Act, the Lieutenant-Governor may by proclamation constitute and fix the boundaries of new townships in those parts of Ontario in which townships have not been already constituted.

Townships and Villages.—Township municipalities may be organized in hitherto unorganized territory when the population of the geographical township of six miles square is not less than 100, and where the inhabitants of an area not surveyed into townships exceed 100 on not more than 20,000 acres. The township is governed by a chief executive officer styled reeve, and four others who may be deputy reeves or councillors, depending on the number of municipal electors. (Deputy reeves, together with the reeve, represent the township on the county council). These provisions apply also to villages, which may be created out of districts or parts of townships where a population of 750 exists on an area not exceeding 500 acres. Police villages with certain limited rights of self-government may be formed by county councils where a population of not less than 150 exists upon an area of not less than 500 acres and where the majority of freeholders and resident tenants of the locality petition therefor. Police villages are administered by three trustees who may be created a body corporate where the population exceeds 500.

Towns.—Towns may be incorporated on conditions prescribed by the Ontario Railway and Municipal Board, but must have not less than 2,000 population. A town in unorganized territory is governed by a mayor and six councillors, or if the population is not less than 5,000, by a mayor and nine councillors. A town not in unorganized territory is governed by a mayor, a reeve, as many deputy reeves as the town is entitled to have as its representatives in the county council, and three councillors for each ward where there are less than five wards, or two councillors for each ward where there are five or more wards. Towns having not less than 5,000 population may, by by-law approved by the electors, withdraw from the jurisdiction of the county council. The towns of Walkerville, Prescott, Trenton, Smiths Falls, Brockville, Ingersoll, St. Marys, were in 1921 in this position.

Cities.—Cities, which are always entirely separate in government from their counties, must have, when constituted, a population of 15,000. They are governed by a mayor, a Board of Control if such exists, and, at the option of the council, two or three aldermen for each ward. Boards of Control, who may be elected by general vote in any city of more than 45,000 people and must be so elected in cities of over 100,000, form a sort of executive authority for the larger cities, giving a large portion of their time to the public service, and being paid a salary considerably higher than the alderman's indemnity. The duties of the Board of Control include the preparation of estimates, the awarding of contracts, the inspection of municipal works, and the nomination of officers and their dismissal or suspension. The Board reports to the council, in which its members also have a vote, and its action is subject to approval or reversal by the whole council. The council may not make appropriations or expenditures of sums not provided for by the Board's estimates, without a two-thirds vote of

the members present. Boards of control exist in Toronto, Ottawa, Hamilton and London.

Counties.—All members of county councils are also members of the councils of the municipalities within the larger county municipality, being the reeves and deputy reeves of townships, villages and towns. The presiding officer of the county council is called the warden, and is annually chosen from among the reeves who are members of the council. The county council has charge of the main highways and bridges, the courthouse, gaol, house of refuge, registry office, etc. Its rates are collected through the constituent local municipalities. Provisions for the erection of one kind of urban municipality into another are given in the Act. Four of the thirty-eight county municipalities of the province are composed of a union of counties, viz. (1) Leeds and Grenville, (2) Northumberland and Durham, (3) Prescott and Russell and (4) Dundas, Stormont and Glengarry.

Use of the Referendum.—Important questions and certain descriptions of by-laws are under the Municipal Act submitted to the direct vote of the electors, money by-laws generally to property-owners only. Except in the case of money by-laws, the decision of the electors is not legally binding upon the governing body of the municipality. Municipalities are empowered to pass by-laws to provide bonuses in aid of manufactures and railways; these bonuses may take the form of money grants, guarantees, total or partial exemption from municipal taxation or other special facilities.

Judiciary.—Under the Law Reform Act of 1909 (9 Edw. VII, c. 28), the Supreme Court of Ontario is established in two divisions, the appellate division and the high court division, the former being a continuation of the old court of appeal and the latter a continuation of the old high court of justice. The appellate division is composed of not less than two divisional courts, each with five justices, who try appeals from the high court and the other courts of the province, and from whose decision appeals may in certain cases be made to the Supreme Court of Canada. The justices of the high court hold assizes at least twice a year in each county, with a very comprehensive jurisdiction. In each county or district there is a court presided over by a judge, who sits at least twice a year, with or without a jury, to try minor civil actions. Each county judge also presides at least twice yearly over a court of general session, with a limited jurisdiction in criminal matters. Criminals may, with their own consent, be tried by the county judge without a jury. Each judicial district is divided into court divisions in each of which a division court is held by the county judge, or his deputy, at least once in every two months. These courts are for the recovery of small debts and damages. The county judges hold revision courts for the revision of assessment rolls and of voters' lists; they are also judges of the surrogate courts, which deal with the estates of deceased persons.

MANITOBA, SASKATCHEWAN AND ALBERTA.

By the Rev. Edmund H. Oliver, Ph.D., F.R.S.C., Principal of the Presbyterian Theological College, Saskatoon, Saskatchewan.

Historical Sketch.

Establishment of Provinces.—On the prairies there have been two distinct trends of historical and political development—that of the Red River and that of the Territories. The whole region was originally under the sway of the Honourable Company of Adventurers trading into Hudson's Bay. In the case of the Red River, responsible self-rule came with the transfer to Canada. The Territories possessed absolutely no form of government prior to their incorporation in the Dominion.

MANITOBA.

On September 4, 1812, Captain Miles Macdonell, in the name of Lord Selkirk, took formal possession of the District of Assiniboia at the forks of the Red and Assiniboine Rivers. This was the first act of government in what is now Western Canada.

The deed of the District of Assiniboia to Selkirk reserved to the Company "all rights of jurisdiction." For this reason the Company's commission was given to the governor appointed by Selkirk. The governor could act as judge. But to do this correctly, he must act with his Council. A Council of Assiniboia was appointed to safeguard the judicial functions of the governor. It was not so much a Council of Assiniboia as the Council of the Governor in Assiniboia, not so much a legislative or administrative body as a judicial tribunal. From the time of Governors Bulger and Pelly the Council began to assume administrative and legislative functions. It began also to divest itself of judicial functions. In the former it was entirely successful; in the latter, only partly so. The minutes of the Council of May 4, 1832, show the Council launched upon its career of legislative activity. It adopted regulations concerning pigs and stallions allowed to range at large, fires, statute labour for the improvement of roads and bridges, public fairs and the taking of horses from their grazing grounds.

The Council never was in any degree responsible to those whose interest it was expected to regard and foster. But its membership was largely representative of the leaders in the community. It enacted a great variety of measures in relation to fires, animals, horse taking, hay, roads, intoxicating of Indians, liquor laws, customs duties, police, debtors, intestate estates, marriage licenses, contracts for service, surveyors, postal facilities, premium on wolves, administration of justice and other matters of general concern. On June 25, 1841, was formed the Municipal District of Assiniboia, which extended in all directions fifty miles from the forks of the Red and Assiniboine Rivers. To carry out its resolutions the Council of Assiniboia organized a board of works, a committee of economy, a volunteer corps, legal and judicial machinery, a tariff system and postal facilities. It appointed public officials and erected the necessary buildings. It

supervised the whole social life of the settlement, imposing duties and restrictions on the sale and importation of liquors, superintending the building of roads, the issue of marriage licenses and the encouragement of native industries.

The series of Dominion Acts relating to the West begins with "An Act for the temporary government of Rupert's Land and the Northwestern Territory when united with Canada," June 22, 1869. This Act sought to prepare for the transfer of the Territories from the local authorities to the government of Canada. A year later the Manitoba Act (33 Vict., c. 3) launched upon its independent constitutional career the old District of Assiniboia, now in possession of complete self-government. The Lieutenant-Governor in the first days of the province naturally occupied a very important position in the administration of affairs. For a short time there was a temporary government with two ministers and the Legislative Assembly. After this, government was carried on with the Legislative Assembly and a Legislative Council, but without a premier. At the end of six years the Legislative Council was abolished. Without a Legislative Council but with a Premier and a Legislative Assembly the province assumed the constitutional form which has endured to the present day.

SASKATCHEWAN AND ALBERTA.

The landmarks in the growth of provincial institutions for Manitoba are the coming of the Selkirk colonists, the development of the Council of Assiniboia, the passing of the Hudson's Bay Company as a governmental body, the enactment of the Manitoba Act and the abolition of the Legislative Council. The chief stages in the political development of the Northwest Territories (that portion of Rupert's Land and the Northwestern Territory not included in the province of Manitoba) are indicated by the capitals, Fort Garry, Swan River, Battleford and Regina. When the Government was at Fort Garry the Territories were administered by officials resident in a neighbouring province. In Livingstone, Swan River, the Lieutenant-Governor and councillors belonged for the first time to the Territories exclusively. Battleford marked the beginnings but only the beginnings of self-government. It was reserved to Regina to witness the evolution from the Northwest Council to the Legislative Assembly, from representative to responsible government, from territories to provinces.

The Territories were not at first given a separate government. They were administered from Fort Garry by the Lieutenant-Governor of Manitoba with the aid, first of a small executive council of three, irregularly appointed, the Hon. Mr. Justice Johnson, the Hon. D. A. Smith and the Hon. Pascal Breland, and then with the aid of a more formal and more regularly appointed but still admittedly provisional Northwest Council. This council addressed itself to the task of laying the foundations of territorial administration. It did much, also, to secure the goodwill of the Indian tribes.

The charter of the separate political existence of the Territories is the Northwest Territories Act, 1875. It was under this Act that the late Hon. David Laird was appointed Lieutenant-Governor. He

held a legislative session under the Act of 1875 at Livingstone, Swan River, in 1877. Battleford was the capital for three sessions of the council. The construction of the Canadian Pacific Railway transferred the seat of government to the line of railway, designated at first as Leopold, and then as Regina. Settlement ceased to follow the course of the rivers. Trade routes for freighters now began to run north and south from the railway. The old Northwest passed away.

At the same time a profound change was being effected in the constitutional character of the Territories. While the capital was still at Battleford, in 1881, Chief Factor Lawrence Clarke was elected to represent the district of Lorne. This constituted the first opportunity given the settlers themselves to express their sentiments in the administration of affairs. Three years later the elected representatives of the people became numerous enough to exert an influence upon legislation. The years that ensued were wonderfully formative. In 1884 the Northwest Council laid the foundations of the territorial school and municipal systems. The crushing of the half-breed uprising in 1885 assured the dominance of the white settlers and permanently banished the spectre of Indian disorders. A year later was established a territorial judiciary. Then followed a parliamentary struggle for the control of the purse. In quick succession came the Advisory Council, the Executive Committee, the Executive Council. In this contest between representatives of the settlers and the Dominion officials victory lay with the people and with the cause of popular government. It was not, however, till 1897, on the eve of a remarkable growth in population and economic development, that the government of the Territories, which for half a decade had been giving expression to the people's will, was made completely responsible in form as it had already been in fact.

The increased volume of immigration necessitated heavier expenditures upon education, public works and local administration. It was impossible to introduce municipal organizations into many districts outside the limits of the denser settlements. The result was to impose upon the Territorial Government excessive burdens. Financial embarrassments gave rise to constitutional aspirations. Finally, after a prolonged agitation, the Saskatchewan and Alberta Acts provided for the erection on September 1st, 1905, of two provinces, Saskatchewan and Alberta.

Provincial Constitutions.—The Constitutions of the Prairie Provinces are determined by the following Acts and their amendments: the British North America Act, the Manitoba Act (33 Vict., c. 3), the Saskatchewan Act (4-5 Edw. VII, c. 42), and the Alberta Act (4-5 Edw. VII, c. 3).

Executive Power.—Each province has a Lieutenant-Governor, appointed by the Dominion Government, who holds office for five years. Within his term he is not removable except for cause assigned, communicated to him in writing. His powers are exercised in accordance with the principles of responsible government, with the advice and consent of the provincial cabinet.

Each province has in its cabinet a Minister of Public Works, an Attorney-General, a Minister of Agriculture, a Provincial Treasurer, a Minister of Education and a Provincial Secretary. A feature peculiar to the prairie provinces is the Department of Municipal Affairs under the supervision of a Minister in Saskatchewan and Alberta, of a Commissioner in Manitoba. More than one department or sub-department is frequently under one responsible minister.

Legislative Power.—Each province has a Legislature consisting of the Lieutenant-Governor and the Legislative Assembly. There must be a yearly session. Though the Assembly may be dissolved at any time it must not continue longer than a fixed period of years after a general election. Section 92 of the British North America Act enumerates the exclusive powers of the Provincial Legislatures.[1]

Growth of Municipal Institutions.

Manitoba.—The stages in the growth of municipal institutions in the province of Manitoba are marked by the legislation of the years 1871, 1873, 1882 and 1900. In 1871 the County Assessment Act and the Parish Assessment Act made provision for dealing with local finance. The former concerned the tax roll of the province; the latter, purely local improvements and assessments for the parishes within each of the five counties. An Act of 1873 provided for the erection of a local municipality in districts containing not less than 30 freeholders. In 1883 the province was divided into 26 counties and three judicial districts. This Act copied closely the Ontario Act of 1849. In the working out of the Act it was found to be in many particulars unsuited to Western conditions. By the General Municipal Act of 1900 every city, town, village and rural municipality became a body corporate. Over all, excepting cities having separate charters of incorporation, of which there are three, Winnipeg, St. Boniface and Portage-la-Prairie, is the general supervision of a Department of Municipal Affairs, presided over by a Minister of the executive government called "The Municipal Commissioner." By legislation enacted in 1921 a "Tax Commission" was established in the province; its chief duties are to improve the character of municipal assessment throughout the province, especially in rural areas, which theretofore had been lax, unfair between ratepayers, and unreliable for general statistical purposes.

Northwest Territories (Saskatchewan and Alberta).—As early as 1884 we find among the Ordinances of the Northwest Territories one "respecting Municipalities." This contained provisions for the establishment of certain rural municipalities and the municipalities of the town of Regina, the town of Moosejaw, etc. Only a limited number of rural municipalities found practical existence under this Ordinance, which was planned on principles similar to those of the older provinces. In 1896 legislation was passed de-organizing certain of the rural municipalities where the system proved unpopular. In

[1] See page 6 for a résumé of the powers of the Provincial Legislatures.

1897 the Legislature of the Territories passed a Statute Labour Ordinance. The year following produced the Local Improvement Ordinance which, with its amendments, was the law observed until 1904. The average area of each local improvement district was one township. In 1903 a new local Improvement Bill de-organized all one-township local improvement districts and abolished the provision for statute labour. The new Bill provided for local improvement districts with an area of four townships, each of which was a division electing a councillor annually. The four thus secured formed a Council Board. In 1904 the Legislature made financial provision for inquiry into municipal organizations in general in order to provide a safe, economical system of rural municipalities and to improve the ordinance under which cities, towns and villages were administered. The breaking up of the Territories in 1905 into the present provinces of Alberta and Saskatchewan caused delays; but municipal commissions with urban and rural sections were appointed. As a result of the experience gathered during territorial days and later, and of the findings of these Commissions, Local Improvement Acts were amended, Rural Municipality, Town and Village Acts were passed in both provinces, and a City Act was passed in the province of Saskatchewan.

Municipal Government.—The school district constitutes at once the most important and elementary unit of self-government on the prairies. Of municipal organization there are generally five different forms: (a) Improvement Districts; (b) Rural Municipalities; (c) Villages; (d) Towns; (e) Cities.

Alberta has five forms of municipal organization, Improvement Districts, Municipal Districts, Villages, Towns, Cities. Improvement Districts are administered by the Department of Municipal Affairs. Each city is governed by the provisions of its own charter.

In Manitoba the term "Improvement District" is used to denote a portion of a rural municipality or incorporated village formed into a particular territory to provide for local improvements.

School Districts.—The school district is the local organization for the support and administration of educational affairs. In each of the three Prairie Provinces its organization is somewhat different according as it is a rural, village, town or city or consolidated district, but the most common of these, the rural district, is in all three provinces governed by a board of three trustees elected by the ratepayers for three years, one being elected and one retiring annually. In Manitoba there is in addition to the types of district mentioned, a rural municipality school organization, being an aggregation of rural schools under one board of trustees.

Improvement Districts.—These consist, except in Manitoba, of those sparsely settled areas where there exists either no municipal organization whatever or organization of a very simplified and elementary character. As a rule each local improvement district has exactly the same area as the rural municipality into which it may subsequently be transformed. This is generally the territorial unit of 18 miles

square or nine townships. The form and size of these units occasionally vary to fit into the physical features of the country. The local improvement district is not regarded as a permanent organization. In Saskatchewan, the local improvement, public revenues and wild lands taxes are collected by the Department of Municipal Affairs. The local improvement taxes are expended for public works through the Department of Highways in the particular local improvement district in which they are collected. A certain portion of these taxes is also expended for wolf bounties and the extermination of gophers and grasshoppers.

Rural Municipalities.—The rural municipality is a permanent institution and a body corporate. It passes by-laws for the general welfare of the community. These relate to such matters as public health, nuisance grounds, cemeteries, hospitals, granting aid to the sick and worthy indigent, providing for tree planting in public places, imposing fines for light weight and short measurements, preventing cruelty to animals, restraining the running at large of dogs, the application of herd and pound laws, preventing prairie fires, licensing hawkers and pedlars, regulating speed on highways, granting aid to agricultural societies, the destruction of noxious weeds, the acquiring of land for public purposes, the erection of municipal buildings and similar matters. It has charge of the collection of school taxes in rural districts within the limits of the municipality. In order to perform permanent improvements a rural municipality can borrow by debentures.

The rural municipalities have authority to collect certain license fees, but taxation constitutes their principal source of revenue. Each council appoints its own auditor, but the books of the municipality are subject to departmental inspection. Under conditions that vary with the provinces the electors of the municipalities may vote to come into provincial, group or co-operative hail insurance schemes. They are not allowed to bonus railways or commercial enterprises of any kind. The method of election varies with the provinces. In Alberta, for instance, the council is generally elected at large by the electors of the municipality, though the council may, by by-law approved by a majority of the electors, provide for the election of councillors by divisions, and the reeve is chosen at the first meeting of the council; in Saskatchewan the reeve only is elected at large and each of the six councillors is chosen by a division of a township and a half; in Manitoba the Council consists of the reeve and six or four councillors as determined by by-law. A secretary-treasurer appointed by the council levies the assessment and collects the taxes.

Villages.—In Saskatchewan 50 people must be actually resident in a hamlet before it can claim village incorporation. The number is counted by a person sent from the Department of Municipal Affairs. Each village shall levy, for taxation purposes, on land at its fair actual value, and on buildings and improvements at 60 p.c. of their value, but if two-thirds of the resident ratepayers desire, by written petition, that the assessment shall be based on land values only, the council may pass a by-law to that effect.

Under the Village Act of Alberta, a village is not a corporate body and has only very limited powers. A village may be established where there is any centre of population containing 25 occupied dwelling-houses within an area not greater than 640 acres. The tax, which may not exceed 2 cents on the dollar, must be levied on the actual value of the lands in the village exclusive of the improvements thereon. A village may impose a business tax. It may assess improvements up to 50 p.c. of their value and must do so if any debenture payment owing by the village is in arrears. A village may borrow money by debentures after obtaining authority from the Minister of Municipal Affairs.

In Manitoba, villages, as in the case of towns and cities, excepting Winnipeg and St. Boniface, are incorporated under the Municipality Act. A village must have 500 inhabitants within 640 acres. The census is taken under the direction of the council of the municipality. The council consists of the mayor and four councillors. The village council, as in the case of the council of every municipality in Manitoba, may pass by-laws for exempting any industry in whole or in part from taxation for any period not exceeding 20 years.

Towns.—In Saskatchewan a village must have at least 500 people actually resident therein, in order to become a town. The census must be taken by an official of the Department. Land is assessed at its fair actual value and improvements at not more than 60 p.c. of their value. A town may impose a tax on personal property and may also impose an income tax. It may also impose a tax on improvements and must do so if any debentures owing by the town are in arrears. Power has been given to establish parks and recreation grounds, skating and curling rinks.

In Alberta a village having 700 residents may be established as a town. The Act requires that all taxes must be derived from an assessment levied according to the actual cash value of the land without regard to any improvements made thereon by the expenditure of capital or labour.

In Manitoba a locality containing over 1,500 inhabitants may be erected into a town on petition. The council consists of the mayor and two councillors from each ward.

Cities.—In Alberta there is no City Act. The different cities in the province carry on business each under its own special charter. Accordingly the methods differ in the different cities. Where in other provinces common regulations exist, here can only be observed tendencies. They are strongly inclined to own their own utilities, not to give franchises and to exempt personal property and incomes from taxation. Buildings and improvements are assessed for a percentage of their value and taxed on this percentage, which varies in different cities.

In Saskatchewan towns must have a population of 5,000 to become cities. A general City Act governs in each case. This strictly prohibits the granting of bonuses. A Saskatchewan city may at its own volition assess land values, exempting buildings and improvements, but the change must be gradual. Land is assessed at its fair actual value and buildings at not more than 60 p.c. of their value.

The three provinces of the prairies have each a different method in regard to the appointment of city commissioners. In Manitoba is found the board of control, in Saskatchewan the appointed commissioner, in Alberta the elected commissioner and appointed commissioner.

In Manitoba, a town containing over 10,000 inhabitants may be erected into a city with a council consisting of the mayor and two aldermen from each ward.

In all three provinces, cities, towns, villages and rural municipalities may pass by-laws for contracting debts by borrowing money or otherwise, and, if necessary, for issuing debentures for certain specified purposes, but in all cases the by-laws for borrowing money must receive the assent of the electors. Particularly in connection with the smaller municipalities the limit of debt is specifically stated in the various acts governing the cases.

The legislative powers of the councils of municipalities in the three prairie provinces are in the main the same,—acquiring property for municipal or public purposes, taking census, appointing engineers, constables and other officers, enforcement of by-laws, regulations regarding public health and comfort, public safety, public order and morality, protection from fire, care of children, regulation of streets and public places, drainage and sewerage, fences, dairies, water supply, matters relating to agriculture, public fairs, animals, dog taxes, impounding, cemeteries, coal and wood supply, libraries, advertising, markets, boards of trade, trades and occupations, licensing travellers for commercial houses, street numbering and similar matters.

BRITISH COLUMBIA.

By John Hosie, Victoria, B.C.

British Columbia entered Confederation on July 20, 1871, and has a local constitution similar to that of the other provinces. The province had been constituted in 1866 by the union of the colony of Vancouver Island and its dependencies (where a government had been established in 1849) with that of British Columbia, which dated from 1858. Local responsible government began before Confederation, but previously the colonies had been administered by two mixed elective and appointed councils.

Executive.—The Lieutenant-Governor and a cabinet not to exceed twelve ministers constitute the present administration. The cabinet is composed of the following: the Premier, who is also Minister of Railways and President of the Council; Attorney-General and Minister of Labour; Minister of Finance and Minister of Industries; Provincial Secretary and Minister of Education; Minister of Lands; Minister of Mines and Commissioner of Fisheries; Minister of Public Works; Minister of Agriculture. With the exception of the Premier, who holds two other offices and receives $9,000 a year in respect of his position as Premier only (the portfolio of President of the Council is unpaid), each minister receives $7,500 a year. The first cabinet after Confederation consisted of five members. In 1900 the Department

of Mines was separated from other portfolios, with a Minister of its own, but the Fisheries Department is now associated with that of Mines. Lands and Public Works, which had long been under one Minister, were separated in 1908. In 1916, Agriculture, previously under the jurisdiction of the Minister of Finance, became a Department with a Minister of its own.

Legislative.—Unlike Quebec and Nova Scotia, British Columbia has a single chamber legislature, consisting of 47 members. The first Assembly after Confederation had 25 members, but redistribution has been necessitated from time to time by increase of population, especially in the cities. Vancouver's representation has been increased from 2 members in 1894 to 6 at present, elected at large. Victoria returns 4 members, while the other 36 ridings are one-member constituencies. The term of the Legislative Assembly, formerly four years, was increased to five years in 1913 by amendment to the Constitution Act. The sessional indemnity of members is $2,000, and an allowance of $2,000 is made to the recognized leader of the opposition in addition to his indemnity. The Speaker's additional allowance is $1,800, and that of the Deputy-Speaker $500.

Judicial.—The courts of the Province in the order of authority are as follows:

1. Court of Appeal, consisting of a Chief Justice and four puisne judges styled Justices of Appeal. The appellate jurisdiction of this Court is wide, covering appeals from all judgments and orders of the Supreme Court, appeals from the County Courts, appeals from the opinion of a Judge of the Supreme Court on constitutional questions referred to him by the Lieutenant-Governor in Council, etc. It is also the Court of Appeal for the Province in all criminal cases under the Criminal Code of Canada.

2. The Supreme Court, consisting of a chief justice and five puisne judges. It has general jurisdiction throughout the Province as a superior Court of Record, and there are certain appeals under provincial legislation which are heard before it. Its jurisdiction is exercisable by each individual judge as and for the Court.

3. County Courts, of which there are nine. These have jurisdiction in all personal actions where the amount involved does not exceed $1,000; in actions of ejectment where the value of the premises does not exceed $2,500; in equity cases where the amount involved does not exceed $2,500. They have wide jurisdiction under the provincial mining acts, and upon appeals from Small Debts Courts. The administration of criminal justice is also largely in their hands.

4. Small Debts Courts, with jurisdiction in personal actions up to $100. They are presided over by judges appointed by the provincial government.

In addition to above Courts there are many stipendiary magistrates and justices of the peace, exercising a more or less limited jurisdiction under the Criminal Code of Canada as well as under the Summary Convictions Act.

Police.—Under the Attorney-General are the Provincial Police, with general jurisdiction, maintaining order in the unorganized districts, looking after the Indians, lending assistance to local authorities in the pursuit of criminals, and co-operating when need arises with the Royal Canadian Mounted Police. There are the usual detective and constabulary forces maintained by the municipalities.

Agriculture.—The Department of Agriculture is organized with a minister, a deputy minister and various heads of branches, including a live stock commissioner, provincial horticulturist, instructors in poultry raising, inspectors of fruit pests, market commissioner, veterinary inspectors, dairy commissioner, plant pathologist, and soil and crop experts.

Land Settlement Board.—The Land Settlement Board created in 1917, has power to take over from the Crown and to acquire from private owners, either by purchase or compulsorily, land within the Province for agricultural purposes, to develop such land and erect buildings thereon and to sell or lease said lands, etc. Loans may be made for acquiring lands for agricultural purposes, satisfaction of encumbrances on same, clearing, draining, dyking, water storage, irrigation works, erection of farm buildings, purchase of live stock, etc. Loans must be secured by first mortgages on surveyed agricultural lands, and must not exceed 60 per cent of the appraised value of the property with a minimum of $250 and a maximum to any one borrower of $10,000. Long dated loans on amortizable plan may be for 15, 20, or 25 years. Short dated loans, straight or amortizable, may be made for not less than 3 years and not more than 10 years, and must not exceed $5,000 to any individual, or $10,000 to an association.

Lands.—The Department of Lands is under a minister and deputy minister, a surveyor-general, chief forester, geographer, irrigation supervisors, superintendent of soldiers' settlement, and other officials. It maintains a forest protection service, with a staff of rangers to guard against the destruction of timber by forest fires. From time to time areas have been withdrawn from sale and reserved for pre-emption or homesteads. By legislation of 1916, the lands previously sold on deferred payments, on which unpaid amounts remained, reverted to the extent of the amount unpaid for, and are held as homesteads for returned soldiers. Under the provincial returned soldiers' land settlement scheme various concessions are made to returned men taking up land, and this, in conjunction with the Dominion provisions of a like nature, has resulted in the successful placement of many men, sometimes in colonies or groups (as at Merville and Creston) or individually. Similarly, a large number of returned men have availed themselves of the advantages of the Better Housing Act, 1919.

Fisheries.—The administration of the fisheries is in the hands of the Commissioner of Fisheries, who is also Minister of Mines. Among other things the department regulates the fish canneries, the inland fisheries, and in co-operation with the federal authorities

maintains stations and a staff for the study of the habits of fish, methods of propagation, preservation and protection.

Education.—The Department of Education is under a Minister who is also Provincial Secretary. The Superintendent of Education has the rank of a deputy minister. Supervision is in the hands of two high school inspectors, sixteen inspectors of schools, and one inspector of manual training schools. The system is non-sectarian. Attendance is compulsory from the age of 7 to 14. The provincial university was authorized by legislation in 1908, but was not opened until 1915. It confers degrees in Arts, Applied Science and Agriculture, and has power to grant degrees in all branches except theology.

Other educational institutions include two normal schools and over forty high schools. There are also night schools for instruction in academic and technical subjects. Manual training and household science departments are in operation in many high schools and elementary schools.

The maintenance of all city and town schools, and a large majority of the rural schools, is provided for by local or district assessment, supplemented by grants from the provincial treasury. Control of these schools is vested in the local authorities, subject to the regulations of the department. There are, however, in the more scattered districts, certain rural schools which are more directly under the control of the government. Cities and organized municipalities elect their boards by popular vote. These boards appoint municipal inspectors and other officers.

Municipal Government.—Local administration is at present based on the Municipal Act and amending statutes, together with the Village Municipalities Act. Large powers of local self-government are conferred by the existing system. An urban municipality may be formed by a community of not less than 100 male British subjects, provided the owners of more than half of the land petition for it. District municipalities may be organized by 30 resident male British subjects of full age. Village municipalities may be formed by petition where the number of residents does not exceed 1,000, but the provisions of the Municipal Act shall not apply thereto. The city organizations are of the same general type, differing only in details. In all, the chief executive officer is the mayor, and all have elective councils.

The Municipal Act has provision for the Board of Control, but neither this nor the Commission system is in operation. All the larger cities have dropped the ward system. Vancouver, the largest city, has reduced its council to eight members. The municipal franchise for ordinary purposes is open to adult male residents and to female householders and real estate owners. Only owners of real estate, male or female, may vote on money by-laws. Such by-laws are necessary for expenditures beyond the ordinary revenue, requiring the issue of debentures. They require a three-fifths majority of the votes cast.

The chief executive of a district municipality is the reeve. In most other respects the district municipality is similar to the city government. In cities, with the exception of Vancouver, the police are under the authority of a commission, composed of the mayor and two members elected in the same manner and at the same time as the mayor and aldermen or councillors. Vancouver's police commission is composed of three members, the mayor and two members appointed by the Lieutenant-Governor in Council, one of whom must be a member of the city council.

While the general municipal system is established by common legislation, several municipalities have secured certain modifications by special enactment. Each has its own system of assessment and taxation. Vancouver, for example, levies taxes upon fifty per cent of the value of improvements.

Under the Municipal Cemeteries Act, 1921, municipalities are given power to establish cemeteries, mausoleums and crematoriums. Two or more municipalities may act together in the matter, with a joint board of control appointed by the respective councils.

Aid is now given the municipalities from the receipts from Government sale of liquor, from receipts for motor licenses, and from a newly imposed tax on betting at race meetings. The apportionment of such moneys is on a basis of population.

Provincial Taxes.—British Columbia imposes direct taxation on its natural resources. These taxes include a small assessment on real and personal property, wild land, timber and coal land, also a graduated income tax, taxes on corporations, succession duties, and other license fees.

III.—CHRONOLOGICAL HISTORY OF CANADA.

1497 TO 1921.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovers Hudson Strait.
1501. Gaspar Corte Real visits Newfoundland and Labrador.
1524. Verrazano explores the coast of Nova Scotia.
1534. June 21, Landing of Jacques Cartier at Esquimaux Bay.
1535. Cartier's second voyage. He ascends the St. Lawrence to Stadacona (Quebec) (Sept. 14) and Hochelaga (Montreal) (Oct. 2).
1541. Cartier's third voyage.
1542–3. De Roberval and his party winter at Cap Rouge, and are rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovers Lake Champlain.
1610–11. Hudson explores Hudson Bay and James Bay.
1611. Brulé ascends the Ottawa River.
1612. Oct. 15, Champlain made lieutenant-general of New France.

Dominion Parliament. June 6, Death of Sir J. A. Macdonald. June 15, Sir John Abbott premier.

1892. Feb. 29, Washington Treaty, providing for arbitration of the Behring Sea Seal Fisheries question. July 22, Boundary convention between Canada and the United States. Nov. 25, Sir John Thompson premier.

1893. April 4, First sitting of the Behring Sea Arbitration Court. May 22, The Earl of Aberdeen governor-general. Dec. 18, Archbishop Machray, of Rupert's Land, elected first Anglican primate of all Canada.

1894. June 28, Colonial Conference at Ottawa. Dec. 12, Death of Sir John Thompson at Windsor Castle. Dec. 21, (Sir) Mackenzie Bowell premier.

1895. Sept. 10,Opening of new Sault Ste. Marie canal. Oct. 2, Proclamation naming the Ungava, Franklin, Mackenzie and Yukon Districts of Northwest Territories.

1896. April 24, Sir Donald Smith (Lord Strathcona) high commissioner in London. April 27, Sir Charles Tupper premier. July 11, (Sir) Wilfrid Laurier premier. Aug., Gold discovered in the Klondyke. Aug. 19, Opening of the eighth Dominion Parliament.

1897. July, Third Colonial Conference in London. Dec. 17, Award of the Behring Sea Arbitration.

1898. June 13, The Yukon District established as a separate territory by Act of Parliament. July 30, The Earl of Minto governor-general. Aug. 1, The British Preferential Tariff of Canada goes into force. Aug. 23, Meeting at Quebec of the Joint High Commission for the settlement of questions between Canada and the United States. Dec. 25, British Imperial Penny (2 cent) Postage introduced.

1899. Oct. 11, Beginning of the South African War. Oct. 14, Canadian Government decides to send troops to South Africa. Oct. 29, First Canadian contingent leaves Quebec for South Africa.

1900. Feb. 27, Battle of Paardeberg. April 26, Great fire at Ottawa and Hull.

1901. Jan. 22, Death of Queen Victoria and accession of King Edward VII. Feb. 6, Opening of the ninth Dominion Parliament. April 1, Census of the British Empire, total population, 397,659,316; Canada (Fourth Dominion census), 5,371,315. Sept. 16-Oct. 21, Visit to Canada of the Duke and Duchess of Cornwall and York (King George V and Queen Mary).

1902. May 31, End of South African War, peace signed at Vereeniging. June 30, Meeting of fourth Colonial Conference in London.

1903. Jan. 24, Signing of the Alaska Boundary Convention. June 19, Incorporation of Regina. Oct. 20, Award of the Alaskan Boundary Commission.

1904. Feb. 1, Dominion Railway Commission established under the Railway Act of 1903. April 19, Great fire in Toronto. Sept. 26, Earl Grey governor-general. Oct, 8, Incorporation of Edmonton.

1905. Jan. 11, Opening of the tenth Dominion Parliament. Sept. 1, Creation of the provinces of Alberta and Saskatchewan.

1906. University of Alberta founded. Oct. 8, Interprovincial Conference at Ottawa.

1907. March 22, Industrial Disputes Investigation Act passed. April 15-May 14, Fifth Colonial Conference in London. Adjustment of Parliamentary representation in Saskatchewan and Alberta. New Customs Tariff including introduction of Intermediate Tariff. Aug. 29, Collapse of Quebec Bridge. Sept. 19, new Commercial Convention with France signed at Paris. Oct. 17, First message by wireless telegraphy between Canada and the United Kingdom. University of Saskatchewan founded.

1908. Jan. 2, Establishment of Ottawa branch of Royal Mint. April 11, Arbitration treaty between United Kingdom and United States. May 4, Ratification of Treaty for demarcation of boundary between Canada and United States. June 21-23, Bicentenary of Bishop Laval celebrated at Quebec. July 20-31, Quebec tercentenary celebrations: visit to Quebec of Prince of Wales, representing the King. Aug. 2, Great fire in Kootenay Valley, B.C. University of British Columbia founded.

1909. Jan. 11, Signing of International Boundary Waters Convention between Canada and United States. Jan. 20, opening of 11th Dominion Parliament. Jan. 27, Agreement between United Kingdom and United States to submit North Atlantic Coast Fisheries question to the Hague Tribunal. May 19, Appointment of Canadian Commission of Conservation. July 28, Conference on Imperial Defence in London.

1910. Feb. 1, Ratification of Commercial Treaty with France. Feb. 1, International Opium Commission met at Shanghai. May 4, Passing of Naval Service Bill. May 6, Death of King Edward VII and accession of King George V. June 7, Death of Goldwin Smith. Sept. 7, North Atlantic Coast Fisheries Arbitration award of the Hague Tribunal. New trade agreement made with Germany, Belgium, Holland and Italy.

1911. Jan. 21, Proposals for reciprocity with United States submitted to the Canadian Parliament. Mar. 21, Duke of Connaught appointed governor-general of Canada. May 23-June 20, Imperial Conference in London. June 1, Fifth Dominion census. July 11, Disastrous forest fires in Porcupine mining district. Sept. 21, General election of Dominion Parliament. Oct. 10 (Sir) R. L. Borden, premier. Oct. 11, Inauguration at Kitchener of Ontario Hydro-Electric Power Transmission System. Oct. 13, The Duke and Duchess of Connaught land at Quebec. Nov. 15, Opening of 12th Dominion Parliament.

1912. April 15, Loss of the steamship *Titanic*. April 15, Appointment of Dominions Royal Commission. May 15, Extension of the boundaries of Quebec, Ontario and Manitoba. June 17, Judgment delivered by the Imperial Privy Council on the marriage question raised by the *ne temere* decree.

1913. April 10, Japanese Treaty Act assented to. June 2, Trade agreement with West Indies came into force. July 26, King's Prize at Bisley won by Canadian. September 1-3, Visit to Montreal of British Lord Chancellor (Viscount Haldane). Oct. 4, New customs tariff of United States goes into force.

1914. Jan. 21, Death of Lord Strathcona and Mount Royal, aged 94. May 29, Loss of the steamship *Empress of Ireland*. Aug. 3, Acquisition by Canada of two submarines on the Pacific Coast. War with Germany, Aug. 4; with Austria-Hungary, Aug. 12; and with Turkey, Nov. 5. Aug. 18-22, special war session of Canadian Parliament. Oct 16, First Canadian contingent of over 33,000 troops land at Plymouth, Eng. Nov. 1, Loss of four Canadian midshipmen by sinking of H.M.S. *Cape of Good Hope* in action off the coast of Chile.

1915. Feb., First Canadian contingent lands in France and proceeds to Flanders. April 22, Second battle of Ypres. April 24, Battle of St. Julien. May 20-26, Battle of Festubert. June 15, Battle of Givenchy; gallantry of Canadian troops highly eulogized by F.-M. Sir John French. July 14, Sir Robert Borden attends meeting of the British Cabinet. Oct. 30, Death of Sir Charles Tupper, Bt. Nov. 22, Issue of Canadian War Loan of $50,000,000. Nov. 30, war loan increased to $100,000,000.

1916. Jan. 12, Order in Council authorizing increase in number of Canadian troops to 500,000. Feb. 3, Destruction of the Houses of Parliament at Ottawa by fire. April 3-20, Battle of St. Eloi. June 1, Census of prairie provinces. June 1-3, Battle of Sanctuary Wood. June 3, Order in Council establishing Board of Pension Commissioners. Sept. 1, Cornerstone of new Houses of Parliament laid by Duke of Connaught. Sept., Issue of second war loan, $100,000,000. Oct. 16, Duke of Connaught left Canada on completion of term of office as governor-general. Nov. 11, Duke of Devonshire (appointed Aug. 19) sworn in at Halifax, N.S., as governor-general.

1917. Feb. 12-May 15, Visit to England of Prime Minister and colleagues for Imperial Conference. Feb. 21, Final Report of Dominions Royal Commission. March,

Third war loan, $150,000,000. March 20-May 2, Meetings in London of Imperial War Cabinet. March 21-April 27, Imperial War Conference. March 31, Canadian patriotic contributions amount to $49,271,012. April 5, Declaration of war against Germany by United States. April 9, Capture of Vimy Ridge. April 16, Wheat placed on free list. June 11, Appointment of Board of Grain Supervisors with power to fix grain prices. June 21, Appointment of Food Controller under Order in Council of June 16. July 1, Jubilee of Confederation, 1867. Aug. 15, Battle of Loos, capture of Hill 70. Aug. 29, Passing of Military Service Act. Sept. 20, Completion of structure of Quebec bridge. Sept. 20, Parliamentary franchise extended to women: Dominion Government authorized to purchase 600,000 shares of C.N.R. Oct. 4, Battle of Passchendaele. Oct. 6, Dissolution of 12th Parliament. Nov. 12, Fourth war loan (Victory Bonds). Dec. 6, Disastrous explosion at Halifax, N.S., caused by collision between the *Imo* and the *Mont Blanc*, laden with powerful explosives. Dec. 17, General election and Union Government sustained.

1918. Feb. 23, Appointment of Canada Registration Board. Mar. 18, Opening of first session of 13th Parliament. Mar. 21, Germans launch critical offensive on west front. Mar. 30, Gen. Foch appointed generalissimo. Mar.-April, second battle of the Somme. April 17, Secret session of Parliament. May 23, Parliament prorogued. June-July, Prime Minister and colleagues attend Imperial War Conferences in London. July 18, Allies assume successful offensive on west front. Aug. 12, Battle of Amiens. Aug. 26-28, Capture of Monchy le Preux. Sept. 2–4, Breaking of Drocourt-Quéant line. Sept. 16, Austrian peace note. Sept. 19, Establishment of Khaki University of Canada. Sept. 27-29, Crossing of Canal du Nord and capture of Bourlon Wood. Sept. 30, Bulgaria surrenders and signs armistice, Oct. 1–9, Capture of Cambrai. Oct. 5, Epidemic of Spanish influenza causing closing of churches and abandonment of public meetings. Oct. 6, First German peace note. Oct. 20, Capture of Denain. Oct. 21, Appointment of Siberian Economic Commission. Oct. 25-Nov. 2, Capture of Valenciennes. Oct. 28, Issue of fifth war loan for $300,000,000 in the form of Victory Bonds. Oct. 31, Turkey surrenders and signs armistice. Nov. 4, Austria-Hungary surrenders and signs armistice. Nov. 10, flight into Holland of German Emperor. Capture of Mons. Nov. 11, Germany surrenders and signs armistice. Spontaneous rejoicings throughout the Empire at the prospect of victorious peace. Dec. 1, National thanksgiving services for victory and peace.

1919. Feb. 17, Death of Sir Wilfrid Laurier. Feb. 20-July 7, Second session of 13th Parliament of Canada. Mar. 7, Appointment of government receiver of the Grand Trunk Pacific railway. May 1-June 15, Great strike at Winnipeg and strikes in other Western cities. May 26, Return to Canada of Prime Minister from Peace Conference. June 23, General election in Quebec, resulting in retention of Liberal administration. June 28, Signature at Versailles of Peace Treaty and Protocol; Canadian Plenipotentiaries: the Hon. Charles J. Doherty and the Hon. Arthur L. Sifton. July 24, General election in Prince Edward Island, resulting in defeat of Conservative administration. Aug. 5-7, Meeting at Ottawa of Liberal convention and election of the Hon. W. L. Mackenzie King as leader of Liberal party. Aug. 15, Arrival at St. John, N.B., of H.R.H. the Prince of Wales for official tour in Canada. Aug. 22, Formal opening of Quebec Bridge by H.R.H. the Prince of Wales. Sept. 1, H.R.H., the Prince of Wales lays foundation stone of tower of new Parliament Buildings at Ottawa. Sept. 1-Nov. 10, Third or special peace session of 13th Parliament of Canada. Sept. 15, Opening at Ottawa of the National Indus-

trial Conference. Oct. 20, General election in Ontario, resulting in defeat of Conservative administration and formation of Ministry by E. C. Drury, United Farmers' Organization. Issue of sixth war loan for $300,000,000 in the form of Victory Bonds. Nov. 25, H.R.H. the Prince of Wales sails from Halifax, N.S. on completion of visit to Canada. Dec. 20, Organization of "Canadian National Railways" by Order in Council.

1920. Jan. 10, Ratifications of the Treaty of Versailles having been exchanged, the war with Germany is officially declared at an end. Feb. 19, Grand Trunk shareholders ratify agreement for sale of the Grand Trunk railway to the Dominion Government. Feb. 26-July 1, Fourth session of the thirteenth Parliament of Canada. May 18, Budget speech. New taxation imposed, estimated to yield an additional $100,000,000 of annual revenue. May 31-June 18, Trade Conference at Ottawa between Dominion and West Indian Governments. June 7-19, Convention of American Federation of Labour at Montreal. June 29, Provincial general election in Manitoba. New political groups hold balance of power, but Liberal government is retained in office. July 8, Sir Lomer Gouin is succeeded by Hon. L. A. Taschereau as Premier of Quebec. July 10, Sir Robert Borden is succeeded by Hon. (now Right Hon.) Arthur Meighen as Premier of Canada. July 16, Ratifications of the Treaty of St. Germain-en-Laye having been exchanged, the war with Austria is officially declared at an end. July 27, Provincial general election in Nova Scotia. Liberal government of Premier Murray is sustained. Aug. 5-7, Imperial Press Conference at Ottawa. Aug. 9, Ratifications of the Treaty of Neuilly-sur-Seine having been exchanged, the war with Bulgaria is officially declared at an end. Sept. 18-23, Ninth Congress of Chambers of Commerce of the Empire at Toronto. Oct. 9, Provincial general election in New Brunswick. Liberal government is sustained by a reduced majority. Oct. 20, Prohibition defeated and Government control of the liquor traffic favoured by referendum in British Columbia. Oct. 25, Referendum re complete prohibition of the liquor traffic is carried in Nova Scotia, Manitoba, Saskatchewan and Alberta. Nov. 15, First meeting of League of Nations Assembly begins at Geneva, Switzerland. Rt. Hon. Sir Geo. E. Foster, G.C.M.G., Rt. Hon. C. J. Doherty and Hon. N. W. Rowell representing Canada. M. Hymans of Belgium is elected president. Nov. 24, McGill University Centennial Endowment Fund is closed with over $6,000,000 subscribed. Dec. 1, Provincial general election in British Columbia. Liberal government is sustained by a reduced majority.

1921. Feb. 14-June 4, Fifth Session of Thirteenth Parliament of Canada. April 18, Ontario votes for prohibition of the manufacture, importation and sale of alcoholic liquors. May 1, Government control of liquor traffic becomes effective in Quebec. May 9, Budget speech in House of Commons. Sales tax and excise duty on liquors increased. May 10, Preferential tariff arrangement with British West Indies becomes effective. June 20-August 5, Imperial Conference, at which Canada is represented by Rt. Hon. Arthur Meighen. June 9, At general election in Saskatchewan, Liberal government is sustained. July 18, At general election in Alberta, the United Farmers secure majority of seats. Sept. 5-Oct. 5, Second meeting of Assembly of League of Nations at Geneva; Canada represented by Rt. Hon. C. J. Doherty. Sept. 21, Members of reorganized Meighen Cabinet sworn in. Nov. 11, Opening of conference on limitation of armament at Washington, Sir Robt. Borden representing Canada. Dec. 6, Dominion general election. Meighen government defeated. Dec. 29, New ministry (Liberal), with Hon. (now Right Hon.) W. L. Mackenzie King as premier, is sworn in.

IV.—PHYSICAL CHARACTERISTICS OF CANADA.

GEOGRAPHICAL FEATURES.

Situation.—The Dominion of Canada includes the whole of the northern half of the North American continent, except the United States territory of Alaska and the Labrador coast,which is under the jurisdiction of Newfoundland. The southernmost point in the Dominion is Middle island in lake Erie, south of Pelee island, in north latitude 41° 41′; from here Canadian territory extends northward toward the pole. In longitude the Dominion stretches from about west longitude 57°—the exact boundary with Newfoundland territory is as yet undefined—to west longitude 141°, the boundary with Alaska. Canada thus extends over about 84° of longitude and 48° of latitude.

General Formation.—The topographic features of the present surface of the American continent admit of its division, in Canada, into several physiographic provinces. The exposed surface of the old pre-Cambrian continent forms one of the largest divisions and has been called the Canadian Shield, the Archean Peneplain and, in its southern portion, the Laurentian highland. The mountainous country of the west constitutes the Cordilleras, while the mountains of Eastern United States, in their continuation across the border, form the Appalachian Highlands of eastern Canada. The Great Plains, with various subdivisions, occupy the area between the mountainous area of the west and the great, roughened surface of the Canadian Shield. The St. Lawrence lowland lies between the Laurentian and Appalachian highlands. Within the borders of the Canadian Shield an area on the southern margin of Hudson bay has been referred to as the Clay Belt. It occupies a part of the basin that was submerged during the glacial period and covered with a coating of clay which smoothed over its inequalities and concealed most of the underlying rocks. Since its emergence the surface has been but slightly altered by drainage channels cut across it.

Canadian Shield.—The portion of the pre-Cambrian continent whose exposed surface still forms a large part of Canada, has an area of about two and a half million square miles. Its northern border crosses the Arctic archipelago, the eastern lies beyond Baffin island and Labrador and reaches the depressed area occupied by the St. Lawrence river, a short spur or point crossing this valley at the outlet of lake Ontario to join the Adirondack mountains in New York. The southern boundary runs from the spur west to Georgian bay, skirts the north shore of lake Huron and sweeps almost entirely around the ancient depressed area occupied by lake Superior. The western edge, from the lake of the Woods and lake Winnipeg, bears northwest to the western end of lake Athabaska, and passes through the basins occupied by Great Slave and Great Bear lakes, reaching the Arctic ocean east of the Mackenzie River delta. In detail, the surface features of the Canadian Shield are irregular; but, viewed

broadly, it has the conformation of a great plain, depressed toward the centre and in the north and slightly elevated along the eastern and southern borders, where it presents a somewhat steep outward slope. The general elevation in the eastern portion is under 2,000 feet, and over the larger part of the plain is about 1,000 feet. The highest portion is along the northeastern margin where it presents a steep face to the sea.

Cordilleran Region.—The western part of the American continent is more or less mountainous. The Andean chain, which extends throughout the length of South America and broadens out in North America and in Canada, has an average width of over 500 miles. This region is the most elevated in Canada, many of the summits reaching heights of 10,000 feet, with occasional peaks over 13,000 feet above sea-level. The mountainous tract forming the Cordilleras can be divided broadly into three parallel bands; an old series of plateaus and mountains forming the central part, referred to as the Central Belt, a young series of parallel ridges, east of the central plateaus, formed of fault blocks and folds and known as the Eastern Belt and a third division, between the plateau country and the Pacific, called the Western Belt. The Belts are further subdivided as in the following summary:—

Mountain Systems and Ranges in Western Canada.

EASTERN BELT.

SYSTEM.	MOUNTAINS OR PLATEAUS.	RANGE, GROUP OR PLATEAU.
ROCKIES	Rocky mountains	Hughes range, Brisco range, Livingstone range, Palliser range, other ranges and groups.
	Mackenzie mountains	Sayunei range, Tigonankweine range, other ranges and groups.
	Franklin mountains	Un-named ranges and groups.
ARCTIC	Richardson mountains	Un-named ranges and groups.

CENTRAL BELT.

COLUMBIA	Selkirk mountains	Purcell range, McGillivray range, Moyie range, Slocan group, Nelson range, other ranges and groups.
	Monashee mountains	Christina range, Midway group, other ranges and groups.
	Cariboo mountains	Un-named ranges and groups.

CENTRAL BELT.—*Concluded*

SYSTEM.	MOUNTAINS OR PLATEAUS.	RANGE, GROUP OR PLATEAU.
INTERIOR	FRASER PLATEAU	Bonaparte plateau, Arrowstone plateau, other plateaus.
	NECHAKO PLATEAU	Ootsa-François plateau, Nadina mountain, other plateaus.
	UN-NAMED MOUNTAINS AND PLATEAUS	Un-named ranges, groups and plateaus.
CASSIAR	BABINE MOUNTAINS	Un-named ranges and groups.
	STIKINE MOUNTAINS	Klappan range, Groundhog range, other ranges.
	UN-NAMED MOUNTAINS	Un-named ranges and groups.
YUKON	YUKON PLATEAUS	Teslin range, Glenlyon range, Pelly range, un-named ranges and plateaus.
	UN-NAMED MOUNTAINS AND PLATEAUS	Un-named ranges, groups and plateaus.

WESTERN BELT.

SYSTEM.	MOUNTAINS OR PLATEAUS.	RANGE, GROUP OR PLATEAU.
PACIFIC	CASCADE MOUNTAINS	Un-named ranges and groups.
	COAST MOUNTAINS	Tahtsa range, Whitesail range, Telkwa range, un-named ranges.
	BULKLEY MOUNTAINS	Zymoetz range, Seven Sisters group, Rocher Déboulé range, Hudson Bay group.
	UN-NAMED MOUNTAINS	Un-named ranges and groups.
INSULAR	VANCOUVER ISLAND MOUNTAINS	Un-named ranges and groups.
	QUEEN CHARLOTTE MOUNTAINS	
	ST. ELIAS MOUNTAINS (PART)	

Mountain Peaks.—Following is a list of the principal named peaks exceeding 12,000 feet in elevation:—

NAME.	ELEVATION.	LAT.	LONG.	RANGE.
ALBERTA—				
Alberta	12,000	52° 14′	117° 36′	Rocky Mtns.
Forbes	12,000	51° 48′	116° 56′	"
The Twins	12,085	52° 13′	117° 12′	"
BRITISH COLUMBIA—				
Robson	13,068	53° 07′	119° 08′	"
YUKON—				
Augusta	14,900	60° 18′	140° 28′	St. Elias Mtns.
Cook	13,700	60° 10′	139° 59′	"
Hubbard	16,400	60° 21′	139° 02′	"
King	16,971	60° 35′	140° 39′	"
Logan	19,539	60° 51′	140° 21′	"
Lucania	17,147	61° 01′	140° 28′	"
McArthur	14,253	60° 36′	140° 13′	"
Newton	13,860	60° 19′	140° 52′	"
St. Elias	18,000	60° 18′	140° 57′	"
Steele	16,644	61° 06′	140° 19′	"
Strickland	13,818	61° 14′	140° 45′	"
Vancouver	15,617	60° 21′	139° 42′	"
Walsh	14,498	61° 00′	140° 00′	"
Wood	15,885	61° 14′	140° 31′	"

Appalachian Region.—The continuation of the Green mountains of Vermont into Canada may be traced in the Notre Dame mountains, which approach the St. Lawrence below Quebec and, continuing with more easterly trend, form the highland of the Gaspé peninsula. Over a large part these hills hardly attain the dignity of mountains, but peaks rising 3,500 feet above the nearby coast are found in the Gaspé peninsula. The continuation of the White mountains of New Hampshire is found in the highlands of Maine and New Brunswick, the continuity being shown quite plainly by the rock-folding and other evidences of the great earth movements which caused the topography. An additional ridge apparently forms the present province of Nova Scotia, and although the highlands of that province in few places rise to elevations greater than 1,500 feet, the rock structure indicates that it was a mountainous country at no very remote geological period.

Great Plains.—A great area, including many diverse features, lies to the east of the Cordilleras. The portion that is included under the term Great Plains extends from the southwestern edge of the ancient surface forming the Canadian Shield, to the eastern edge of the mountainous region of the Cordilleras. In the belt traversed by the railway lines a three-fold division into prairie steppes, rising

one above the other, is clearly recognizable, though the divisions are not distinguishable in the region farther north to which the term prairie is not applicable. For the purpose of description these three divisions are adopted and a fourth is added for the broken hilly country of the foot-hills. The first or eastern division comprises the plain lying between the Canadian Shield and the plateau formed of Cretaceous sediments; the second extends from the edge of this plateau westward to the erosion remnants of former Tertiary deposits; and the third stretches from this line westward to the foot-hills. North of the prairie country these distinctions are less noticeable, and divisions two and three become merged into one.

St. Lawrence Lowlands.—The southern interior of the continent consists of a plain of low relief, bordered on the east by the Appalachian mountains, on the west by the Cordilleran mountain systems, and on the north by the old surface of the Laurentian plateau. To the northeast this plain becomes reduced in width, and in the vicinity of Quebec is represented by a narrow plateau or shelf on each side of the St. Lawrence river. The triangular area beyond, in which is the island of Anticosti, is structurally related to the central lowlands. The St. Lawrence lowlands may be divided into three sections: (1) the St. Lawrence river plain separated from (2) the Eastern Ontario basin by a point of crystalline rocks, and (3) the Ontario peninsula a slightly more elevated plain whose eastern border is a steep escarpment, the eastern outcrop of a heavy limestone bed which underlies the western peninsula.

Waterways.—The waterways of Canada constitute one of the most remarkable of its geographical features. East of the Rocky mountains the southern part of the Dominion slopes northeastward towards Hudson bay, and the rivers in the south flow eastward. Thus the Saskatchewan river, with its northern and southern branches, flows eastward into lake Winnipeg and thence northward by the Nelson river into Hudson bay. On the north the Great Plain has a northerly slope, and the Mackenzie river, with its tributaries, the Slave, Liard, Athabaska, and Peace rivers, flows into the Arctic ocean. The Mackenzie, exclusive of its tributaries, but including the Slave, Peace and Finlay rivers, of which it is the continuation, has a total length of 2,525 miles. The Yukon river in the Yukon territory also flows northward, passing through Alaska, into Behring strait after a course of 2,300 miles. In British Columbia, the Fraser, Columbia, Skeena and Stikine rivers flow into the Pacific ocean.

Drainage Basins.—The large drainage basins of Canada are the Atlantic (554,000 square miles), the Hudson bay (1,486,000 square miles), the Arctic (1,290,000 square miles), the Pacific (387,300 square miles), and the gulf of Mexico (12,365 square miles). Table **1** gives a list of the river drainage basins, and Table **2** gives the lengths of the principal rivers with their tributaries and sub-tributaries.

1.—Drainage Basins of Canada.

Drainage Basins.	Area Drained.	Drainage Basins.	Area Drained.
Atlantic Basin.	Sq. miles.	**Hudson Bay Basin**—concluded.	Sq. miles.
Hamilton	29,100	Kazan	32,700
Miramichi	5,400	Dubawnt	58,500
St. John	21,500		
St. Lawrence	309,500	**Total**	**1,486,000**
Saguenay	35,900		
St. Maurice	16,200	**Pacific Basin.**	
French	8,000	Yukon	145,800
Nipigon	9,000	Porcupine	24,600
Ottawa	56,700	Stewart	21,900
Lièvre	3,500	Pelly	21,300
Gatineau	9,100	Lewes	35,000
		White	15,000
Total	**554,000**	Alsek	11,200
		Taku	7,600
Hudson Bay Basin.		Stikine	20,300
Koksoak	62,400	Nass	7,400
George	20,000	Skeena	19,300
Big	26,300	Fraser	91,700
Eastmain	25,500	Thompson	21,800
Rupert	15,700	Nechako	15,700
Broadback	9,800	Blackwater	5,600
Nottaway	29,800	Quesnel	4,500
Moose	42,100	Chilcotin	7,500
Abitibi	11,300	Columbia	39,300
Missinaibi	10,600	Kootenay	15,500
Albany	59,800	Okanagan	6,000
Kenogami	20,700	Kettle	3,160
Attawapiskat	18,700	Pend d'Oreille	1,190
Winisk	24,100		
Severn	38,600	**Total**	**387,300**
Hayes	28,000		
Nelson	370,800	**Arctic Basin.**	
Winnipeg	44,000	Backs	47,500
English	20,600	Coppermine	29,100
Red	63,400	Mackenzie	682,000
Assiniboine	52,600	Liard	1,700
Saskatchewan	158,800	Hay	25,700
North Saskatchewan	54,700	Peace	117,100
South Saskatchewan	65,500	Athabaska	58,900
Red Deer	18,300		
Bow	11,100	**Total**	**1,290,000**
Belly	8,900		
Churchill	115,500	**Gulf of Mexico Basin**	**12,365**

NOTE.—Owing to overlapping, the totals of each drainage basin do not represent an addition of the drainage areas as given. Tributaries and sub-tributaries are indicated by indentation of the names.

NOTE.—In the above table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

St. Lawrence River System.—Most important of the lakes and rivers in Canada is the chain of the Great Lakes with their connecting rivers, the St. Lawrence river and its tributaries. This chain is called the St. Lawrence River system. The Great Lakes, separating the province of Ontario from the United States and connected by a series of canals with the St. Lawrence river, allow of access from the Atlantic ocean to the interior of the Dominion at Fort William and Port Arthur, twin cities situated on lake Superior.

The Great Lakes.—Table **3** shows the length, breadth, area, elevation above sea-level and maximum depth of each of the Great Lakes.

3.—Area, Elevation and Depth of the Great Lakes.

Lakes.	Length.	Breadth.	Maximum Depth.	Area.	Elevation above Sea-level.
	Miles.	Miles.	Feet.	Sq. Miles.	Feet.
Superior	254	162	1,008	31,800	602

Erie	239	59	180	10,000	572
Ontario	193	53	738	7,260	246

Lake Superior, with its area of 31,800 square miles, is the largest body of fresh water in the world. As the international boundary between Canada and the United States passes through the centre of lakes Superior, Huron, Erie and Ontario, only half of the areas of these lakes given in the above statement is Canadian. The whole of lake Michigan is within United States territory. From the western end of lake Superior to the mouth of the St. Lawrence there is, with the aid of the canal system, a continuous navigable waterway. The total length of the St. Lawrence river from the head of the St. Louis river to the Pointe-des-Monts, at the entrance of the gulf of St. Lawrence, is 1,900 miles. The tributaries of the St. Lawrence, several of which have themselves important tributaries, include the Ottawa river, 685 miles long; the St. Maurice river, 325 miles long; and the Saguenay (to head of Peribonka), 405 miles long.

Other Inland Waters.—In addition to the Great Lakes there are large bodies of inland water in other parts of Canada. Of these only the following principal lakes, with their respective areas, need be mentioned here: in Quebec, lake Mistassini (975 square miles); in Ontario, lake Nipigon (1,730 square miles); in Manitoba, lake Winnipeg (9,457 square miles), lake Winnipegosis (2,086 square miles) and lake Manitoba (1,817 square miles); in Saskatchewan, Reindeer lake (2,437 square miles); in Alberta, lake Athabaska (2,482 square miles). All these are within the boundaries of the provinces as at present constituted, and are exclusive of lakes situated in the Northwest Territories, as, for instance, the Great Bear lake (11,821 square miles) and the Great Slave lake (10,719 square miles) in the district of Mackenzie.

Table 4 gives a list of the principal lakes of Canada by provinces, with the area of each in square miles. The table corresponds with the delimitation of the provinces as altered by the Boundary Extension Acts, 1912 (2 Geo. V, cc. 32, 40 and 45).

Islands.—The northern and western coasts of Canada are skirted by clusters of islands. Those on the north are mostly within the Arctic circle. On the west, Vancouver and Queen Charlotte Islands are the largest and most important. On the east, besides the separate island colony of Newfoundland, there are Cape Breton Island, forming part of the province of Nova Scotia, Prince Edward Island, forming one of the nine provinces of Canada, the Magdalen Islands and the island of Anticosti. To the south of Newfoundland are the two small islands of St. Pierre and Miquelon belonging to France. In lake Huron is the island of Manitoulin and the so-called Thirty Thousand Islands of Georgian Bay. In the St. Lawrence river, just below lake Ontario, are the picturesque Thousand Islands.

GEOLOGY AND ECONOMIC MINERALS.

By R. W. Brock, M.A., LL.D., F.G.S., Dean, Faculty of Applied Science, University of British Columbia.

Geological Investigations.—The geological investigation of Canada may be said to have commenced in 1843 with the organization of the Geological Survey of Canada under Sir William Logan. The classical work of Logan and his little coterie of assistants, Murray, Hunt, Billings, and others, was summarized in the Geology of Canada, published in 1863, which deals with the southern portions of Ontario and Quebec. Since this was written, the work of the Geological Survey has gradually widened until at present it embraces the northern half of the continent of North America. Much of this work has been exploratory. The great field to be covered with a small force has prevented concentration of effort, and in no single district can it be claimed that the geological problems are completely solved. The natural difficulties of travel in the northland have rendered the progress of even reconnaissance work tedious, and a large part of Canada is still practically unexplored. Nevertheless sufficient has been done to make known its main geological features, to indicate roughly the territories that will be found to be mineral bearing, to presage the character of its mineral resources in the different geological provinces and to demonstrate that Canada is destined to become one of the great mining countries of the world.

A brief summary of the characteristics of the main natural divisions of the country will at least suggest the possibilities of great expansion in the mineral development of the country.

Appalachian Region.—The southeastern portion of Quebec, together with the Maritime provinces, forms the northeastern extension of the Appalachian Mountain system. The Appalachian region is characterized by rock formations, ranging from pre-Cambrian to Carboniferous, that are typically disturbed and thrown into a succession of folds. In Canada the Appalachian extension is found to possess many of the minerals which have placed some of the eastern States in the foremost rank of mineral and industrial districts of the world. Important deposits of coal, iron, and gold are mined in Nova Scotia. Of lesser but still considerable importance, are the gypsum, stone and building material industries; manganese, antimony, tripolite and barite are also mined, and some attention has been paid to copper. The principal minerals of New Brunswick are gypsum, iron, coal, stone for building purposes and grindstones, clays, antimony, manganese, mineral water and oil-bearing shales. Natural gas is also an important product. The chief asbestos mines of the world are situated in southeastern Quebec, and there are important deposits of chrome iron ore, copper and pyrite. Iron ores and gold also occur.

Lowlands of the St. Lawrence Valley.—The southern portion of Ontario and the valley of the St. Lawrence are very similar geologically to the state of New York, and consist mainly of flat-lying Palæozoic rocks. The mineral products are the same, viz., clay, cement and other building materials, petroleum, natural gas, salt, gypsum and other non-metallic minerals.

Laurentian Plateau.—North of the valley of the St. Lawrence, from Newfoundland to beyond the lake of the Woods, and enclosing Hudson bay like a huge V, is an area of pre-Cambrian rocks, estimated to cover 2,000,000 square miles, or over one-half of Canada. Over the greater portion reconnaissance surveys only have been made, and the southern fringe of it alone may be said to be known, and of this fringe only a portion has been prospected. These rocks of the pre-Cambrian are remarkable for the variety of useful and valuable minerals they contain. Iron, copper, nickel, cobalt, silver, gold, platinum, lead, zinc, arsenic, pyrite, mica, apatite, graphite, feldspar, quartz, corundum, talc, actinolite, the rare earths, ornamental stones and gems, building materials, etc., are all found, and are, or have been profitably mined. Most of the other minerals, both common and rare, that are used in the arts have been found. Diamonds have not been located, but from their discovery in glacial drift from this area it is altogether probable that they occur.

A tongue of these pre-Cambrian rocks extends into New York state, which supports some large and varied mineral industries. Another extension crosses over from Canada into Michigan, Wisconsin, and Minnesota. In it are located the Michigan copper mines and the

great Lake Superior iron ranges. Along the southern edge of the pre-Cambrian in Canada, the only portion that has yet received any prospecting, there are already known copper and gold deposits in Saskatchewan and Manitoba, the gold ranges of the lake of the Woods, the silver of Thunder bay, a succession of iron ranges extending from Minnesota for hundreds of miles to Quebec, copper rocks of Michipicoten and Bruce mines, the Sudbury copper-nickel deposits (probably the largest high grade ore bodies in the world), the Montreal river and Cobalt silver areas, the world-famous Porcupine and other gold deposits, the corundum deposits of eastern Ontario, the magnetites of eastern Ontario and Quebec and their large apatite-mica deposits. In the far north about Coronation gulf, are rocks that will warrant prospecting, since they bear native copper very similar to the great Michigan occurrences.

Interior Plain.—The greater portions of Manitoba and Saskatchewan, that lie outside of the pre-Cambrian, and the province of Alberta, are pre-eminently agricultural; but in addition to furnishing an important market for the product of the mines they will have a large output of non-metallic minerals. The Interior plain is underlain for the most part by sedimentary rocks, chiefly of Cretaceous age, containing coal, building stones, clays, some of them high grade, and cement materials. Natural gas over wide areas and under great pressure has been tapped, and there is every indication of a large oil field in the northern portion, at least, of Alberta, and some oil has been encountered in the southwest. The lower sandstones of the Cretaceous along the Athabaska river, where they come to the surface, are for miles saturated with bitumen. These tar sands will probably average 12 per cent in maltha or asphaltum. Recent prospecting has discovered oil at Pouce Coupé on the Peace river, and at Fort Norman, on the Mackenzie river, near the Arctic circle. At other points in the Devonian rocks of the Mackenzie basin oil indications occur. The lignites of the eastern plains are useful for local purposes, and highly bituminized coals are found as the mountains are approached. Vast areas are underlain by lignite beds in Saskatchewan and Alberta, and the reserves of bituminous coal in Alberta are enormous. Gold is found in a number of the rivers coming from the mountains. Clay ironstone occurs in many parts of the northwest, and will in time be utilized. Salt and gypsum also occur.

Cordilleran Belt.—The Cordilleran belt in South America, in Mexico, and in the Western States, is recognized as one of the greatest mining regions of the world, noted principally for its wealth in gold, silver, copper and lead. The Cordilleras stand unparalleled in the world for the continuity, extent and variety of their mineral resources. In Canada and in Alaska this belt maintains its reputation, although in both, for the greater part, it is unprospected. In Canada the belt has a length of 1,300 miles and a width of 400 miles. It is pre-eminently a great mining region. Its rocks range from the oldest formations to the youngest; vulcanism and mountain building processes have repeatedly been active.

While a number of mining camps have been developed near the International boundary line (Sullivan, Slocan, Rossland, Boundary, Copper Mt.) and along the Pacific coast (Britannia, Surf Inlet, Anyox, Stewart), and while some of the main streams have been prospected for placer gold, the greater part of the Cordilleran belt in Canada is as yet untouched. Probably not one-fifth can be said to have been prospected at all, not one-twentieth prospected in detail, and not one area however small, completely tested. The chief products of the lode mines of the Cordilleran belt in Canada are copper, gold, silver, lead and zinc. Yukon is noted for its production of placer gold and is now attracting attention with rich silver ores. In addition to these minerals there are, in this portion of the country, enormous resources of coal of excellent quality, varying from lignite to anthracite, and conveniently distributed. Only the coal areas of the southern part of the province and a few small areas on the Telkwa, Skeena and Nass rivers and on the Yukon have as yet been examined.

Great unprospected areas are known to contain, in places, coal formations, and will no doubt when explored add greatly to the present known reserves. The coal production is not large as compared with the supply; but a large increase in production may be expected in the near future, as these are the best steaming and coking coals in the west.

Upon the knowledge already gleaned concerning the economic deposits of the Dominion by geological exploration, by prospecting and by actual mining, it is safe to predict that the mineral industry will become a very great and valuable one. Its development will render essential a close study of the geology of the country. The geological field in Canada is as rich and inviting as the mining. Perhaps half the rock history of the world is written in the pre-Cambrian, and it is of this portion that most remains to be deciphered. Since the greatest spread of these old rocks occurs in Canada, much of this work will fall to Canadian geologists, and the careful solution of the problems presented will be as valuable to science as to the mining industry.

GEOLOGY IN RELATION TO AGRICULTURE IN CANADA.

By Wyatt Malcolm, Department of Mines, Ottawa.

The agricultural possibilities of any country are dependent upon the character of the soil and on the physiographic features. Both of these are closely related to the geology and geological history of the country.

Soils.—Soil, strictly speaking, consists of but a thin surface layer of loose material containing humus, derived from the decomposition of organic matter and other compounds suitable for plant growth. The great proportion of both the soil and the subsoil consists of mineral matter. From the mineral constituents are derived potash and phosphoric acid, two of the chief compounds essential to the growth of vegetation. The mineral constituents are derived from

rocks that through various processes have been decomposed into incoherent particles. Soils may be wholly residual, that is, they may consist of material derived from the decay of immediately underlying rocks; or they may consist of transported material or of a mixture of residual and transported material.

The level, hilly or mountainous character of the country is dependent on the nature of the rocks and on the processes of uplift, folding and erosion to which they have been subjected. Sedimentary rocks like sandstones and shales yield readily to the action of such destructive agents as variations of temperature, frost, rain, wind, running water and ice, and of chemical processes such as oxidation, hydration and carbonation. The harder rocks, on the other hand, such as quartzites, slates and granites, are more resistant; mountains composed of these are therefore more slowly subdued than are those composed of sandstones and shales.

Agricultural Regions.—The portion of Canada, the climatic conditions of which are favourable to agriculture, may be divided into five great regions:

1. The Laurentian plateau, consisting of the vast upland surrounding Hudson bay and underlain chiefly by igneous rocks, such as granite, together with a less amount of hardened sediments.

2. The Appalachian region, occupying the Maritime Provinces and eastern Quebec and underlain by folded sediments and igneous rocks.

3. The St. Lawrence lowlands of southern Quebec and southern Ontario, underlain by nearly horizontal sediments.

4. The Plain region of Manitoba, Saskatchewan and Alberta, underlain by flat-lying sediments.

5. The Cordilleran region, the mountainous region extending from the Rocky mountains to the Pacific coast and underlain by folded sediments and igneous rocks.

These five regions have all been exposed to weathering for a long time. The Laurentian plateau is the oldest land area of any great extent in Canada.

During the long ages that this Laurentian continent has been exposed, the area to the southeast, south and west has been submerged for long periods beneath the sea, and great thicknesses of sandstones, shales, and limestones have been laid down. These sediments have been elevated subsequently above sea level, certain sections such as southwestern Quebec, southern Ontario and the plains of Manitoba, Saskatchewan and Alberta rising so gently as to produce little disturbance of the rock strata; while in eastern Quebec, New Brunswick, Nova Scotia and British Columbia the strata have been folded and crushed into mountain ranges and intruded by igneous rocks.

The soils derived from these rocks by long subjection to decomposing agencies were greatly disturbed in recent times by glaciation. Nearly the whole of Canada was covered by ice, which in the southern

part of the country had a general southerly movement. The result of the glaciation was that great stretches of country were denuded of soil, and other areas received accessions of a great quantity of transported material. Towards the close of the glacial period the outlets of many depressions were closed by lobes of the retreating glaciers and became filled with water. These lakes formed areas for the deposition of fine sediments, such as clay and silt, and on the final melting of the glaciers large stretches of level fertile land remained.

Laurentian Plateau.—The most extensive physiographic unit of Canada is the subdued Laurentian plateau. This is a gently sloping plateau of rather even surface, comparatively low and seldom rising 2,000 feet above the sea. The hills breaking the even surface rise but a few hundred feet at most above the general level.

It is a great U-shaped area surrounding Hudson bay and extends from the Atlantic ocean, on the Labrador coast, west to a line running northwest through lake Winnipeg, lake Athabaska, Great Slave lake and Great Bear lake. It extends south to lake Huron and lake Superior, and occupies nearly all the provinces of Ontario and Quebec, except the area southwest of a line running from Kingston to Georgian bay, that part of eastern Ontario forming the angle between the Ottawa and St. Lawrence rivers, and that part of Quebec south of St. Lawrence river.

This plateau is underlain by hardened sediments and igneous rocks. The latter are much more widespread than the former, and granitic types predominate. The rocks of this region are among the oldest rocks of which geologists have any knowledge. They are very resistant, and although they have been exposed to weathering since very early in the earth's history the inequalities in the surface features have not been wholly reduced. These inequalities have been augmented by glacial action. A further effect of glaciation was the denuding of much of this region of its soil. Generally speaking, therefore, the physiographic and soil conditions are not favourable to agricultural pursuits. Over a great part of the area, however, sufficient soil has been retained to support a forest growth, although insufficient for agriculture, and it is to be regretted that large stretches of such land have been depleted of their forests and have become dreary, barren wastes.

Within the plateau there are valleys where areas of softer rock have afforded a greater abundance of soil that has not been removed by glaciation, and beautiful cultivated fields lend a pleasing contrast to the surrounding forest. In places the sediments deposited in the basins of glacial lakes have reduced the inequalities of the surface and produced large level areas of arable land. Interesting examples of these are furnished by the Clay Belt of northern Ontario and Quebec, traversed by the Grand Trunk Pacific railway, and by the flat section of country along the main line of the Canadian Pacific railway a few miles north of Sudbury.

Appalachian Region.—The Appalachian region occupies the hilly part of southeastern Quebec and the Maritime Provinces. Here during remote geological ages the sedimentary beds of limestone, sandstone and shale that had been deposited beneath the sea were folded into mountain ranges, and were much altered and hardened and intruded by igneous rocks. During long succeeding ages these mountains have been subdued, and little is left that may be regarded as mountains except the Notre Dame range of Quebec with a general elevation of 1,000 to 2,000 feet and with peaks rising above 3,500 feet, the broken hilly country of the northwestern part of New Brunswick, a section of this province bordering the bay of Fundy, and a central ridge in Nova Soctia.

In the ordinary processes of erosion much of the loosened material resulting from rock decay was carried seaward, and in recent times glaciation denuded a great deal of the more elevated sections of country, leaving barely enough soil to support a forest growth.

In some places sediments have been deposited subsequently to the great folding processes of earlier ages; they are unaltered, easily attacked by weathering agencies and are overlain by an ample depth of soil. The soils of Prince Edward Island, the Annapolis-Cornwallis valley and other sections are derived from these sandstones and shales of later deposition, the shales producing the clayey constituents and the sandstones yielding the sand that renders the soil porous and tillable. Calcareous slates have in places, such as in Carleton and York co unties, New Brunswick, broken down into fertile soils. In eastern Quebec sufficient soil has been retained in the valleys to render the land arable.

The great fertility of the reclaimed marshes of Nova Scotia and New Brunswick is due to the fine silt deposited by the tides by which they were formerly submerged.

St. Lawrence Lowlands.—The St. Lawrence lowlands consist of the generally level, arable land south of the Laurentian plateau. This lies on both sides of the St. Lawrence above Quebec, reaching south to the international boundary, occupies the eastern part of Ontario, east of a line running southward from a point about 50 miles west of Ottawa, and forms that portion of Ontario lying southwest of a line extending from Kingston to Georgian bay.

These lowlands are among the most fertile of Canada's agricultural sections. They are underlain by flat-lying shales and limestones which yield readily to weathering. The physiographic features are favourable, and the residual material derived from the decomposition of limestones and shales results in a fertile, calcareous, clayey soil. The loose surface deposits are of great depth, in places exceeding 200 feet.

The lowlands were overridden by the great glacier. This glaciation, however, had apparently slight denuding effect on this part of the country, but served to mix the loose materials resulting from the weathering of the shales and limestones, and contributed the potash-bearing ingredients transported from the granitic areas of the Laurentian plateau.

In some sections, as in the vicinity of the Great Lakes, sedimentation took place in large lakes produced by the blocking o[c] the outlets of the present lake basins by lobes of the retreating glacier. Recent sedimentation took place also over southwestern Quebec and eastern Ontario during submergence beneath the sea about the close of the glacial period.

Plain Region.—The plains of Manitoba, Saskatchewan and Alberta are underlain by nearly flat-lying shales and sandstones. These have weathered down into the clays and clay loams that have made the plains one of the great wheat-producing districts of the world. This part of Canada was also subjected to glaciation, but the great proportion of the surface deposits is derived from the underlying rocks.

Some large stretches of the Plains region were submerged by glacial lakes in which fine silts and clays carried down from the surrounding land and introduced by glacial streams were deposited. Such is the very fertile Red River valley. This is a part of the bed of a great lake that extended from the Laurentian plateau west to the Manitoba escarpment; it reached southward into the United States and northward 100 miles beyond lake Winnipeg.

The great fertility of the prairie provinces is due in part to the mineral constituents of the soil and in part to the great accumulation of nitrogenous organic matter, the remains of ages of vegetable growth.

Cordilleran Region.—The Cordilleran region, extending from the Rocky mountains to the Pacific ocean, is underlain by igneous rocks of various kinds and by sediments that have been folded into mountain ranges and much altered. The whole region remains mountainous, though the interior section is reduced to an elevated plateau. Agricultural pursuits are therefore limited to the valleys. In these there are numerous terraces composed of silt carried down by streams issuing from former glaciers, the latter acting as eroding agents on the underlying rocks. These valley deposits are fertile and are well adapted to fruit culture. The soil of the lower Fraser is a heavier soil and consists chiefly of alluvium.

Thus is Canada's rich heritage in green forests and broad waving fields of grain the result of the geological processes of ages. Nature in her sterner moods produced those great upheavals, foldings and crushings of the earth's crust that resulted in the rugged and uneven stretches of country suited to the growth of forests; in her kindlier moments she slowly and gently and with little disturbance elevated above the sea the level or slightly undulating areas so well adapted to agriculture. Ages before man appeared upon the earth had the geological processes already determined what his pursuits should be and where they should be carried on.

THE FLORA OF CANADA.[1]

By M. O. Malte, Ph.D., Chief Botanist, National Herbarium, Department of Mines, Ottawa.

Introduction.

It is a well known fact that, at a geologically recent period, practically the whole of Canada from the Rocky mountains east was covered with glacial ice which, slowly advancing southward, reached as far as central Missouri in the United States. Whatever vegetation may have flourished in Canada before the glacial period was gradually forced to migrate southward as the ice advanced. During this retreat many species were no doubt wiped out of existence, but a certain number, belonging perhaps largely to types which now are found in the arctic regions, managed to survive. In fact, we must surmise that, during the glacial period, the vegetation immediately in front of the continental ice was arctic in character and that, when the glaciation reached its maximum, those parts of the United States which were immediately to the south of the ice had a flora similar to that now existing in the far north.

With the return of a warmer climate and the gradual recession of the continental ice, vegetation began to move back northward, with the Arctic types as a vanguard followed by more temperate and southern ones. Generally speaking, the Canadian flora, as it exists today, may therefore be said to be composed of immigrants that took possession of the country after the glacial period and established themselves in botanical provinces in accordance with their specific requirements. These botanical provinces, generally referred to as zones, will be briefly described in the following pages. For the boundaries of the various zones, see the accompanying map.

The Arctic Zone.—Botanically, the arctic zone is the region lying north of the tree line. In Canada it extends far to the south of the arctic circle, especially in the eastern parts of the Dominion. Its southern limit is, roughly, a line running from the estuary of Mackenzie river to the mouth of Churchill river on the west coast of Hudson bay. East of Hudson bay, the tree line, i.e., the southern boundary of the arctic zone, runs from about lat. 56° on Richmond gulf to the mouth of George river on the eastern shore of Ungava bay, and from there in a southeasterly direction along the cost of Labrador to Hamilton inlet. South of Hamilton inlet a narrow strip along the coast as far south as the strait of Belle Isle and extending a short distance to the west from there is also barren of real trees and therefore has an arctic aspect. This strip can hardly be included in the arctic zone proper, however, although a few arctic plants may be found there; the lack of trees and the barren appearance in general are caused by the arctic current which flows from the north along the coast and through the strait of Belle Isle.

[1]This article is a revised and popularized edition of a paper, entitled "Flora of Canada," by the late Mr. J. M. Maccun, C.M.G., F.L.S., and the writer, published in Canada Year Book, 1915, and also as Museum Bulletin No. 26, Geological Survey, Department of Mines, Ottawa, 1917.

The vegetation in the arctic zone is, generally speaking, of a low-growing and even dwarfed type. As mentioned above, the arctic zone has no real trees. The woody plants, even when half a century old or more, reach a very inconspicuous height in comparison with their next of kin farther south and are often prostrate or even trailing along the ground. In the more northern parts of the arctic zone the most conspicuous woody plants are willows and dwarf birches. Farther south, on the tundra, i.e., the more or less boggy lowlands north of the tree line, the woody plants are chiefly represented by members of the blueberry family.

In respect to herbaceous vegetation, the arctic flora of Canada is very closely related to the so-called circumpolar flora in general. Not only are there many species in arctic Canada which occur all around the north pole, but in general characteristics the Canadian arctic plants are very similar to arctic plants elsewhere, and particularly to those growing in Greenland and arctic Europe.

A striking form of growth encountered in many species is the dense, compact, bunchy type, which especially is found well developed on rocky ground in the northern sections of the arctic zone. This form of growth, as is well known, is characteristic also of arid and semi-arid regions in hot climates, and at first sight it may seem strange that it should also be found in the arctic. The arctic zone, however, from a plant physiological point of view, is somewhat akin to arid regions farther south. In the latter regions the bunch growth is generally considered to be associated with a shortage of water supply in the ground, and so it may also be considered in the arctic, to some extent at least. For, even if the ground may apparently be well supplied with moisture, the plants relying upon the moisture are often unable to utilize it on account of the temperature in the ground being at times so low that the water-absorbing parts of the plants are incapable of functioning.

Compactness of growth is also displayed by a number of plants which, although not growing in defined bunches, form dense and often rather extended mats. On the other hand, however, there are quite a number of species which grow neither in bunches nor in mats; these are common especially on the tundra.

Practically all arctic plants are perennials. Owing to the shortness of the season they are often caught by early frost before they have ripened their fruit and when still developing blossoms. Indeed, many species enter the winter regularly in this condition and hibernate with flower and leaf buds in an advanced stage of development. When the returning sun again wakes them up to renewed activity, they are therefore ready to spring into blossom over-night, as it were, and to present a surprisingly rapid development of vegetative as well as of floral organs.

The Sub-arctic Forest Zone.—The sub-arctic or so-called coniferous forest extends, in the east, from the arctic zone southward to a line running approximately from Anticosti to the south end of lake Winnipeg. This line is practically identical with the northern

limits of the white and the red pine. West of lake Winnipeg the sub-arctic forest is bounded to the south and west by the prairies and the foothills of the Rocky mountains, respectively. The Gaspé peninsula and sections of New Brunswick may also be included in the sub-arctic forest zone.

The sub-arctic forest, as the name indicates, is decidedly boreal. The trees do not reach any imposing height and the number of species which make up the forest is small in comparison with the number occurring in the hardwood forest zone to the south. The sub-arctic forest is largely coniferous in character, the black and white spruce being the dominating trees. Of the other coniferous trees the Banksian pine is the most important species. It reaches perfection in the western part of the zone and constitutes the chief source of supply of lumber for the northern prairie region. The other trees characteristic of the zone in general are aspen and balsam poplar, white birch, larch, and balsam fir. Between the gulf of St. Lawrence and lake Winnipeg, white cedar, white elm, and ash are occasionally met with, but these trees can not be considered to belong to the sub-arctic forest proper.

Perhaps the most striking characteristic of the sub-arctic forest is the abundance of berry shrubs; as examples may be mentioned gooseberries, currants, blueberries, raspberries, yellow-berries, and high-b ısh cranberries. Another striking feature in the complexion of the sub-arctic forest is the remarkable uniformity, in general character as well as in species, exhibited throughout the zone. This lack of variety is especially striking in the vegetation of the bogs, which are very numerous throughout the zone, the species encountered in the bogs of any one part of the zone being characteristic of practically the whole sub-arctic forest.

On the whole, the herbaceous flora of the sub-arctic forest is remarkably uniform throughout, and hardly a species is found that does not occur either in the arctic zone or in the hardwood forest zone to the south. A noteworthy exception to this rule is a small water lily, in fact the smallest of the water lilies, which is found in the sub-arctic forest zone only.

The sub-arctic forest zone is as yet almost undisturbed by settlers except in some sections of the eastern provinces, for instance in parts of the so-called clay belts of northern Quebec and Ontario. It forms a vast reserve of national wealth and may in the future, subject to judicious management, furnish the chief supply of wood for the pulp and paper industries in eastern North America.

The Hardwood Forest Zone.—The hardwood forest zone includes all eastern Canada south of the sub-arctic forest, with the exception of a small region in southern Ontario which extends between the shore of lake Erie and a line running approximately from Toronto to Windsor.

The hardwood forest zone is characterized chiefly by deciduous trees, the principal ones being basswood, sugar maple, red maple, black ash, white ash, white elm, yellow birch, red oak, burr oak, and

beech. Of the coniferous trees white pine, red pine, hemlock, and white cedar are the most important. The underbrush, although very variable and made up of a great number of species, is generally rather scanty and becomes conspicuous, as a component of the forest, only along the borders of the woods or where the woods are open. Among the most typical shrubs may be mentioned service berry, moosewood, purple flowering raspberry, sumach, poison ivy, and arrow-woods.

As the rainfall is abundant throughout the hardwood forest zone, the herbaceous vegetation is rich, in species as well as in individuals, everywhere where light and soil conditions are favourable. In the woods proper it is rather insignificant after the foliage of the trees is fully developed. In the spring, however, it is very luxuriant and, especially where the soil is rich and deep, there is a magnificent display of beautifully coloured and showy flowers, for instance trillium, bellwort, dog's-tooth violet, showy orchis, jack-in-the-pulpit, spring beauty, violets (blue, yellow and white forms), hepatica, dutchman's breeches, squirrel corn, bloodroot, pepper-root, barren strawberry, flowering wintergreen, blue phlox, etc. Others, less conspicuous but characteristic of the hardwood forest's spring flora, are species of sedges, wild ginger, blue cohosh, mitrewort, star flower, showy lady's slipper, etc.

During the summer the herbaceous vegetation is chiefly confined to the borders of the woods, clearings, and other places where the growth is not suppressed or kept back on account of too much shade. Characteristic of the bogs are, among others, various species of orchids and the pitcher-plant.

The autumn flowers are chiefly members of the composite family, with asters, golden rods, and joe-pye in greatest profusion.

Very characteristic of the hardwood forest zone is the autumnal colouring of the leaves of trees, shrubs, and herbaceous plants. This autumnal colouring lasts a comparatively long time, from about the first week of September to the second week in October, dependent on the dryness of the season. During that period a splendid display of colours is exhibited, especially in open, mixed woods where the underbrush is well developed. Shades of yellow, golden bronze, red and scarlet are mixed in a gorgeous symphony of colours, generally modulated most marvellously by the sombre, deep, dark or bluish green of the conifers which are dotted among the deciduous trees. No such wealth of autumnal colour is met with in any of the other zones.

The Carolinian Zone.—This zone is confined to a small tract of land in southern Ontario, bounded to the south by lake Erie and to the north by a line running approximately from the northern shore of lake Ontario to Windsor. Its flora is most typically developed on the Niagara peninsula and on the shore of lake Erie. In general physiognomy it is rather similar to the hardwood forest flora just described, but it differs greatly as far as characteristic species, and even genera, are concerned. It is decidedly southern as to species, and exhibits a large number of plants, woody as well as herbaceous, which occur nowhere else in Canada.

The most characteristic trees are the hickories (six species), the oaks (ten species), the black walnut, the chestnut, and the sycamore. Less abundant and more local in their distribution are the cucumber tree, the tulip tree, the flowering dogwood, which all have beautiful and very conspicuous flowers, the papaw, the red mulberry, the American crabapple, the sour gum, the sassafrass, and others.

The herbaceous vegetation is very rich and at least a hundred species which occur nowhere else in Canada are found in the zone. A few of the most conspicuous ones may be mentioned, viz: yellow nelumbo or lotus flower, may apple, wild lupine, tick trefoil, flowering spurge, swamp rose mallow, wild pansy, prickly pear, poke milkweed, wild potato vine, downy phlox, water-leaf, bee balm, fox-glove, tall bell flower, great lobelia, ironweed, dense button snakeroot, prairie dock, cup plant, sunflowers, tall coreopsis, Indian plantain, showy lady's slipper, etc.

Golden seal and ginseng were at one time abundant but are now practically extinct. Indeed a similar fate is also threatening many of the other species characteristic of the zone, the reason generally being clearing of the land for agricultural purposes.

The Prairie.—Under the general term prairie is understood the vast grass-covered area of the provinces of Manitoba, Saskatchewan, and Alberta. It is bounded to the east and north by the sub-arctic forest and to the west by the foothills of the Rocky mountains.

The prairie, which begins a few miles east of Winnipeg, has been subdivided into three zones, known as the first, second and third "prairie steppe." These zones are rather indefinite, botanically speaking, and they have one thing in common as far as the vegetation is concerned. The luxuriance and general appearance of their flora are to a conspicuous degree dependent on the rain and snowfall. In case of the spring vegetation, the rainfall during the previous year and the snowfall during the preceding winter are dominant factors, so much so that, in the event of lack of sufficient precipitation, the spring flora may in certain years be either very poorly represented or even almost entirely absent. The summer and fall vegetation are to an equal extent dependent on the present season's precipitation and thus it may happen that a district which one year displays a luxuriant growth, rich in species and individuals, may a following year appear almost barren of flowering plants. Lack of precipitation is also largely responsible for the fact that in some seasons the grass vegetation, so characteristic to the prairie, may remain practically at a standstill without heads or seeds being formed.

First Prairie Steppe.—This, as defined by the late Professor John Macoun, includes "the low plain of Manitoba, bounded by a line of elevated country, which commences at the international boundary at a point some distance west of Emerson, and extends northwestwardly under the names of Pembina, Riding, Duck, Porcupine and Pas mountains."

The southeastern part of the area so defined differs from the true prairie in that it is characterized by many woodland plants which have

their home east of the Great Lakes but which occur rarely, if at all, between lake Huron and the Manitoba border. Among these plants may be mentioned nettle tree, basswood, wild plum, hawthorn, Virginia creeper, moonseed, bloodroot, columbine, hog peanut, tick trefoil, prickly cucumber, species of gentian, lousewort, Indian paint-brush, ox-eye, cone-flower, etc.

The prairie proper of the first prairie steppe is confined chiefly to what is known as the Red River valley, i.e., the low, flat plains south and west of Winnipeg. In this region trees are met with only in narrow fringes along the rivers, oak, elm, poplars, and Manitoba maple being the most abundant. Away from the borders of streams the prairie is treeless. It is covered with an abundance of herbaceous plants, the most widely represented families being the composite family (asters, golden rods, etc.), the rose family, the pea family, the grass family, and the sedge family, but the species representing them can hardly be said to be characteristic of the zone, as practically all of them are found in suitable localities farther west.

Second Prairie Steppe.—This extends westward to a line running approximately from the international boundary at longitude 103° 30′ in a northwesterly direction to Battleford.

The flora is rather diversified and several very different plant associations are met with. In the north, where the prairie and the sub-arctic forest meet, the flora is composed of species characteristic of both zones, as is also the flora of the northern parts of the third prairie steppe. In the southwestern part of the second prairie steppe, i.e., the country southwest of Moose mountain, in Saskatchewan, the vegetation is in many respects similar to that of the drier sections of the third prairie steppe. The grass is very short and the vegetation in general of a type adapted to regions with a scant precipitation. In places, large sandy tracts exist which are covered with a profusion of cactus, and in others there is no vegetation except that peculiar to arid land. Extending from the hills forming the boundary between the first and second prairie steppes there is much broken or park-like country. This is also met with in the Qu'Appelle River valley and in other parts of the zone. Poplar and oaks are the chief trees of the bluffs and the herbaceous vegetation, as may be expected, is made up of a mixture of prairie and woodland forms.

The major part of the second prairie steppe is true prairie, with no trees except in the river valleys. Shrubs occur, generally in low thickets or copses, and very frequently in small clumps composed of a single species. On the exposed prairie, where their growth always is stunted, occur: snowberry, silver berry, buffalo berry, saskatoon, roses, and others. In damp situations meadow sweet is met with, and in wet places, such as the borders of ponds and marshes, willows are abundant. The herbaceous vegetation varies somewhat with soil conditions but, taking the second prairie steppe as a whole, the numerous members of the pea family, which are met with everywhere, are perhaps the most characteristic flowering plants.

Third Prairie Steppe.—This includes the rest of the prairie up to the foothills of the Rocky mountains. In its northern parts, i.e. north of lat. 52°, the flora is very similar to that of the second prairie steppe, but in the southern parts it is very different.

Except on Wood mountain and Cypress hills no trees occur except along the borders of streams in the valleys, and the ponds, marshes, and lakes are not even fringed with shrubs. The rivers and creeks flow in deep, narrow valleys and the country in general is broken by coulees and low hills. The precipitation is scant and, as a result, the vegetation has a poverty-stricken appearance and is often almost desert-like in character. In fact, a large number of flowering plants occur which approach typical desert plants in being protected, in some way or other, against a too rapid loss of the moisture which they manage to absorb from the soil. Among such plants could be mentioned many species characterized by a dense grayish or white covering of thick, woolly hairs, and others which have no leaves.

Large districts, especially in the Coteau de Missouri belt, are characterized by the absence of drainage valleys, the result being that the water in the lakes and ponds is generally saline and that numerous alkali flats occur. The vegetation in such situations is sparse and largely made up of plants especially fitted for soils rich in salt. Indeed, in these inland ponds and marshes, a number of plants thrive which normally occur in profusion on the shores of the Atlantic ocean.

The Rocky Mountains.—A great number of prairie species reach a considerable altitude in the foothills of the Rocky mountains. On the other hand, a number of sub-alpine forms descend practically to the prairie, the result being that in the foothills, where the two types of vegetation intermingle, the flora is very rich in species. As the foothills and the lower slopes are ascended, the prairie forms gradually disappear and are replaced by mountain species. The vegetation in general becomes more luxuriant in appearance, the herbaceous plants grow taller, shrubs become an important feature in the flora, and finally real forests are reached.

In the well developed forests on the slopes the trees are largely coniferous, the principal ones being lodge-pole pine, whitebark pine, white spruce, balsam fir and, highest up, larch. The shrubs are few in number, except in open and springy places, where bewildering thickets composed of many species of willows are found. The herbaceous vegetation is also rather scant, except along the edges, in open spaces, and along brooks and rivulets. In the dense forest, members of the blue-berry and winter-green families are conspicuous.

On the grassy slopes above the tree line the herbaceous vegetation again becomes very rich in species, exhibiting the richness and brilliancy of colour in the flowers so characteristic of alpine vegetation in general, until, just below the snow line, it takes on an appearance suggestive of arctic vegetation. In fact, many species occur on the higher levels in the Rockies which also have their homes in the

arctic regions, a fact which may be satisfactorily explained, in the words of Darwin, as a result of conditions caused by the glacial period, as follows: "As the warmth returned (after the glaciation had reached its height) the arctic forms would retreat northward, closely followed up in their retreat by the productions of the more temperate regions. And as the snow melted from the bases of mountains, the arctic forms would seize on the cleared and thawed ground, always ascending higher and higher, as the warmth increased, whilst their brethren were pursuing their northern journey. Hence, when the warmth had fully returned the same arctic species, which had lately lived in a body together in the lowlands . . . . . would be left isolated on distant mountain summits (having been exterminated on all lesser heights) and in the arctic regions . . . . . ."

The Selkirk Mountains.—While the Rockies may be looked upon as a chain of individual mountains, the Selkirk range has more the character of a high-level plateau from which the peaks rise. As a result there are real alpine meadows in the Selkirks whereas, in the Rockies, similar plant formations are generally met with on steep slopes. The differences in the vegetation of the Rockies and the Selkirks above the tree line are conspicuous and are due largely to differences in the amount of precipitation, the Selkirks being favoured with a much more abundant moisture supply. For this reason the alpine meadow plant associations of the Selkirks extend almost to the snow line and, for the same reason, a number of high-alpine plants, which in the Rockies are characteristic of the bare peaks above the grassy slopes, are not met with at all in the Selkirks.

The Selkirk forest differs from that of the Rocky mountains with regard to composition, as far as the trees are concerned, the principal species being cedar, Douglas fir, hemlock, and Engelmann's spruce. The undergrowth is, on the mountains proper, quite similar to that of the Rocky mountain forest and, although more luxuriant, is not represented by many species.

In the lower valleys, however, and on lower levels where the forest is more open in character, the shrubby as well as the herbaceous undergrowth is very different. Not only is it luxuriantly developed, but the species of which it is composed are of a different type. The Rocky mountain flora is disappearing, its place being taken to such an extent by Pacific coast species that the casual observer will find it rather difficult to detect any conspicuous difference between the flora of the Selkirk valleys and that of the coniferous forest of the Pacific coast.

The Coast Mountains.—Although having a large number of plant species in common with the Selkirks, the Coast range must be considered a distinct botanical zone, as many species occur there which are confined to the Pacific coast. The coast range is also the home of several species which are very local in their occurrence and which, as far as is known at present, do not grow anywhere else.

Owing to the long growing season, the high average temperature, and the abundance of the precipitation, the vegetation in the valleys and lowlands of the Coast range is almost sub-tropical in appearance. The trees, especially the cedar, the Douglas fir, and the spruce, reach gigantic dimensions, and the forest, even when very dense, possesses a luxuriant undergrowth. In old, untouched forests, fallen trunks, shrubs, and herbs form an almost impenetrable tangle. This is especially the case where salal and devil's club are luxuriantly developed.

Of trees characteristic of the valleys and the lowlands may be mentioned cedar, Douglas fir, Sitka spruce, hemlock, white fir, red alder, crabapple, broad-leaved maple, cascara, and of shrubs, several species of willows, Oregon grape, species of currants and gooseberries, thimbleberry, salmonberry, roses, juneberry or saskatoon, devil's club, salal, blueberries, and red-fruited elder.

The herbaceous vegetation is very rich. Many species of beautiful ferns are abundant, and the grass vegetation, especially along the coast, is luxuriantly developed. Of other herbaceous plants may be mentioned skunk cabbage, trillium, wild lily-of-the-valley, yellow pond lily, fringe-cup, false mitrewort, alum root, bleeding heart, goat's beard, twinflower, aster, etc.

The major part of Vancouver island has a typical Coast Range flora. The southeastern section, however, has a vegetation of a quite different type. There, the growth is influenced by the comparatively scant precipitation, with little rain between spring and fall. As a result the spring vegetation is much more conspicuous than the summer and fall vegetation, especially on open and rocky land. In addition, the section is characterized by a number of species which are more or less of a Californian type and which occur nowhere else in Canada. Among the plants in the southeastern section of Vancouver island may be mentioned an exceedingly large number of grasses among which the most conspicuous ones are several species of brome grasses, camas, wild hyacinth, blue-eyed grass, spring-beauty, lupins, bird-foot clover, tall vetch, marsh hollyhock, godetia, arbutus or madrona, gilia, grove-lover, paint-brush, etc.

Dry Belts of British Columbia.—A few words may finally be said about the most important dry belts of British Columbia, including the Okanagan and the Kamloops districts. These regions, owing to the scant precipitation and to the nature of the soil, have a flora which strangely contrasts with that of the other parts of the British Columbia mainland.

In the dry belts two floristic subdivisions may be recognized which, however, run more or less into each other and for this reason will not be dealt with separately. One subdivision is characterized by so-called bunch grasses, of which "wild rye" is the most conspicuous species, and is more or less destitute of forest-forming trees. The other floristic subdivision of the dry belts is more densely wooded, the characteristic tree of the forest being the yellow pine. On the whole, the dry belts may be said to be park-like in general character, with a rather desert-like ground vegetation.

FAUNAS OF CANADA.

By P. A. Taverner, Department of Mines, Ottawa.

Whether the fauna of the western hemisphere was derived from that of the eastern, or *vice versa*, as is contended by various authorities, there is a close relationship between them, and one of these contentions is certainly true. Geological evidence shows that in previous ages types now found in but one of the great continental circumpolar divisions were once common to both. Old and now submerged land connections between the continents have been postulated both from zoological and geological evidence, and a more or less complete continuity of land throughout the northern hemisphere, in former times, must be acknowledged before present American biotal conditions can be thoroughly understood. That this connection was in the far north and in what is now arctic or sub-arctic climate did not prohibit a continual interchange of warmth-loving species, for the presence of coal in very high latitudes points to milder if not tropical or subtropical conditions where now we find perpetual snow and ice. We must therefore conceive of a pre-glacial time when tree-ferns and other luxuriant coal-producing forests occupied extreme northern lands, and such animals as elephants, horses and other warmth-loving species could spread from one continent to the other.

This intercontinental connection must have been made and broken numbers of times by the recurrence of glacial periods which covered this country with ice to well south of the present Great Lakes and must at times have formed barriers to the passage of life across the far north more complete even than we find today. During these periods of alternate isolation and connection there was ample time and opportunity for wide divergence in development in the faunas of the separated land masses, the extinction of connecting links and the occurrence of many complexities to confuse the clear picture of the historical succession until today we find a nearly identical circumpolar fauna at the north progressively breaking up and differentiating into peculiar and special New and Old World forms as it proceeds south.

Having considered the history and consequent relation of North American life to that of the world in general, we can take up the details of its distribution on our continent. The general trend of geographical distribution in Canada is from southeast to northwest. Ocean currents have much to do with this. Our east coast is chilled by the cold arctic current coming directly down from the polar ice fields through Davis strait, and the west coast is warmed by the grateful temperature of the great final sweep of the Japan current. When we realize that the barren Labrador coast of the gulf of St. Lawrence is in almost the same latitude as southern British Columbia and is slightly south of the most southerly point of the British Isles, we can see what a great and fundamental influence these ocean currents have on the distribution of life upon our continent. Elevation is another factor that has a determining influence on climate and the distribution of animal life. It is well known that high mountains

even in the tropics present arctic conditions at their peaks. Less elevation has similar effect in proportion to its height and often a rise of a few hundred feet will produce conditions that otherwise would only occur at considerable distance to the north. Not only do hill and mountain ranges thus project long tongues of northern faunas into southern localities but on the retreat of the ice at the end of glacial epochs they formed northern oases for the retreating cold-loving forms as they withdrew from the gradually warming lowlands. We thus have true arctic "relicts" of an ancient order isolated on mountain tops far from their natural geographical habitats,—boreal islands in a sea of more southern life.

The general outline of zonal life distribution is well known. All are familiar with the fact that tropical life differs from temperate and from arctic. Close study, however, shows that besides these broad and obvious associations are minor ones. Various attempts have been made to map them out, and perhaps the most successful and generally accepted one for our purposes is that by Dr. C. Hart Merriam. This divides North America into three regions, a Boreal, Austral and a Tropical one, with the first two each divided into three life zones: the Arctic, Hudsonian and Canadian zones for the Boreal region and the Transition, and Upper and Lower Austral zones for the Austral Region. In Canada we have five of these zones represented—from the north: the Arctic, Hudsonian, Canadian, Transition and Upper Austral. These extend across the continent, roughly agreeing with latitude, but thrown out of regularity, as previously indicated, by local conditions and agreeing closely with the mid-summer isotherms or temperature belts.

The Arctic zone is the so-called "barren land" of the far north, treeless and almost shrubless, and extends south to include all the north shore of the continent as well as the islands above. The distinctive land mammals of this zone are the polar bear, the musk ox, Barren Land caribou, arctic fox, arctic hare and lemming. Amongst the characteristic birds are snow buntings, ptarmigan, longspurs, snowy owl and the gyrfalcons. This is the great nesting ground for many of our waders and more northern ducks and geese. There are few residents, as most forms migrate in winter.

The Hudsonian zone is the land of scrub forests, small stunted trees, mostly coniferous, and scattered dwarf willows and poplars. The southern boundary of this zone extends from the north shore of the gulf of St. Lawrence to near the mouth of James Bay, thence in a wavy curve to Great Slave lake where it drops south suddenly to a latitude about on line with the lower point of the Alaska Pan-handle, and thence to near the coast. It thus includes the southern Ungava peninsula, a narrow belt extending northwest from James bay, the Yukon, northern British Columbia and southern Alaska. It is penetrated from the north by the Arctic zone which persists on the mountains of the Yukon and from the south by the Canadian zone which follows up the valleys of the Mackenzie and Peace rivers. It is shut off from the sea on the Pacific side by the Alaska Pan-handle which has an intrusive Canadian

fauna. On the other hand, it works down the Rocky mountains in a narrow band and scattered isolated spots to across the United States boundary. This zone can be considered more as a transition between the Canadian and Arctic zones than a primary division itself. It contains species whose centres of abundance are on either hand and a few peculiar to it. Musk oxen, caribou and ptarmigan range into it in winter from the north, and it forms the extreme northern distribution of woodland caribou and moose. Its most characteristic birds are the rough-legged hawk, great-grey owl, northern shrike, pine grosbeak, white-winged cross-bill and fox sparrow.

The Canadian zone occupies the greater area of Canada and can be roughly defined as the heavy coniferous forest belt. It includes practically all the remainder of the Dominion except the inner shores of the Nova Scotia peninsula, southern Ontario and Quebec in a narrow strip from about Montreal to just below Georgian bay on lake Huron, the prairies, a small irregular fringe along the Pacific coast opposite Vancouver island and a few mountain valleys penetrating the southern boundary of British Columbia. Beyond our borders it extends irregularly south on the mountains and high land near both coasts, including the south shores of lake Superior, and penetrates the Hudsonian zone on the north along the valleys of the Mackenzie and Peace rivers and runs up most of the Alaska Pan-handle. This is the first land fit for systematic cultivation. The characteristic life is more numerous than in the preceding zones and includes the moose, woodland caribou, lynx, marten, porcupine, varying hare, white-throated sparrow, numerous warblers, olive-backed thrush, three-toed woodpeckers, pileated woodpecker, spruce grouse and Canada jay.

The Transition zone is agriculturally the most important Canadian faunal division. It lies just along the southern border, including most of both shores of the bay of Fundy, Quebec, below the gulf of St. Lawrence, a narrow belt following the north shores of lakes Ontario and Erie, all of the western prairies and intrusive valleys into the south of British Columbia and the shores of the strait of Georgia. The name Transition well describes this fauna. It contains comparatively few distinctive species, but is where many northern and southern forms meet. Except in the prairies it is the country of the hardwood forests where many of the temperate and hardier fruits, vegetables and cereals reach their highest perfection and is the northern limit of some of the tenderer ones. Its southern limit lies in the United States below, striking almost squarely across the continent on a line with the lower points of the Great Lakes, with excursions southward along the mountain ranges east and west and penetrated by extensions of the Upper Austral fauna along warm lowland valleys in the west. It forms the northern limit of range of the cotton-tail and jack-rabbits and the American elk, and is just touched upon by the varying hare from the north; the common mole of the south meets the Star-nosed and Brewer's mole of the north and the wild cat partially replaces the Canada lynx. Amongst birds, the wild turkey, bob-white, two cuckoos, towhee, wood thrush and yellow-throated vireo are at the northern

limit of their ranges, and the Baltimore oriole, bluebird, catbird and bobolink overlap the solitary vireo and Wilson's thrush.

The Upper Austral zone in Canada is small in area but important in production. It just crosses our borders in a narrow shore belt along lake Erie extending to the south side of lake Ontario and including the Niagara Peninsula. It forms the famous Ontario fruit belt and is comparatively strongly marked by quite a number of characteristic forms, especially amongst plants. It extends south as far as the northern borders of the Gulf States, variously dotted and cut into by intrusive branches of the neighbouring faunas from either side, especially in the broken country of the west.

There are not many peculiar mammals that are well known to the general public, and perhaps the opossum is the most distinctive. Among birds we have the yellow-breasted chat, mockingbird, Carolina wren, Carolina chickadee, orchard oriole, barn owl, a number of distinctive southern warblers and southern subspecific forms allied to more northern variations.

These make the latitudinal or thermal divisions of our faunal life. Outside of the species mentioned are numerous forms that extend over the whole area, but show in different zones variations recognizable to the expert but stopping short of specific distinction. A good example is the hairy woodpecker. This bird breeds over all the wooded parts of North America, but the birds from the Lower Austral zone are quite separable by the trained eye from those of the Upper Austral and Transition and these from the large northern form of the Hudsonian. This is but one case of many where a northern and a southern race exist in the same species and which we designate subspecies. Some of these geographical races are so slightly differentiated as to require an expert to separate them while others are marked and striking. The critical difference between a full species and a subspecies is the fact that the latter intergrade and blend into each other gradually. With species the break between is sudden, and intermediates do not occur.

With this zonal distribution and a variation of life groups depending basically upon temperature, we have another system of distribution east and west, depending largely upon physical conditions of habitat—the arrangement of land and water or mountain ranges forming barriers or highways of migration and leading certain forms in certain directions while barring them from others—and the comparative rainfall and humidity of climate. This has a primary direct influence upon the forms of life we are considering, as well as a secondary and indirect one through the plants and insects which give them food or shelter.

The principal divisions east and west are divided by the Rocky mountains, which successfully cut the Pacific coast off from close contact with eastern forms. This great backbone of the continent extends in a northwesterly direction and forms the political boundary between Alberta and British Columbia. An extension of this line until it strikes the centre of the main Alaska-Yukon boundary roughly approximates the dividing line of the east and west faunas, leaving a

triangular patch to the west including British Columbia, southern Yukon and southern Alaska as the western or mountain fauna, and cutting through three of the trans-continental zones, the Transition, Canadian and Hudsonian with fragments of the arctic on the higher elevations to the north.

The mountain district is characterized by an abundant rainfall, a high average humidity and a greatly diversified and rugged topography, forming a succession of mountain ranges with deep valleys between, paralleling the coast, facilitating intercommunication in this direction but obstructing it from east to west. These topographical conditions continue to the south well into Mexico and enforce migration routes and conditions and associations more or less isolated. The marked humidity of the climate, especially near the coast, also causes or encourages special physiological changes in numerous organisms tending as a rule to produce larger size and browner or richer colouration. These differences in physical conditions and the isolation formed by the barrier mountains have produced a great number of forms peculiar to the trans-mountain district. In fact, comparatively few species, either of birds or animals, extend across the mountains from the east unmodified, and the native population can be divided into three heads: subspecific variations of eastern forms, species confined to the area and forms of evident mountain origin but spreading from them a certain distance eastward. Typical amongst the first may be mentioned the moose and woodland caribou, the Oregon subspecies of the ruffed grouse, Harris' Rocky-mountain and Gairdner's woodpeckers, northwest flicker, dusky and streaked horned larks, many forms of the warblers and sparrows and others.

Of full species confined to this fauna are: Douglas squirrel, black-tailed deer, pika, yellow-bellied marmot, bushy-tailed wood rat, little striped skunk or spilogale, blue and Franklin's grouse, band-tailed pigeon, red-breasted and Williamson's sapsucker, Steller's jay, black and Vaux swift, black-chinned and rufous hummingbirds, Clark's nutcracker, northwestern crow, dipper, chestnut-backed chickadee, varied thrush and others. Of forms typical of the mountains but spreading a little way east are: hoary marmot, mule deer, grizzly bear, red-naped sapsucker, Lewis's woodpecker, red-shafted flicker, Hammond's and Wright's flycatcher, black headed grosbeak and many more.

The Eastern fauna is comparatively homogeneous across the continent in a diagonal direction from the Atlantic coast to Alaska, with but slight variation in physical aspect, except in the prairie region of the central west. It is a country of low, even topography with good rainfall and covered with a uniform forest of little variety except such as is due to latitude and zonal distribution, but into it project the upper limits of the Great Plains characterized by great dryness, near-desert conditions and almost an entire absence of trees. This penetrates the moist continental fauna as a semicircular extension of the Transition zone, its chord on the international boundary extending from the eastern Manitoban line to the mountains and north to Edmonton and Prince Albert.

The general tendency of this prairie fauna is towards small size and pale, bleached colouration. Such species as are characteristic of it are those like the prong-horn antelope, bison, coyote, gopher, prairie chicken, sage hen, burrowing owl, Leconte's sparrow, and lark bunting whose open country requirements debar them from wooded land. The remainder of its fauna is similar to that of the eastern country but generally subspecifically differentiated from it through the dryer climate and desert-like conditions. Some species that can be exampled under this division are western horned owl, Say's phœbe, desert horned lark, pale goldfinch, western clay-coloured sparrow, Dakota song sparrow, prairie marsh wren, etc.

The true Eastern fauna, though generally similar from the far northwest to the Atlantic coast, does show a slight tendency to variation north of these plains, but the influence is slight and in broad treatment can be disregarded. Many species extend unmodified throughout the area, or when modification occurs it can usually be attributed to either thermal differences or the influence of the closely allied neighbouring prairie forms it comes into contact with in migration or on its edges. In general, most of the subspecific forms mentioned as prairie or western are represented by type subspecies in this great eastern fauna, which is perhaps the typical fauna of Canada and which gives distinctive character to our biotal resources.

ECONOMIC GEOLOGY OF CANADA, 1920-1921.

By Wyatt Malcolm, Geological Survey, Ottawa.

The purpose of the writer in presenting this paper is to call attention to the most important reports and articles treating of the economic geology of Canada, published during 1920 and 1921. Brief notes are given on the contents of the most important reports. It is hoped also that this paper will serve to indicate where detailed information regarding the mineral resources of the country may be obtained, since the articles reviewed, although recently published, do not necessarily contain the best and most complete information on the subject. The numbers appearing in brackets after the names of writers refer to the publishers listed at the end.

Bauxite.—This is the mineral from which the metal aluminum is produced. As Canadian manufacturers are dependent on foreign sources of supply of this raw material and as geological conditions in parts of British Columbia appear favourable to its occurrence, the Munition Resources Commission of Canada authorized W. F. Ferrier to make a search for this mineral in the Interior plateau region during parts of the field seasons of 1917 and 1918. Although no discovery of bauxite was made the report on the work contains valuable geological and mineralogical information. It appears in the final report of the Munition Resources Commission.

Chromite.—The results of certain investigations made by the Munition Resources Commission of Canada appear in their final report. W. F. Ferrier reports on a deposit about 6 miles from

Ashcroft, B.C., where finely crystalline chromite is found in serpentine. J. C. Gwillim reports on the chromite situation in Quebec. A description is given by L. Reinecke (1) of the deposit discovered about 20 years ago on Chrome creek, a tributary of Scottie creek.

Clays and Shales.—Among the most important clays tested and reported on by J. Keele (1, 2, and 3) are the fire clays of Mesozoic age on Mattagami and Missinaibi rivers, northern Ontario and some residual clays from British Columbia. Residual clay from central British Columbia is reported as suitable when mixed with more plastic clay for the manufacture of firebrick, or for sewerpipe. The Mesozoic clay deposits of northern Ontario were examined in the field by J. Keele. Laboratory tests show that they are suitable for the manufacture of a wide range of products such as stoneware goods, sewer pipe and other vitrified products. Some of the clay is of very high grade and would be suitable in the crude state for retorts, crucibles or fire brick, and if washed could be used for the manufacture of electric or sanitary porcelain and floor and wall tiles. Mary E. Young (2) contributes the results of interesting investigations on the pottery clays of Canada.

Coal.—A description of the coal fields of the upper Highwood river, Alberta, is given by Bruce Rose (1). There are no working mines in the area, but the coal measures have been well prospected on Cat creek. Fourteen seams ranging from 4 feet to 38 feet in thickness are here exposed in a distance of about three quarters of a mile across the Kootenay measures. From these it should be practicable to mine coal with a carbon content of 70 per cent and an ash content of less than 15 per cent. The geology of the upper Elk River basin has been described by J. Marshall (1). Here also the Kootenay measures have been found to carry a number of thick seams of bituminous coal. The coal fields of the Crowsnest pass, British Columbia, where very thick seams of Kootenay coal have been mined for many years, are described in a paper by Robert Strachan (6).

In a paper by A. MacLean (6) information is given in concise form regarding the lignite seams of southeastern Saskatchewan, their thickness, areal extent, depth and estimated reserves. The question of the extent and character of the lower seams is also discussed by D. B. Dowling (1).

A short report by A. McVicar (1) contains information regarding a number of coal seams found in an unprospected area northwest of Brulé lake, Alberta; investigations into the stratigraphy of the Sydney coal basin, Nova Scotia, are presented by W. A. Bell (1); and G. A. Young (1) presents a consideration of the possibilities of the occurrence of a commercial seam of coal in Gloucester county, New Brunswick, and offers suggestions on the method of prospecting the area.

Copper.—A number of papers appeared during 1920 and 1921 descriptive of copper deposits of British Columbia and Manitoba. The copper produced in Ontario is derived from the nickel-copper deposits of Subdury and papers on these will be referred to under the heading "Nickel."

In northern Manitoba a body of copper ore at the Mandy mine was found sufficiently high grade to permit of long haulage by horse teams and by water to the railway and by rail to the smelter at Trail in southern British Columbia. Notes on the discovery and exploitation of this ore body are given by J. E. Spurr in the Engineering and Mining Journal and G. R. Bancroft in a bulletin of the Canadian Institute of Mining and Metallurgy. A description of the Flinflon mineral deposit, a large low grade copper deposit in the vicinity of the Mandy mine, is given by R. C. Wallace in the Canadian Mining Journal, 1921. The Geological Survey publishes the results of a careful study of the Sunloch ore bodies, Vancouver island, made by V. Dolmage. Valuable papers describing the geological features of a number of copper deposits have appeared in scientific periodicals. In Economic Geology are papers by V. Dolmage on the Marble Bay mine, Texada island, and by E. L. Bruce and George Hanson on the copper deposits of Manitoba. In the Transactions of the Canadian Mining Institute papers by E. E. Campbell on the Hidden Creek mine at Anyox and by J. J. O'Neill on native copper deposits of the Arctic appear.

Fluorspar.—This mineral is used as a flux in metallurgical processes and as a source of fluorine in the manufacture of hydrofluoric acid. The two sources of fluorspar in Canada are the Rock Candy mine near Grand Forks, southern British Columbia, and a number of mines in the vicinity of Madoc, Ontario. The Madoc deposits have been examined by M. E. Wilson (1), who gives a general description of their mode of occurrence, discusses the problem of their origin, and describes in detail the various properties.

Gold.—Several valuable reports on gold mining districts or prospective gold mining districts of Canada were published by government departments during 1920 and 1921. Among the most valuable of these are several reports on Ontario gold deposits. An important contribution to our knowledge of the geology and ore deposits of Kirkland lake, next to Porcupine the most productive gold mining district of Ontario, is made by A. G. Burrows (3) and P. E. Hopkins. The report is accompanied by a detailed map on a scale of 600 feet to one inch. The ore bodies consist of lodes or composite veins formed under strong compressive forces with the solutions following openings along fracture planes in an irregular manner and partly replacing porphyry or other country rock adjacent to the fracture planes. The lenses of quartz are sometimes several feet wide and contain visible gold with tellurides, pyrite, chalcopyrite and molybdenite. Some of the ore shows very little vein quartz, and specimens of altered red syenite have been found to contain grains of gold in the secondary minerals.

Other gold areas in Ontario that have been described are: Matachewan area by H. E. Cooke (1) and A. G. Burrows (3); West Shining Tree by P. E. Hopkins (3); Ben Nevis and Argonaut areas by C. W. Knight (3); Schreiber by T. L. Tanton (1); and Goudreau by A. G. Burrows (3).

Gold deposits occurring in rocks of Precambrian age in the vicinity of lake Demontigny, Timiskaming county, about 30 miles south of the National Transcontinental railway have been described by A. Mailhiot (4). The gold occurs in quartz veins in which tourmaline is sometimes found in abundance.

Northern Manitoba has in recent years attracted considerable attention on account of its mineral possibilities. Gold deposits on Wekusko lake were considered sufficiently rich to justify a considerable capital expenditure in their development and exploitation. These have been described by F. J. Alcock (1 and 6). A short description by R. C. Wallace of the recent gold discovery on Elbow lake appeared in the Canadian Mining Journal, 1921.

Notes on numerous gold mines and prospects in British Columbia have been presented by Resident Engineers (5) of the provincial Department of Mines and by members of the staff of the Geological Survey (1).

A contribution to our knowledge of the placer gold deposits of Yukon is made by W. E. Cockfield (1) who in a detailed report describes the deposits of Sixty-mile and Ladue rivers. The report also sets forth the general topographical and geological features of the section of country drained by these rivers.

Graphite.—A monograph by Hugh S. Spence (2) entitled "Graphite" contains descriptions of the known Canadian deposits of graphite together with notes on the history of their development. It deals with the different methods of concentrating and refining graphite, and the uses of the product, and presents a survey of the general situation of the graphite industry in Canada. Papers by H. P. H. Brumell on graphite in Quebec have appeared in the Transactions of the Canadian Mining Institute and in the Engineering and Mining Journal.

Iron.—In a paper entitled "Michipicoten Iron Ranges," W. H. Collins (6) describes an enormous body of sideritic iron ore found at the Helen mine, gives notes on the pyrite deposits of the Michipicoten area, points out the stratigraphic sequence to be observed in the iron ranges and the existing structural relations. Deposits of siderite occurring on Mattagami river about 80 miles north of the National Transcontinental railway have been examined and described by J. G. Cross (3) for the Department of Mines, Toronto. The limonite deposits of Taseko River valley, British Columbia, which have attracted considerable attention, are described by W. M. Brewer (5), F. J. Crossland (5) and J. D. Mackenzie (1).

Much interest has been shown in recent years in the mineral possibilities of the part of the country adjacent to Hudson bay. Very little had been known regarding the Belcher islands until recently. A description of the geological features of these islands and of the iron formation found on them is given by E. S. Moore in the Transactions of the Canadian Mining Institute, 1919, and by E. S. Moore and D. E. Woodbridge in the Engineering and Mining Journal, 1920 and 1921.

Lead and Zinc.—The argentiferous lead deposits of the Mayo district, Yukon, that have recently attracted much attention have been described by W. E. Cockfield (1). These are sufficiently rich in silver to bear the heavy transportation charges from the interior of Yukon.

The geological features of the Slocan area, British Columbia, are described by M. F. Bancroft (1), and papers by J. C. Beidelman and A. Mailhiot in the Canadian Mining Journal and the Transactions of the Canadian Mining Institute respectively give descriptions of a zinc-lead deposit of considerable promise near the head of Cascapedia river, Gaspé, Quebec.

Manganese.—The final report of the Munition Resources Commission of Canada presents the results of investigations made by J. C. Gwillim, G. C. Mackenzie and W. L. Uglow into numerous manganese deposits in Nova Scotia, New Brunswick, and British Columbia. The lack of shipping available during the war for the transportation of manganese ore from foreign sources rendered it imperative that North American deposits of sufficiently high grade material be opened and exploited to the utmost, and attention was thus directed to the possibilities of Canada's resources in manganese.

Molybdenite.—Owing to the demand during the war for molybdenite, examinations were made for the Munition Resources Commission of Canada by J. C. Gwillim of a great number of molybdenite deposits in the provinces of Nova Scotia, Quebec, Ontario, and British Columbia. Descriptions of these appear in the final report of the Commission. Papers on the molybdenite deposits of La Corne township, Abitibi, Quebec, and in the lower Ottawa valley by A. Mailhiot (4) and M. E. Wilson(6) respectively, have been published.

Nickel.—The nickel deposits of Canada continue to demand considerable attention from geologists, not disproportionate, however, to their economic importance. One of the most valuable contributions made in recent years bearing on the question of the origin of the Sudbury ores is that made by the staff of the International Nickel Company of Canada Limited (6), in an article describing the mining and smelting operations of the company. The article contains a description of the Creighton ore body and is illustrated by a cross section showing in an illuminating manner the geological relations existing between the ore body and adjacent rocks. It is claimed that facts have been disclosed that indicate that the ore was introduced in a molten condition along a plane of shearing in the footwall rocks adjacent to the norite after the norite had solidified. The question of the origin of the nickel-copper ores of Sudbury is also discussed by W. Lindgren and J. W. Young in Economic Geology and the Bulletin of the Canadian Institute of Mining and Metallurgy respectively.

Although Canada produces over three-quarters of the world's consumption of nickel much interest is taken in any discoveries that

might lead to an increase of the country's ore reserves. Results of investigations of the Windy Lake area which lies in that part of the Sudbury area known as the northern nickel range are presented by C. W. Knight (3). A number of other occurrences of nickel minerals in Ontario are described by the same writer (3), and a deposit lying south of lake Shebandowan west of Fort William is described by J. G. Cross (3). A deposit has been discovered on Maskwa river in the province of Manitoba in which minerals similar to those of the Sudbury district are associated with norite. R. J. Colony (6) who made an examination states that the copper content of a large number of samples analysed ranged from 0·68 per cent to 3·60 per cent, the nickel content from 0·29 per cent to 1·68 per cent and the platinum content from 0·01 ounces to 0·03 ounces per ton. The deposit has also been examined and mapped by W. S. McCann (1) who describes the geological relationships of the occurrence.

Petroleum.—The prominence of the oil question in recent years has led to much government investigation into the geological features of areas where it has been thought that conditions might exist favourable to the occurrence of petroleum. An area that has attracted world-wide attention is the Mackenzie River basin. Oil was struck in 1920 in a well drilled on Mackenzie river at a point 45 miles below Norman. The oil occurs in rocks of Devonian age. Formations of the Devonian system are of wide distribution throughout the Mackenzie basin, oil seepages are numerous, and further drilling operations may reveal great possibilities. The sedimentary succession and the structural features of the Norman area are described by E. M. Kindle and T. O. Bosworth (1), and by J. Ness (6), and the question of oil possibilities on Great Slave lake is discussed by G. S. Hume (1).

Considerable drilling has been done in the province of Alberta. Notes on geological conditions existing at the points where drilling operations were conducted, and on the progress of operations are given by D. B. Dowling (1). The results of detailed investigations in the operating oil field of Alberta on Sheep river are presented by S. E. Slipper (1), and a report on the geology of the Pouce Coupé area by J. A. Allan and A. E. Cameron is to be found in the Mining and Engineering Record.

Attention has also been given to the oil possibilities of the Peace River section of British Columbia. Investigations into the geological formations were made by J. C. Gwillim, J. A. Dresser and E. M. Spieker for the Department of Lands, British Columbia, by which reports were published.

A study has been made by M. Y. Williams (1) of the palæozoic formations exposed along Abitibi, Mattagami and Albany rivers with a view to ascertaining their oil possibilities. Mr. Williams (1) has also reported on the oil possibilities of Manitoulin island and on parts of southwestern Ontario.

Phosphate.—A monograph on phosphate in Canada by H. S. Spence (2) appeared in 1921. A chapter is devoted to the manufacture of phosphorus products in Canada, but the greater part of the report is devoted to a description of apatite deposits of the provinces of Ontario and Quebec. The history of phosphate mining in Canada shows that the industry flourished for a number of years. The discovery of the cheaply mined Florida deposits, however, had a serious effect upon the Canadian industry, and since about 1894 little phosphate has been produced except as a by-product in the mining of mica.

Platinum.—Owing to the increased demand during the war for platinum for use in the chemical industries and in internal combustion engines much interest was shown in the possibilities of obtaining a greater supply from Canadian sources. The Munition Resources Commission of Canada made investigations of the placers of Tulameen river, B.C., where a small annual production of platinum is made, of other placers in British Columbia and Alberta where the occurrence of platinum had been reported, and of certain sulphide deposits. The results of the investigations, which unfortunately did not lead to the discovery of any important sources of the metal, are set forth in the final report of the Commission, and in the publications of the Canadian Mining Institute.

Road Materials.—Investigations have been made by K. A. Clark, R. H. Picher, and H. Gauthier (2) into the materials suitable for road construction found in the vicinity of some of the main highways of the country. Outcrops of bed rock and deposits of boulders and gravel have been examined and laboratory tests made of samples taken from these deposits. Some of the areas examined are those along the Montreal-Toronto highway, from the Quebec boundary to Frescott and from Napanee to Port Hope; different points in eastern Ontario and southwestern Quebec; between Winnipeg and Brandon; and the Rocky Mountain park. The problem of the utilization of the bituminous sand of Athabaska river in road construction in Alberta is discussed by G. C. Parker (2).

Salt.—The Malagash salt deposit, Nova Scotia, which was discovered a few years ago, is described by A. O. Hayes (1). The salt is pure enough and near enough to the surface to be recovered economically by mining and it is the only deposit in Canada that is worked by this method. The main salt industry of the country is in Ontario where borings are made and the salt brought to the surface in the form of brine.

The discovery of rock salt in a boring made at McMurray, Northern Alberta, is of importance. In a well drilled to a depth of 685 feet a bed of 14 feet of transparent commercial rock salt was penetrated between 648 and 662 feet. In the lower 55 feet of the well there is possibly 25 to 40 feet of comparatively pure rock salt interbedded with anhydrite and shale. The discovery is described by J. A. Allan in the Second Annual Report on the Mineral Resources of Alberta.

Silica and Moulding Sand.—A preliminary report on the results of investigations of silica deposits of eastern Canada has been made by L. H. Cole (2). Short descriptions are given of the character of numerous deposits of sand, sandstone, quartzite and quartz of high silica content together with analyses of samples. The results indicate that there are in eastern Canada a number of localities conveniently situated with respect to consuming centres where good grades of silica could be profitably produced. Notes are also given on deposits of moulding sand in eastern Canada.

Silver.—Two silver camps that have recently attracted considerable attention have received detailed study by the Geological Survey. These are the Mayo district, Yukon, and the Salmon River district, British Columbia. The former, where rich argentiferous galena is being mined, has been mapped by and reported on by W. E. Cockfield (1); the latter has been studied by J. J. O'Neill, S. J. Schofield and G. Hanson (1), short reports have been made and a map prepared.

The ore deposits of Cobalt camp have not lost interest and contributions to the study of the origin of these ores were made in Economic Geology, 1920, by A. R. Whitman and W. L. Whitehead. The Gowganda camp, which might be consided a satellite of the Cobalt camp, has been re-studied and reported on by A. G. Burrows (3). A study of the geology of the north shore of lake Superior in the vicinity of Silver islet where a rich silver deposit was mined many years ago was made by T. L. Tanton (1 and 6) with a view to determining the relationship of mineralization to the faulting system, and thus giving direction to further search for silver.

Tungsten.—The final report of the Munition Resources Commission of Canada contains reports by J. C. Gwillim on tungsten deposits of New Brunswick and Nova Scotia. Near Burnt Hill brook, New Brunswick, quartz veins carrying wolframite are found in slates near the contact of an intrusive granite mass; 12 miles southeast of Middle Musquodoboit, Nova Scotia, scheelite-bearing veins are found in the altered sediments known as the gold-bearing series. Shipments have been made from both places.

Miscellaneous.—Mineral deposits of a great variety are described by L. Reinecke (1) in a report on the mineral deposits between Lillooet and Prince George, B.C. Among the most important of these are hydromagnesite and epsomite or hydromagnesium sulphate, commonly known as epsom salt. The epsomite occurs in commercial quantities in small lakes having no outlet. These lakes are found near Clinton, B.C. Similar deposits occur near Basque and on Kruger mountain. An estimate is made of the amount of commercial material available in the hydromagnesite deposits. Mr. Reinecke also gives interesting notes on the geological occurrence of peridot found in basalt on the summit of Timothy mountain.

Certain deposits of infusorial earth, also known as diatomaceous earth, occurring at a number of points in the western part of Nova

Scotia have been described by E. R. Faribault (1). A deposit of this material in Colchester county has been worked for many years, the product being used in the manufacture of rubber goods and silver polish.

The results of a study of the Pleistocene geology of parts of Manitoba have been presented by W. A. Johnson (1). This includes townships 1-10, ranges 8-18, east of the principal meridian, and townships 30-37, ranges 16-23, west of the principal meridian. The soils derived from the Pleistocene deposits are classified and the report is accompanied by maps showing the distribution of the soils.

An interesting occurrence of native mercury on Sechart channel, Vancouver island, is thought by V. Dolmage (1), who examined it to be encouraging enough to justify thorough prospecting.

Investigations made by J. C. McLennan (2) and others show that the element helium is found in the Bow Island natural gas, Alberta, to the extent of 0·29 per cent. Helium is a non-inflammable gas superior to hydrogen for the inflation of balloons.

H. Frechette (2) has made a study of the limestone deposits of Ontario and Quebec and presents analyses of samples of limestone and dolomite obtainable at different quarries.

Surveys of peat bogs in Ontario and Quebec have been made by A. Anrep (1).

V.—AREA AND POPULATION.

Area by Provinces and Territories.—Table 1 shows the total area of the Dominion in land and water and its distribution into provinces and territories.

1.—Land and Water Area of Canada by Provinces and Territories as in 1921.

Provinces.	Land.	Water.	Total Land and Water.
	sq. miles.	sq. miles.	sq. miles.
Prince Edward Island	2,184	–	2,184
Nova Scotia	21,068	360	21,428
New Brunswick	27,911	74	27,985
Quebec	690,865	15,969	706,834
Ontario	365,880	41,382	407,262
Manitoba	231,926	19,906	251,832
Saskatchewan	242,808	8,892	251,700
Alberta	252,925	2,360	255,285
British Columbia	353,416	2,439	355,855
Yukon	206,427	649	207,076
Northwest Territories—			
Franklin	500,000	–	500,000
Keewatin	205,973	6,851	212,824
MacKenzie	501,953	27,447	529,400
Total	**3,803,336**	**126,329**	**3,729,665**

The water area is exclusive of Hudson bay, Ungava bay, the bay of Fundy, the gulf of St. Lawrence and all other tidal waters, excepting that portion of the river St. Lawrence which is between Pointe-des-Monts and the foot of lake St. Peter, in Quebec.

Increase of Population.—The decade between 1911 and 1921 was peculiarly unfavourable to a rapid growth of population among the white races of the world, since by them the Great War was mainly waged. The war and the pestilence and famine which followed the war both devastated Europe and affected the newer countries by drying up the sources of their immigration. Their effect on immigration to Canada will be seen in Table **20** of this section of the Year Book.

According to the final results of the sixth census of the Dominion of Canada, the total population on June 1, 1921, was 8,788,483, as compared with 7,206,643 on June 1, 1911, an increase of 1,581,840 or 21·95 per cent in the decade, as compared with 34·17 per cent during the decade from 1901 to 1911. Reduced as is the rate of increase during the past ten years, it is yet higher than the rate of increase in any other of the principal countries of the British Empire except Australia, where the rate was only slightly greater, and considerably higher than that of the United States.

The countries which comprise the British Empire, as also the United States, have on the whole suffered much less in actual loss of life from the war and its consequences than have the continental countries of Europe. None of them has actually declined in population during the period, as many continental European countries have done. Their percentage increases, however, have in almost all cases been lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,885,242, or 4.93 per cent, as compared with an increase of 10·89 per cent in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,288, or 2·5 per cent, as compared with 6·5 per cent between 1901 and 1911.

Of the oversea Dominions, New Zealand increased from 1,008,468 to 1,218,270 or 20·8 per cent, as compared with 30·5 per cent, while the white population of South Africa increased from 1,276,242 to 1,522,442 or 19·3 per cent. On the other hand, the Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,436,794 in 1921, or 22·04 per cent, as compared with 18·05 per cent. The population of the continental United States increased between 1910 and 1920 from 91,972,266 to 105,710,620, an increase of 14·9 per cent as compared with 21 per cent in the preceding decade.

Considering now the Dominion of Canada itself, it becomes evident from Tables **2** and **3** that in this country, as formerly in the United States, there is a distinct movement of population from East to West. In the decade from 1911 to 1921, there occurred in

the four Western provinces an increase of population from 1,720,601 to 2,480,664 or 44·2 per cent, while the five Eastern provinces increased from 5,471,023 to 6,295,189, an increase of 824,166 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 15 per cent over the 1911 population. The same conclusion may be deduced from Table **3**, which shows that while in 1871 only 2·96 per cent and in 1881 only 3·88 per cent of the population of the country dwelt west of the Lake of the Woods, the percentage in 1891 was 7·24, in 1901, 12·02, in 1911, 24·09 and in 1921, 28·37 per cent. On the other hand, the three easternmost Maritime provinces, which in 1871 contained 20·80 per cent of the population of the Dominion, had in 1881, 20·14 per cent, in 1891, 18·22 per cent, in 1901, 16·64 per cent, in 1911, 13·01 per cent, and in 1921 only 11·38 per cent of the population. Ontario and Quebec—the old pre-Confederation Province of Canada—still remain the chief centre of population, their population being in 1921 60·25 per cent of the total as compared with 76·24 per cent in 1871, 75·98 per cent in 1881, 74·54 per cent in 1891, 71·34 per cent in 1901, and 62·90 per cent in 1911. In other words, the net result of the half century has been that in 1921 only three-fifths of the population of the Dominion lived in these provinces as compared with more than three-fourths in 1871.

The absolute and percentage increases of population by provinces and territories are shown for the last decade in Table **4**, which shows that Alberta and Saskatchewan increased proportionately most rapidly during the period, followed by British Columbia and Manitoba. Ontario and Quebec showed a fair percentage of increase and the Maritimes a small one, while Prince Edward Island—an almost purely agricultural province—and the Yukon—a mining camp—showed a decline in population. Absolute increases since 1871 are shown by decades in Table **5**, and percentage increases since 1871 by decades in Table **6**.

2.—Population of Canada by Provinces and Territories in the Census years 1871 to 1921.

Rural and Urban Population.—In Table 7 are given statistics showing the growth of rural and urban population respectively since 1891. For the purposes of the census, the population residing in cities, towns and incorporated villages has been defined as urban, and that outside of such localities as rural. Thus the distinction here made between "rural" and "urban" population is a distinction of provincial legal status rather than of size of aggregations of population within limited areas. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban, (the laws of Saskatchewan, for example, making provision that 50 people actually resident on an area not greater than 640 acres may claim incorporation as a village, while the Ontario law now requires that villages asking for incorporation shall have a population of 750 on an area not exceeding 500 acres), the line of demarcation between rural and urban population is not uniformly drawn throughout the Dominion, as far as comparable aggregations of population are concerned. To a limited extent, however, Table 9 will permit the student of population statistics to make, at least for Canada as a whole, his own line of demarcation between rural and urban population.[2]

While a summary comparison between urbanization in Canada in 1921 and in the United States in 1920 would lead us to the conclusion that our country, though far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, viz., 49·52 per cent in Canada as compared

[1] The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of immense areas to form the provinces of Alberta and Saskatchewan and the Yukon Territory, as well as to extend the boundaries of the older provinces of Quebec, Ontario and Manitoba.

[2] In the United States, urban population is classified by the Census Bureau as that residing in cities and other incorporated places having 2,500 inhabitants or more, and in "towns" having 2,500 inhabitants or more in Massachusetts, New Hampshire and Rhode Island. While such "towns," under the forms of local government existing in these states, are partly rural in character, the United States Census Bureau considers that the total urban population of these states is not greatly exaggerated thereby.

with 51·4 per cent in the United States, the fact that in the United States inhabitants of places having under 2,500 population are included with rural population, while in Canada the inhabitants of many places with less than 100 population are classed as urban, must be taken into account. A fairer basis of comparison is secured if the same population limits are taken for both countries, as may be done by using Table **9**. Thus, at the census of 1920 the United States had 25·9 per cent of its population resident in cities of 100,000 and over, while Canada in 1921 had only 18·87 per cent of its population in such places. The United States had an additional 16·4 per cent of its population residing in cities of between 10,000 and 100,000 population, and 4·7 per cent in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 13·32 per cent, and 4·36 per cent respectively of its population. Thus, taking all places of 5,000 and over—the lowest population for which comparative figures are readily available—47 per cent of the population of the United States resided in such places as compared with 36·55 per cent of the population of Canada, showing the much higher degree of urbanization which has been reached in the United States—a natural thing in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table **7** that in the last decade, as in the previous one, urban communities absorbed somewhat over two-thirds of the total increase in population, with the result that the urban population of Canada was in 1921 nearly equal to the rural. Out of every 1,000 persons in the country 505 were resident, on June 1, 1921, in rural and 495 in urban communities, as compared with 545 in rural and 455 in urban communities on June 1, 1911, 625 in rural and 375 in urban communities in 1901, and 682 in rural and 318 in urban communities in 1891.

From Table **9**, showing the distribution of urban population in Canada by size of cities and towns, it becomes evident that for the first time in its census history Canada possesses cities of more than half a million population. These are Montreal and Toronto, with 618,506 and 521,893 inhabitants respectively, the former having in its neighbourhood several "satellite" cities, Verdun, Westmount, Lachine, Outremont, which, with other smaller towns in its vicinity, bring the population of "Greater Montreal" to the 700,000 mark. No other city has attained the 200,000 mark, but during the past decade Hamilton and Ottawa have been added to Winnipeg and Vancouver as cities of over 100,000 population, while Quebec, which in 1911 was, together with Hamilton and Ottawa, in the 50,000 to 100,000 class, has been joined in that class, though at a considerable interval, by Calgary, London, Edmonton and Halifax. Details of the population of these and other smaller cities and towns of 5,000 and over, are given by censuses from 1871 to 1921 in Table **11**, while the populations of urban communities having a population of from 1,000 to 5,000 are given for 1901, 1911 and 1921 in Table **12**.

[1] The population (98,967) in territory now comprised in the provinces of Alberta, Saskatchewan and in the Yukon and Northwest Territories was classified as rural in the Census of 1891. [2] Volume 1, Census 1911, places the urban population of Alberta for that year at 141,937. Included in this figure was the population (5,250) of twelve places which, according to the Report of the Municipal Commissioner for Alberta, were not then incorporated. The places so included were Aetna, Bankhead, Bellevue, Bickerdike, Canmore, Cardiff, Exshaw, Hillcrest, Passburg, Queenston and Elmpark. The correction resulting from this and from other small adjustments consequent upon more definite knowledge as to incorporated areas, places the urban population for 1911 at 137,662. Similar corrections have been made in the urban and rural figures for the Census of 1901. [3] As corrected in Census Report, Prairie Provinces, 1916. [4] As changed by Extension of Boundaries Act, 1912. [5] Corrected by information received since Bulletin 1 was printed, which transferred population of Shediac and Hampton to urban column and population of Salisbury to rural. [6] Corrected by information received since Bulletin 2 was printed, giving Clark's Harbour as an incorporated town. [7] As changed by Extension of Boundaries Act, 1912. [8] The urban population of 970,791 shown in Volume 1, Census 1911, is reduced to 966,842 by the transfer of the population of Maniwaki, Martinville, Moisie, St. Bruno, St. Martin and St. Vincent de Paul from urban to rural; by adjustments in area of the villages of Ste. Anne and Ste. Genevieve; and Extension of Boundaries Act, 1912. [9] Urban and rural population for 1911 and 1901 are as corrected in Census Report, Prairie Provinces, 1916. [10] As reduced by Extension of Boundaries Act, 1912.

8.—Percentage Distribution of Rural and Urban Population by Provinces and Territories, 1891, 1901, 1911 and 1921.

Provinces.	1891.		1901.		1911.		1921.

POPULATION OF THE PRAIRIE PROVINCES.

The Census and Statistics Act, 1905, provided for the taking of a census of population and agriculture in Manitoba, Saskatchewan and Alberta in 1906 and in every tenth year thereafter, thus instituting, in addition to the general decennial census for all Canada, a quinquennial census of population and agriculture for the three Prairie Provinces. The quinquennial census of Manitoba, Saskatchewan and Alberta was therefore taken as for June 1, 1916, and the complete results were published in a Report dated January 12, 1918. A summary of the principal data was published in the Year Book for 1918, pages 105-112.

Total Population of Prairie Provinces.—The male and female population of Manitoba, Saskatchewan and Alberta (a) by provinces, (b) by the electoral districts constituted by the Representation Act, 1914 (4-5 Geo. V, c. 51), and (c) by cities, towns and villages, as compared with the population by sex for 1911 and by totals for 1901 and 1906, was published in the Year Book of 1916-17 (pp. 95-105). The total population of the three prairie provinces in 1916 was returned as 1,698,220, compared with 1,328,725 in 1911, 808,863 in 1906 and 419,512 in 1901. As the population of the prairie provinces in 1921 was 1,956,082 the increase during the five year period since 1916 was 257,862 or 15·18 per cent. This comparatively low rate of increase as compared with the increase of 28 per cent during the five years ended 1916 was undoubtedly due to the effect of the war in restricting immigration. Table **13** shows the population of the prairie provinces for 1901, 1906, 1911, 1916 and 1921, the population being distinguished by sex for 1911 and 1916.

POPULATION OF THE BRITISH EMPIRE.

During the decade 1911-1921 the boundaries of the British Empire were contracted by the voluntary giving up of Egypt and expanded by the addition of various territories as a result of the war. The increases of territory were mainly in Africa, where the Tanganyika Territory, Southwest Africa, and portions of the Cameroons and Togoland were added to the Empire, with an aggregate area of 731,000 square miles and an estimated population of slightly over 5,000,000. In Asia the territories acquired by mandate from the League of Nations include Palestine and Mesopotamia, with 3,619,282 inhabitants on an area of 152,250 square miles. In the Pacific the territories added to the Empire include Western Samoa, the Territory of New Guinea, the Bismarck Archipelago and part of the Solomon Islands, all of which were formerly German possessions. According to the most reliable estimates the total area of these regions is 90,802 square miles with a population of 637,051.

Statistics of the area and population of the territories included in the British Empire in 1921 are given in Table **16**, together with comparative figures of population for 1901 and 1911.

The Maori population (43,143 in 1901 and 49,844 in 1911) is also excluded. [28] Population in 1914. [29] Preliminary return.

VITAL STATISTICS.

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.[1] In the beginning, only one copy of such records was made, but in 1678 the Sovereign Council of Quebec ordered that in future such records should be made in duplicate, and that one copy, duly authenticated, should be delivered to the civil authorities. This arrangement was continued after the cession of the country to England, and was extended to the newly-established Protestant churches by an Act of 1793, but the registration among these latter remained seriously defective, both in Lower Canada and in the newly-established province of Upper Canada.

In English-speaking Canada, vital statistics were from the commencement seriously defective, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. While a law existed in Upper Canada requiring ministers of religion to deposit duplicates of their registers of baptisms, marriages and deaths with the clerks of the peace for transmission to the provincial secretary, this law remained practically a dead letter. Again, the efforts made to secure records of births and deaths at the censuses of 1851 and 1861 produced most unsatisfactory and even ridiculous results, as was pointed out by Dr. J. C. Taché, secretary of the board of registration and statistics, in a memorial published in the report of the Canadian Minister of Agriculture for the year 1865. Nevertheless, in spite of the inherent unsoundness of securing at a point of time in a decennial census a record of births and deaths occurring over a considerable period of time, this method was persisted in down to 1911, when the obviously untrustworthy character of the results obtained led to the discarding of the data obtained at the inquiry. In Montreal and Toronto, for example, the local records showed 11,038 and 5,593 deaths respectively in the calendar year 1910, while the census records showed only 7,359 and 3,148 deaths respectively in the year from June 1, 1910, to May 31, 1911. Similar discrepancies were shown for other areas, proving the census data to be very incomplete.

The Dominion Government instituted in the early 80's a plan for compiling the annual mortuary statistics of cities of 25,000 population and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax and St. John. By 1891 the list had grown to 25, at a time when in most of the provinces the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion

[1]For a summary of the vital statistics of the Roman Catholic population from 1610 to 1883, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details by years of this movement of population, see Vol. V of the Census of 1871, pp. 160-265 and Vol. IV of the Census of 1881, pp. 134-145.

and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling and publishing the vital statistics of the Dominion. This resolution had, however, no immediate practical results in securing accurate or comparable vital statistics.

Each province (except New Brunswick, which had no vital statistics) enacted its own legislation on vital statistics and administered such legislation according to its own individual methods. While the vital statistics of Ontario were published in considerable detail annually since 1871, the arrangements for the collection of data were unsatisfactory. Only in 1906 was the publication of vital statistics begun in Prince Edward Island (no report for 1912 has ever been issued), and in Nova Scotia the publication of vital statistics dates only from 1909. Because of the *lacunæ*, and even more because of the incomparability of facts collected, of methods of collection and of standard of enforcement, Canadian vital statistics remained extremely unsatisfactory and impossible to be compiled on a national basis, as was pointed out by the 1912 commission on official statistics, which recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial and international comparisons. By effective co-operation of the provinces with the Dominion this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements." The scheme of co-operation, thus outlined, has now been brought into effect as a consequence of the establishment of the Dominion Bureau of Statistics, under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics, and the Dominion-Provincial conferences on vital statistics held in June and December, 1918.

At the conferences of 1918, it was agreed: (1) that the model Vital Statistics Act prepared by the Dominion Bureau of Statistics, when accepted by the legislatures, should form the basis of the vital statistics legislation of the several provinces, thus securing uniformity and comparability; (2) that the provinces should undertake to obtain the returns of births, marriages and deaths on the prescribed forms as approved and adopted at the December Conference, the Dominion Bureau of Statistics to supply the forms free of charge; (3) that the provinces should forward to the Dominion Bureau of Statistics, at such times as might be agreed upon, either the original return of births, marriages and deaths, or certified transcriptions of the same; the Dominion Bureau of Statistics to undertake the mechanical compilation and tabulation of the same.

Under the scheme outlined above, the vital statistics of all the provinces, except Quebec, have been secured and compiled on a uniform basis for the year 1920, and with the commencement of 1921, it became possible to issue complete monthly statements for the eight provinces. The first annual report to be issued will be a report for the year 1921.

Summary statistics showing the births, marriages and deaths in the nine provinces of Canada during 1920, with the birth, marriage and death rates as compared with the estimated population of that year are presented in Table **17**. The figures for Quebec are taken from the provincial returns. The totals for the nine provinces are approximately equivalent to what they would be for the Dominion as a whole, since the Yukon Territory and the Northwest Territories, which are not as yet covered by the new scheme of vital statistics, contain between them less than 1-700th of the population of the Dominion. This summary table shows births, marriages, deaths, crude annual birth, marriage and death rates for the provinces, based upon the estimated population for 1920, as well as the excess of births over deaths. In Table **18** will be found an analysis of the birth statistics for the year, showing living births by sex, single births, births of twins and triplets, illegitimates, and still-births. The proportion of illegitimate to total living births in the eight provinces for which statistics were available was very low, 18 per 1,000.

In Table **19** are presented statistics of births, marriages and deaths in the principal cities of Canada for the calendar year 1920. Since the local estimates of population have been shown by experience to be sometimes seriously defective, the census populations, as shown by the Census of 1921, are included, and are taken as a basis for the determination of the annual natural increase per 1,000 population, this involving a slight under-estimate of the rate of natural increase.

Two important considerations should be borne in mind by the students who use either these tables or provincial reports for comparative purposes.

First, in spite of the improvements recently effected, registration generally, and the registration of births in particular, is not universally carried out. The great extent of the country, and the isolation of many of its inhabitants, partly account for this unsatisfactory situation.

Secondly, the great differences in the age and sex distribution of the population in different provinces, as shown by the Census of 1911, (these statistics are not yet available from the Census of 1921), make comparisons (of birth rates, for instance), as among the provinces unfair and misleading. Thus, for instance, in British Columbia in 1911, there were only 428 females of ages 15 to 49 to every 1,000 males of these ages, while in Quebec there were 972 and in Prince Edward Island 1,027. Evidently in view of the enormous disproportion between the sexes in British Columbia, the crude birth rate per 1,000 of population in that province cannot properly be compared with the crude birth rate in Quebec or Prince Edward Island. Again, in consequence of different age distributions of population in the different provinces—the Prairie Provinces, for instance, have a very young population because of the healthy young immigrants whom they attract—a comparison of crude death-rates of the provinces is misleading. In the Prairie Provinces, taken as a unit, only 126 per thousand of the 1911 population and 137 per thousand of the 1916 population had passed 45 years of age, while in Quebec 176,

in Ontario 218 and in Prince Edward Island 249 per thousand of the population were in 1911 over 45 years of age. These latter provinces, having a much larger proportion of persons of advanced ages, will inevitably have a higher crude death rate per thousand of population than the Prairie Provinces.

17.—Number of Births, Marriages and Deaths, by Provinces, 1920.

IMMIGRATION.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the evils which they know at home rather than take the risks of a new departure at a distance.

The above proposition is aptly illustrated by the statistics of Table **20,** which show that during the past 25 years, immigration was at its minimum in the year of deepest depression, 1897, that it steadily increased from that time forward until 1908, that a decline took place in the fiscal year ended March 31, 1909, on account of the short depression of 1908, that thereafter immigration steadily increased till 1913, while the fiscal year ended March 31, 1914, showed a decline due to the depression which occurred in the year preceding the war. In the fiscal years 1915 to 1919 political rather than economic conditions restricted immigration, but with the expansion of business at the end of the war our immigration was more than doubled, while the depression which characterized the calendar year 1921 is reflected in the declining immigration of the fiscal year ended March 31, 1922. The improvement already visible in business conditions will undoubtedly be shortly reflected in increasing immigration.

Immigration has throughout Canadian history played a great part in reinforcing Canadian population, especially the English-speaking population. While the great majority of French-Canadians can trace their genealogy back to ancestors who left the Old World 200 or 250 years ago, or even longer—the great bulk of English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in Canada. During the middle third of the nineteenth century there was a great English-speaking immigration which settled the province of Ontario and made it for the first time more populous than the sister province of Quebec, thus bringing about the agitation for representation by population. Thereafter immigration slackened until the dawn of the twentieth century brought another flood of immigrants to the newly opened territories of the Great North West, resulting in an increase of population between the censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

Immigration during the second decade of the twentieth century promised at its commencement to be even greater than during the first. In its first three years no fewer than 1,141,547 immigrants are reported as having entered Canada for purposes of settlement. If this rate had been maintained, the population of Canada in 1921 would certainly have been in excess of ten millions instead of being less than nine millions. The war, which commenced on August 4, 1914, dried up the sources of our immigrants in Great Britain and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrants from the United Kingdom in 1918 only numbered some 3,000 as compared with 150,000 in 1913; from Continental Europe immigrants numbered only about 3,000 in 1916 as compared with approximately 135,000 in 1914. Since the war, immigration, though increasing, has never approached that of the pre-war period, which is probably a fortunate circumstance, since the capital necessary to set in employment such great bodies of labourers as came to Canada in 1912 and 1913 could hardly have been secured.

Altogether, the total number of immigrants entering Canada between June 1, 1911 and June 1, 1921 (the dates of the two censuses), was 1,728,921, whereas the total increase of population between these dates was only 1,581,840. This clearly indicates a return movement of immigrants of very considerable proportions, especially as our vital statistics show a fairly high rate of natural increase of population, amounting to 134,664 in the calendar year 1920 (see Table 17 of this section), or at the rate of 15 per 1,000 of population per annum. Until accurate official statistics of emigration are secured, the demographic statistics of Canadian population, which have been so greatly improved in the immediate past by the collection of uniform and accurate vital statistics, must continue to be incomplete.

Immigration Policy.—The normal immigration policy of Canada, as is natural in so sparsely peopled a country, aims at attracting suitable immigrants from older and more densely settled countries, including above all, those ready to take part in the cultivation of the soil, whether farmers with capital or farm labourers, while female domestic servants, too, are always regarded as desirable immigrants, the demand for these latter being continuously greater than the supply. On the other hand, the immigration of persons mentally defective, of persons physically defective and without means of livelihood, of criminals and prostitutes, beggars and vagrants, alcoholics, revolutionaries, and of illiterates over 15 years of age unless belonging to a family already resident in Canada, is prohibited under the Immigration Act, which also provides in section 37 that immigrants may be required to possess a prescribed amount of money, and in section 38 that the Governor-General in Council may at any time prohibit the landing of immigrants coming otherwise than by continuous journey from their native country or that of which they are naturalized citizens, and may also prohibit temporarily or permanently the admission of immigrants belonging to any race or nationality or of immigrants of any specified class or occupation, on account either of economic conditions prevailing in Canada or of the unfitness of such persons for Canadian citizenship. An Order in Council issued under this clause on May 9, 1922, prohibited the landing of immigrants, unless it could be shown that the immigrant was an agriculturist, a farm labourer, or a female domestic servant. The immigration officer in charge was, however, allowed also to admit the wives and families of persons already settled in Canada, nationals of any country with which there is in operation a special treaty or convention regarding immigration, British subjects coming directly or indirectly from Great Britain or Ireland, the self-governing Dominions, Newfoundland and the United States of America, having money enough to maintain themselves until employment was secured, and finally American citizens whose labour or service was shown to be required in Canada. The Immigration Act also makes provision for the rejection and return of immigrants applying for admission to Canada and for the deportation of those misbehaving or becoming public charges within two years after admission.

Oriental Immigration.—The immigration to Canada of labourers belonging to the Asiatic races, able because of their low standard of living to underbid the white man in selling their labour, is fundamentally an economic rather than a racial problem, affecting most of all those portions of the country which are nearest to the East and the classes which feel their economic position threatened. As a result of the influx of Chinese into Canada, legislation was passed in 1885 (48-49 Vict., c. 71) providing that thereafter Chinese of the labouring class should be required as a condition of their entry into Canada to pay a head tax of $50 each; on January 1, 1901 (63-64 Vict., c. 32), this amount was increased to $100 and on January 1, 1904 (3 Edw. VII, c. 8) to $500. This tax is paid by Chinese immigrants, with the exception of consular officers, merchants and clergymen and their families, tourists, men of science, students and teachers, a record showing the number of Chinese admitted who paid the tax, the number exempt from it, and the revenue realized being given by years from 1886 in Table **27**. In recent years the number of Chinese immigrants entering Canada has been much reduced, owing to the operation of Orders in Council (renewed every six months from December 8, 1913, and replaced by an Order in Council of June 9, 1919) under which the landing in British Columbia of skilled and unskilled artisans and labourers is prohibited.

Japanese immigration to Canada was comparatively negligible prior to the Russo-Japanese war of 1904-5, but thereafter assumed considerable proportions, no fewer than 7,601 Japanese immigrants entering Canada, largely from Hawaii, in the fiscal year ended March 31, 1908, and settling mainly in British Columbia. In that year an agreement was made with the Japanese Government under which the latter undertook to limit the number of passports issued to Japanese emigrating to Canada, while the Canadian Government agreed to admit those possessing such passports, while prohibiting others from entering. The statistics of Table **28** show that in this way Japanese immigration has been effectively limited.

Hindoo immigration to Canada, like Japanese, is shown by the statistics of Table **28** to have been negligible down to 1907, when no fewer than 2,124 Hindoo immigrants arrived. However, as a consequence of the operation of section 38 of the Immigration Act of 1910, Hindoo immigration has since that date been comparatively small. A resolution of the Imperial War Conference of 1918 declared that "it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities." However, it was recommended that Indians already permanently domiciled in other British countries should be allowed to bring in their wives and minor children, a recommendation which was implemented, so far as Canada was concerned, by Order in Council of March 26, 1919. However, in the fiscal years ended March 31, 1921 and 1922, only 10 and 13 Hindoo immigrants respectively were admitted.

Under Order in Council of April 12, 1922, no immigrant of any Asiatic race is permitted to land in Canada who does not possess in his own right $250; this regulation, however, does not apply where there is in operation a special treaty, agreement or convention regulating immigration.

Immigration Statistics.—Summary statistics of the number of immigrants entering Canada from the United Kingdom, the United States and other countries are furnished by years from 1897 to 1922, in Table **20**, while immigrants of the last eight years are analyzed by nationalities in Table **21**. Tables **22** and **23** deal respectively with rejections of immigrants on arrival and deportations after admission. In Table **24** statistics are presented of juvenile immigrants brought out by charitable organizations and the demand for their services. Tables **25** and **26** deal with the occupations and destinations of immigrants to Canada, Tables **27** and **28** with Chinese and other oriental immigration, while Table **29** states, on the basis of the figures of the Department of Finance, the expenditure on immigration by years since 1868.

VI.—EDUCATION.

GENERAL FEATURES OF CANADIAN EDUCATION SYSTEMS.

Under the British North America Act, 1867, the right to legislate on matters respecting education was reserved exclusively to the provincial legislatures, subject to the maintenance of the rights and privileges of the denominational and separate schools as existing at the time of union or admission of provinces. In Ontario, Roman Catholics, Protestants and coloured people have each the right to establish "Separate Schools" for elementary education, the local rates for the support of these schools being separately levied and applied. In Quebec, the religious minority in any municipality, whether Roman Catholic or Protestant (the Jews being "Protestants" for all the purposes of the School Law), may dissent and maintain its own elementary and model schools and academies or high schools, the taxation of the minority being separate from that of the majority for the three classes of school, except that in the case of the assessment of corporations, the taxes are levied by the majority and divided between the majority and minority in proportion to the number of children of school age. In Saskatchewan and Alberta a separate school may be established by the minority, whether Protestant or Roman Catholic, subject, however, to identical regulations as to courses, certificates, inspection, etc. In the remaining provinces there are special provisions for the education of Roman Catholics in the larger cities and towns.

In all the provinces the cost of education is defrayed from the public revenues, provincial and local, and public elementary education is free to parents or guardians, except for certain small fees which are payable in parts of the province of Quebec. What is understood in most provinces as secondary education, that is, work of high school grade, is also either free or subject to fees so small as to be seldom or never prohibitive. With the exception of Quebec all the provinces have laws providing for compulsory education, but under conditions that differ as between one province and another. As a rule, the provincial laws provide for uniformity in the training of teachers, the use of text books and the grading of pupils. Secondary schools or departments under government control and colleges or universities for higher education, exist in all the provinces, and the three classes of teaching institution are more or less co-ordinated to allow of natural transition from the lower to the higher. Arrangements for the superannuation of teachers are applied in most of the provinces.

Recent movements in the direction of nature study, manual instruction, school gardens, agriculture, domestic science and technical education are all energetically in progress.

HIGHER EDUCATION IN CANADA.

Higher education in Canada is provided for by a number of universities and colleges. Of the universities, Toronto, McGill (Montreal), and the University of Montreal, are the largest. The oldest university in Canada, viz., King's College, Windsor, Nova Scotia, dates from 1789, and claims to be also the oldest university in His Majesty's Overseas Dominions. Several of the universities are affiliated to the older universities of the mother country, viz., Oxford, Cambridge and Dublin, whilst some of the smaller Canadian universities, as well as most of the colleges, in Ontario and Quebec are affiliated to either Toronto or McGill. In the West, provincial universities have been established for Manitoba at Winnipeg (1877), Saskatchewan at Saskatoon (1907), Alberta at Edmonton (1906) and British Columbia at Vancouver (1907), while in the East, Toronto (1827) and New Brunswick (1800) are provincial universities.

Some of the universities and colleges are under the control of religious denominations, as follows:—

Anglican or Church of England in Canada:—Kings' College, Windsor, N.S.; University of Bishop's College, Lennoxville, Quebec; University of Trinity College, Toronto; Wycliffe College, Toronto; and Emmanuel College, Saskatoon.

Roman Catholic Church:—St. Dunstan's University, Charlottetown, P.E.I.; University of St. Francis Xavier, Antigonish, N.S.; University of St. Joseph's College, St. Joseph, N.B.; Laval University, Quebec; University of Montreal, Montreal; University of Ottawa, Ottawa; St. Michael's College, Toronto.

Other Denominations:—Knox College, Toronto (Presbyterian); Mount Allison University, Sackville, N.B., Victoria University, Toronto, and Wesley College, Winnipeg (Methodist); Acadia University, Wolfville, N.S., McMaster University, Toronto, and Brandon College, Brandon, Manitoba (Baptist).

EDUCATION STATISTICS OF CANADA.

Statistics of Public Schools.—In the Tables numbered **1** to **11** an attempt is made to bring together by provinces (1) the number of publicly controlled schools, teachers and pupils, with the average attendance of the pupils; (2) the number of teachers and pupils in normal schools for the training of teachers; (3) statistics of secondary schools so far as they are separately given; (4) the statistics of vocational schools under public control; (5) the amount of receipts and expenditure for public education under the school law of each province and (6) the average annual salaries of teachers by provinces.

In Tables **1** and **2** the number of schools, teachers and pupils in all the provinces includes both elementary and secondary schools or grades; in Nova Scotia, New Brunswick and Saskatchewan the term "school" has a technical significance, being applied to a class with one teacher, irrespective of the number of classes in a school building. The classical colleges of Quebec are not included in Table **2**

but are given later in Table 4. In Manitoba the sex of the pupils is not separately distinguished. Statistics of secondary schools are separately available for Ontario, British Columbia and Saskatchewan. They are given in Tables **5, 6, 7** and **8**. The academies of Quebec take up both the elementary and secondary grades of school work, and are not all classed in the reports as secondary schools. Statistics of teachers in training in seven of the nine provinces are given for the years 1901-1921 in Table **3.**

Growth of Expenditure on Public Education.—Probably the most remarkable feature of these statistics is the extraordinary growth during the present century of the expenditure upon public education. In 1901, the first year of the century, the total expenditure for the purposes of public education in Canada was $11,751,625; in 1921 or the latest year reported, as shown by Table **1**, it was $102,561,425, an increase of $90,809,800, or 773 p.c.

Statistics of Higher Education.—In Tables **12-20** are presented statistical particulars relating to the universities and colleges of Canada, which are summarized from information furnished by each of the institutions mentioned. Tables **12** and **17** give the dates of foundation, the affiliation, the faculties and degrees; Tables **13, 14** and **18,** the number of teaching staff and students, and Tables **16** and **19,** statistics of property, income and expenditure. For the 23 universities in Table **16** the total value of the endowments and property in land, buildings, equipment, etc., amounts to $59,282,456. For 22 of these universities the total income amounts to $6,737,816, of which $1,771,586 is derived from fees and the balance from investments, government grants and other sources. The total expenditure of the same universities amounts to $8,018,440. The total number of students attending the 23 universities of Canada in the academic year 1920-21, as shown by Table **16**, was 35,342. Adding to these the 20,486 students attending colleges having students doing work of university grade in the same year,and excluding 12,749 duplicates who are registered at both the universities and colleges, the grand total of students in attendance at Canadian institutions of higher education was 43,079.

TECHNICAL EDUCATION IN CANADA.

Technical Education in State Schools is a comparatively new institution. Until recently, vocational training was undertaken after the completion of or at the expense of academic education.

Among the first technical courses to be introduced into schools were commercial courses. Courses designed to fit pupils for business careers were introduced into the high school curricula of Ontario and Manitoba in 1899, of British Columbia in 1905, and Saskatchewan and Alberta about the same time, while the classical colleges of Quebec have long provided business courses and a school for higher commercial studies was founded at Montreal in 1907.

Agriculture was at first taught in colleges, which provided training for teachers who carried the subject into the schools. Apart from certain schools in Quebec and industrial schools having farms attached in other provinces, the study of agriculture in elementary and secondary day schools has hitherto been confined to school gardens and lessons on the science of agriculture.

Training in handicrafts was introduced into the school in the form of manual training for boys and domestic science for girls. The former was originally intended merely as a training in the use of tools, affording an agreeable diversion from the ordinary school work, and a means by which the boy could gain some idea of his mechanical capacities. A form of manual training was introduced into Ontario schools in 1883, and in 1891 into Nova Scotia, where it was made compulsory for teachers in training in 1893, and into the western provinces in the early years of this century. By 1915, manual training courses in Ontario had branched out into industrial, technical and art schools, and in that year a large Technical School was opened in Toronto. Evening technical classes, which were organized in nearly all the provinces in the first years of the century, carried out a scheme of actual vocational courses. Such courses were for some time given by certain day schools in Quebec. The idea of part time day vocational courses is new to Canada. The Adolescent Act passed in Ontario in 1919, makes part time attendance compulsory for adolescents from 14 to 18 years of age who have not attained matriculation standing or are not attending full time. By 1919, commercial, agricultural and domestic science courses were operating in all provinces and other technical courses in all but Prince Edward Island.

In 1919, the Dominion Parliament passed an Act offering assistance to the provinces in promoting technical education and a Director of Technical Education was appointed under the Minister of Labour. The provincial governments accepted the offer and a technical education officer has been appointed in all but two provinces. The benefits of the Act are extended to persons over 14 years who are not provided for by the ordinary day schools; the agreement also excludes agricultural studies, the training of nurses and teachers for ordinary schools and all work of university grade. The expenditure in1920-21 on technical education by local boards was about $2,064,563, by provincial governments $1,158,051 and by the federal government $585,469. Details of teaching staff and enrolment of students are given in Table **9** on page **147.** This table does not include all the pupils or students in technical schools or courses in the different provinces, but only those of such schools as come under the Act. Statistics of agricultural education, to which the Dominion contributes under the Agricultural Instruction Act, are given in the Agricultural section (see "Agricultural Instruction Act" in the index). Statistics of Indian education are given in the Administration section (see "Indians, school attendance of," in index).

The discrepancy between the total of pupils enrolled in Ontario from 1901 to 1916 and the number by sex for the same years is due to the inclusion of kindergarten pupils in the total. The number by sex of these kindergarten pupils is not available.

NOTE.—The totals for teachers in British Columbia from 1901 to 1909 are greater than the sum of the male and the female teachers because no information as to the sex of high school teachers is available. This discrepancy also appears in the Summary for Canada.

2.—Number of Schools, Teachers and Pupils in Canada, by Provinces, 1901-1921 or latest year reported—concluded.

NOTE.—From 1901 to 1905, inclusive, the Summary for Canada comprised the seven provinces of Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and British Columbia. The two provinces of Saskatchewan and Alberta were formed in 1905, and from 1906 all the nine provinces are included, with the exception of Manitoba for 1912, when no Education Report was issued by that province. The sex of the teachers in the Secondary schools of Saskatchewan is not given, and in Manitoba the sex of the pupils was not given for any of the years, while Ontario did not give the sex of its kindergarten pupils until 1917. In the Summary, therefore, these defects are indicated by printing certain items in italics. A general summary for 1921 for all elementary and secondary schools under public control is given in Table 1, pages 136-139.

3.—Teachers in Training in Nova Scotia, New Brunswick, Quebec, Ontario and Manitoba, 1901-1921, Saskatchewan and Alberta, 1906-1920.

[1]Previous to 1908 there were 55 County Model Schools in Ontario in addition to three Normal Schools and the Normal College. The function of these Model Schools was the training of third class teachers, while that of the Normal Schools was generally the training of second class and kindergarten teachers, and that of the College, the training of first class and secondary teachers. In 1908, most of the County Model Schools were abolished and the duty of training teachers for all the Public and Separate Schools except those in the districts and poorer sections of the province was placed upon the Normal Schools, which were increased in number from 3 to 7.

The Department of Education ceased to report the attendance at the Normal College after 1906. This college has been since known by various names. Recently, and up till 1920, its work was done by the Faculty of Education of the Universities of Toronto and Queen's and the figures for the Normal College given in the above table for 1918-19 and 1919-20 represent the enrolment in the Faculty of Education of these Universities. In 1920 their functions were transferred to the Ontario College of Education.

[2]Autumn Model Schools.

[3]In addition to these there were 13 extra mural students at Model Schools in 1921.

3.—Teachers in Training in Nova Scotia, New Brunswick, Quebec, Ontario and Manitoba, 1901-1921, Saskatchewan and Alberta, 1906-1920—concluded.

[1]These classes are designed principally for the purpose of giving teachers from the United Kingdom and United States a short period of training in the special requirements of the Alberta Department of Education. In 1918 a class was added for the purpose of enabling second class teachers to train for a higher professional certificate. The large enrolment in 1919 contained a number of students who desire special qualifications for teaching foreigners.

[2]The italics indicate partial totals. A third Normal School was opened in Edmonton in the latter half of 1921 with an enrolment of 116 students.

					1921	21	748	9,033	8,159

NOTE.—The Roman Catholic Classical Colleges are not included in Table 2 with the other public institutions for the reason that they are special institutions doing university, secondary and even elementary work. The following statistics of secondary schools in Ontario, Saskatchewan and British Columbia have been included in Table 2 and are repeated here mainly to show the differentiation between the sexes in the higher grades.

[1]Degrees conferred by the University of Toronto. [2]Succeeding Ontario School of Art founded in 1876. [3]The University of Toronto grants the degree Phm. B. [4]The degree of D.D.S. is conferred by the University of Toronto. [5]The degrees of B.V. Sc. and D.V.Sc. are conferred by the University of Toronto. [6]Degrees in Arts and Theology are conferred by the Western University. [7]The degree of B.A. is conferred by the University of Manitoba.

NOTE.—

In addition to the above colleges there are 21 classical colleges and 2 agricultural colleges in the province of Quebec. The classical colleges with the dates of their foundation are as follows: Chicoutimi (1873), Joliette (1846), L'Assomption (1832), Lévis (1853), Mont Laurier (1910), Montreal (Loyola) (1896), Montreal (Ste. Marie) (1848), Montreal (St. Sulpice) (1767), Nicolet (1803), Quebec Petit Séminaire (1663), Rigaud (1851), Rimouski (1855), St. Alexandre de la Gatineau (1911), Ste Anne de la Pocatière (1827), St. Hyacinthe (1811), St. Jean (1911), St. Laurent (1847), Ste. Thérèse (1825), Sherbrooke (1875), Trois Rivières (1860) and Valleyfield (1893). The two agricultural colleges are the Institut d'Oka and the agricultural school at Ste. Anne de la Pocatière. Of the 9,033 pupils in the classical colleges in 1921, 804 were in primary courses, 2,539 in commercial courses and 5,690 in classical courses. Of the last mentioned 650 were in colleges affiliated or annexed and 114 in colleges associated with Laval University. These were evidently doing work of university grade.

PUBLIC LIBRARIES IN CANADA.

Although in the early history of this country there are records of several libraries of varying types, it was not until the year 1800 that the first public library in Canada was founded at Niagara. During the first quarter of the 19th century libraries had their beginning in Quebec and Montreal and in Halifax and Yarmouth in Nova Scotia, while there is a record of a circulating library in Western Canada as early as 1824. Nearly all of these libraries have continued to exist in some form—either separately or in amalgamation—until the present time.

Ontario was the first province to make legislation for the benefit of libraries. In 1835 the Government of Upper Canada made grants to Mechanics' Institutes, which were really library associations. These grants were continued until 1857, then withdrawn until they were restored by the Ontario Government in 1868, in which year an Association of Mechanics' Institutes of Ontario was organized, continuing until 1886. During these years several acts were passed concerning these institutes, but the most important legislation was the Ontario Public Libraries Act of 1895, which changed the name of "Mechanics' Institute" to "Public Library." The revised Ontario Public Libraries Act of 1920 is chiefly important for the change made in grants and rate of taxation to be levied for library purposes. Both Saskatchewan and Alberta have Public Libraries Acts (passed respectively in 1906 and 1907) based, as is also the Free Libraries Act of Manitoba (passed in 1899), on the Ontario Act. The Free Libraries Act of British Columbia was passed in 1891. Quebec, in 1890 (2c.34) passed an Act to authorize city, town and village corporations to aid in the support of libraries. The Yukon Ordinance No. 20, 1903, provides for the management of free public libraries in Dawson City. There is no public library legislation in the Maritime provinces.

The Mechanics' Institutes of Upper and Lower Canada were modelled after that founded in England by Dr. Birkbeck. Their purpose was to provide lectures and study classes and a suitable reference library for labouring men and women. The early history of these institutes in Ontario shows that the use made of the libraries was small; but the provision in 1872 for inspection of these institutes, followed shortly afterwards by permission to include a larger range of literature in their libraries, helped materially in increasing the use made of the latter. The result of the Act of 1895 may be seen from the fact that, while in 1883 there was one public library, and in 1895 only 12, in 1896 there were 54, and in 1902 as many as 140 free libraries.

Travelling libraries commenced in 1890, when the Aberdeen Association was organized in Winnipeg with the purpose of distributing literature among the scattered settlers in the Canadian West. Branches of the association were gradually formed in various cities throughout the Dominion and one in England, while the headquarters were at Ottawa. A new work in travelling libraries was begun in 1897 among the sailors, under the auspices of the Upper Canada

Tract Society. In the following year the Government of British Columbia began work among the mining camps and agricultural districts. This work has grown steadily. In 1900 work was commenced with travelling libraries contributed by the Canadian Club of Toronto and by McGill and Queen's universities. In the next year the Canadian Reading Camp Association was formed, and by this Association the Frontier College was established with the aim of placing a reading room or tent in every frontier camp in Canada. This College was incorporated by a Dominion Act of 1922 and receives a grant through the Ontario Department of Education. In addition McGill University has an excellent system of travelling libraries, as has also the University of Alberta; while in Ontario and Saskatchewan similar work is carried on under government auspices. In Nova Scotia the Women's Institutes, through the Provincial Department of Agriculture, have made considerable use of the McGill libraries.

The Ontario Library Association, the first library association in Canada, was organized in 1901, while British Columbia formed an Association in 1911, Saskatchewan in 1914, the Maritimes, for the three maritime provinces, in 1918, and Alberta in 1920. The Pacific Northwest Association, organized in 1909, has an international membership.

There are two library schools in Canada: one connected with McGill University, founded in 1905, and one held in Toronto by the Ontario Department of Education since 1910. The course at McGill has always been a short summer course, lasting one month. The Ontario school has been of varying lengths: one month, 6 weeks, 2 months, and, since 1919, 3 months.

Up to the year 1919 the amount of $3,032,910 had been promised by the trusts established by Andrew Carnegie in 146 grants for the erection of 155 library buildings. Of these buildings 114 had been erected at an expenditure of $2,393,410.

VII.—CLIMATE AND METEOROLOGY.

THE CLIMATE OF CANADA SINCE CONFEDERATION.

By Sir Frederic Stupart, Director, Dominion Meteorological Service, Toronto.

It has been proved by geologists that in geological time the climate of the world has undergone great changes, and many historians and archaeologists have in recent years carried on investigations as to whether in historical times there has been any appreciable change in the climates of the countries for which exist either written records or evidences provided by the remains of man's handiwork.

Some, for instance, are of the opinion that there are evidences of increasing desiccation in Asia and southern Europe, while in the western hemisphere, in Central America and adjacent territories, the disappearance of a by-gone civilization has been explained as resulting from a change of climate which has rendered uninhabitable a land obviously once well suited to man's best desires.

It has, however, been found that there are many conflicting data, and as the question stands to-day the general consensus of opinion is that while there have been pulsations of both long and short periods during which departures from averages have been quite pronounced, both as regards temperature and precipitation, yet there have not been appreciable progressive changes in either direction.

In view of these facts, we may be fairly sure that in the seasons in Canada of the more than fifty years since Confederation there have been variations such as have occurred down through the centuries and will occur in the future, but we need not expect to find any marked, climatic change. There is, however, one factor which may have to some extent affected the climate of eastern Canada. That is deforestation, and yet, be it said in a somewhat guarded manner, the records that we possess do not indicate that this factor is as important as it was once thought to be.

Temperature.—On an inspection of the charts showing the curves of winter temperature for the different parts of Canada during the past 50 years, the most obvious fact is that the variations from average are largest in the western provinces and that they diminish gradually eastward toward the Atlantic coast. At Edmonton the mean temperature of the winter of 1887 was −4°, while that of 1889 was 22°; the lowest winter monthly average, −14°, occurred in January, 1886, and the highest winter monthly, 22°, occurred in both January and February, 1889. Winnipeg shows even a greater range, with a mean winter temperature of −9° in 1887, and a mean of 19° in 1878. The lowest monthly mean was −16° in January, 1883, and the highest 23° in February, 1878.

At Toronto the coldest winters were those of 1875 and 1904 with a mean of 17°, followed closely by 1885 and 1918 with a mean of 18°. The warmest winter was 1890 with a mean of 31° and the next warmest 1919 with a mean of 30° and 1921 with a mean of 29°, which give a difference of 14° between the warmest and the coldest winters. The coldest monthly mean recorded was 10·2° in February, 1875, the warmest January mean was 33° in 1880 and the warmest February was 30° in 1882.

At Montreal the coldest winter means were 10° in 1875, 1904 and 1905 and the warmest 21° in 1878 and 1892; the coldest January was 4° in 1888 and also in 1893, and the warmest 22° in both 1880 and 1913. The coldest February was 6° in 1885 and the warmest 27° in 1877.

In Nova Scotia, as represented by Halifax, the coldest winters were those of 1868 and 1905, with mean temperatures of 18°, and the warmest were those of 1870 and 1889, each with a mean temperature of 28°. The coldest January was that of 1920 with a temperature of 14°, and the coldest Februaries were those of 1868, 1875, 1904, 1905 ,1911 and 1914, each with a mean of 18°.

The lowest temperatures on record at various stations in Canada are as follows:—Fort Good Hope, Mackenzie river, −79°; Fort

Vermilion −78°; Edmonton −57°; Prince Albert −70°; Winnipeg −53°; White River, Ontario, −60°; Toronto −26°; Ottawa −32°; Montreal −28°; Quebec −34°; Halifax −17°.

The record of 50 years at Winnipeg presents some very interesting facts. In the first 25 years there were but seven winters with a mean temperature higher than the mean of the whole period, while in the last 25 years there were but five winters with a mean below that of the whole period. This seems to indicate that the winter climate of the West is becoming milder, but it is a significant fact that the much longer record at St. Paul, Minn., indicates that the thirties and forties of the last century were comparatively mild in the West, hence there is suspicion of a long period weather cycle.

In Ontario, as represented by Toronto, the temperature curve of 51 years shows somewhat the same characteristics as that of Winnipeg, with more winters below average in the first half than in the second. In the Toronto record going back to 1831, there is, however, confirmation of the fact indicated by St. Paul that a long period beginning in the fifties and ending about 1888, during which the majority of the winters were abnormally cold, had been preceded by a period of about 20 years during which, while some few winters were very cold, most were comparatively mild. The decade 1841-1850 had, on the average, the mildest winters in the whole period 1831-1921.

It is obvious, therefore, that it would be unwise to form any definite conclusions regarding climatic changes on a record of even fifty years, as there are manifest evidences of pulsations of a longer period.

Since the Toronto record is much the longest, it is the most instructive we possess, and the following are some of the most noticeable features regarding the winters in Ontario. In the 1840-1850 period there were eight winters above normal temperature. The next twenty years contained more winters below than above but no very wide extremes. Then followed from 1873 to 1883 a period during which the winters alternated between cold and mild, while the six consecutive winters 1883-88 were all cold. The next four winters were mild and then from 1894 to 1903 there were ten successive winters of almost average temperature. The winters of 1904 and 1905 were very cold and then followed eleven years above average, with but two exceptions. The winter of 1918 was extremely cold, 1919 very mild, 1920 very cold, and the past two winters exceptionally mild.

The general form of the temperature curves of Montreal and Halifax are very similar to those of western stations, but they do not give evidence of quite as marked a tendency towards a preponderance of milder winters in the last quarter century. At Montreal the mean temperature of the last decade was 1° below the mean of the whole period, while the mean of the first decade was 1° above. At Halifax the mean of the last decade was a fraction of a degree higher than that of the first decade.

While, as we have seen, the winters vary very considerably in severity, yet as the spring advances departures from a normal value diminish, and the summer season throughout the Dominion is subject to relatively small variations. There are differences, however, and in Alberta the summers of the eighties, exclusive of 1881, 1886 and 1889, were distinctly cooler than any term of years since then, while the summers of 1894, 1896, 1898 and 1906 were especially marked by higher temperature. In nearly all other years the mean of the season differed very little from the normal derived from the whole period.

The general character of the summers as regards temperature has been much the same in Manitoba as in the provinces farther west. In the seventies they were warm, while in the eighties they were cool, especially in 1883 and 1885. The nineties were also cool, except '90, '93 and '94, but since 1900 warm summers have predominated with marked exceptions, however, in 1904 and 1905 and again in 1915.

From Ontario eastward the year 1869 had the coolest summer in 52 years, and after that the coolest summers occurred from 1882 to 1891, exclusive of 1887, and in 1902-3-4. A decade of warm summers commenced in 1892 and then since 1905 warm summers have predominated, but 1912-15 and '17 were comparatively cool. The spell of greatest heat ever recorded in Ontario occurred in the first week of July, 1911, when temperatures above 100° were registered on several consecutive days in the peninsula of Ontario. The summer of 1921, was the warmest on record and July was the warmest month.

There is some evidence of a tendency towards a somewhat higher mean temperature in both summer and autumn months in Ontario, a tendency which is more doubtful in the other provinces. In the early days of settlement in Ontario summer frosts were not uncommon but have since become quite rare. It would appear reasonable to suppose that deforestation of the country east of the Mississippi must lead to greater insolation in the northern United States and this would affect Ontario more than the other provinces.

The dates and severity of late spring and early autumn frosts in the western provinces are not quite conclusive, but the general inference from the longer records combined with those of short period, is that there has been no appreciable change since the early days of settlement.

Precipitation.—Fifty years of meteorological records afford no ground for belief that the precipitation of the Dominion has changed with the gradual deforestation and the general activities of man in covering the country with a network of railways and wires carrying electrical currents. Variations of a character which suggest cycles, probably due to cosmical causes, are, however, quite apparent, but at the same time perplexing, and it may be assumed with a high degree of probability that there has been no permanent progressive change in either rainfall or snow.

The Winnipeg records and also records from a shorter term of years in the West indicate that the eighties included more dry summers

than in any subsequent corresponding period, while the Alberta records show a remarkable period of about six wet summers from 1899 to 1904 and again from 1911 to 1915.

While 1878 was the year of greatest precipitation in Ontario, and also the summer of greatest rainfall, the seventies as a whole had dry summers. In the eighties the summers of '80 and '83 and '85 were wet and others about normal, excepting '87 which was very dry. In the nineties the summers of '95, '96, '98 and '99 were particularly dry, while the other years had an ample but not excessive rainfall. Since 1900 the summers of 1907, 1911 and 1913 were exceptionally dry, while others were nearly normal. At Montreal the year immediately succeeding Confederation and 1915 were the years of least precipitation, and 1869, 1885 and 1900 were the years of greatest precipitation. The decade commencing 1870 was that of least precipitation and that commencing 1900 of greatest. Here again we have no indication of progressive change.

The records of precipitation made at Halifax since 1868 show no evidence of progressive change during the fifty-four years which have elapsed. During the first decade the average annual precipitation was 54 inches, during the second 58 inches, the third 57, the fourth 58, the fifth 54 inches. The wettest years were 1884, 1888, 1896, 1907, 1908, 1910, with total precipitation respectively as follows: 64, 67, 70, 64, 65, 68 inches. The driest years were 1868, 1879, 1889, 1894, 1905, 1914, 1916, the respective totals being 50, 48, 47, 45, 48, 48, 46 inches. In the first decade the greatest annual snowfall was 125 inches and the least 29 inches. In the second decade these figures became respectively 134 inches and 32 inches; in the third 108 and $50\frac{1}{2}$ inches, in the fourth 108 and 55, and in the fifth 101 and 38. In January, 1894, 56 inches of snow fell and in October, 1896, 15 inches of rain were recorded on a total of 20 days.

In the seventies and early eighties there were many more years with heavy snowfalls in March in Ontario and Quebec than have occurred in any period of equal length since then. The result was to make the annual average snowfall for that period considerably higher than the normal, although the annual total precipitation in years with a snowy March was frequently below normal. Lack of observations for this period in the western provinces, except at Winnipeg, leaves us restricted to a consideration of the years since 1883. The most remarkable feature of the western snowfalls was the change from light to heavy snowfalls which occurred in the nineties. If we consider the decades 1885-1894, 1895-1904, 1905-1914, and form the average annual totals of snowfall for these, we find at Medicine Hat, 29 inches in the first decade, 45 inches in the second, 24 inches in the third. At Edmonton the figures are respectively, 36, 52, 39 inches; at Calgary 37, 51 and 42; at Qu'Appelle, 45, 70 and 51. At Winnipeg, however, the sequence is different, the respective decadal averages running 52, $43\frac{1}{2}$, $50\frac{1}{2}$. At Prince Albert the first of these decades is missing, but the second two have averages of $58\frac{1}{2}$ and $48\frac{1}{2}$ which sufficiently resemble the other records, as do also the figures for these two decades at Battleford, viz. 35 and 24.

VIII.—PRODUCTION.

In this section are included the statistics of agriculture, the fur trade, forestry, fisheries, minerals, manufactures and water powers. A sketch of the development of each of these branches of production is prefixed to the statistical tables.

THE DEVELOPMENT OF AGRICULTURE IN CANADA.

By J. H. Grisdale, D. Sc. A., Deputy Minister of Agriculture, Ottawa.

Agriculture in Canada dates back to prehistoric times. When Cartier sailed up the St. Lawrence in 1535 he found fields of maize growing around the Indian village of Hochelaga at the foot of Mount Royal where Montreal now stands. Later travellers reported similar fields in many parts of what is now Ontario. More especially the Huron Indians, who occupied the territory around Georgian Bay and Lake Huron, and were not as warlike as the other tribes, cleared large patches of land and grew corn, peas, beans, and other crops.

The Beginnings in Acadia and Quebec.—In the whole area now constituting Canada, the first settlement, and at the same time the first effort at agricultural production made by white men was most probably that begun at Port Royal, now Annapolis, Nova Scotia, by the French under de Monts in 1605. Here some of the settlers cultivated patches of land and grew maize, pumpkins and beans, while cows were brought here by Poutrincourt in 1606. The Indians also grew maize to a small extent to supplement food obtained by hunting. According to the census of 1671, the Acadians, then numbering 441, had 429 arpents under cultivation, together with 866 cattle, 407 sheep and 36 goats. Thereafter the settlers continued to clear the lands and reclaim the fertile marshes from the sea, chiefly along the Basin of Minas, on which hay grew abundantly.

In the valley of the St. Lawrence farming on a small scale appears to have been carried on by Champlain, the founder of Quebec, as early as 1608, when cattle were imported and hay and fodder grown, together with wheat and other grains. In 1626, Champlain established a farm at Cap Tourmente for cattle which he sent from Quebec.

The first real farmer, however, was Louis Hébert, who landed in Quebec in 1617 and immediately began to clear and cultivate the soil on what is now part of Upper Town, Quebec. His only tool was a spade, but he worked away till the soil was ready to receive the seed and also planted some apple trees. Hébert was followed by other farmers, among them Guillaume Couillard, Abraham Martin and Robert Giffard, the latter of whom was said to have had in 1635 large crops of wheat, peas and Indian corn. In the district of Three Rivers, Pierre Boucher had large crops of grains and vegetables, and in 1648, Pierre Gadbois and others commenced farming on land where Montreal now stands.

The land was held under seigneurial or feudal tenure, similar to that prevailing in old France, a system which seems to have promoted the development of agriculture. Many former hunters and traders settled down as cultivators of the soil, and came to be known as "habitants."

In 1667 there were 11,448 arpents of land under cultivation, while the farmers owned 3,107 cattle and 85 sheep. More live stock of all kinds was gradually brought into the country. A census of 1721 gives the following statistics: arpents under cultivation, 62,145; in pasture, 12,203; grain harvested—wheat, 282,700 bushels; barley, 4,585 bushels; oats, 64,035 bushels; peas, 57,400 bushels; corn, 7,205 bushels; flax, 54,650 lbs.; hemp, 2,100 lbs.; tobacco, 48,038 lbs. There were at this time 5,603 horses, 23,288 cattle, 13,823 sheep and 16,250 swine in the colony.

Quebec.—During two centuries and a half the habitant varied his system of farming very little. When the land was cleared of trees, wheat and oats were sown among the stumps. Two crops of this nature were harvested and then hay and other grasses were grown for several years. When the stumps were sufficiently rotten, the land was ploughed. Half the land was ploughed in three consecutive years and seeded to cereals and roots; the other half was kept for the production of hay as pasture for live stock. This was changed around during the next three years, and so on. The quantity of live stock kept was small compared with the area of the farm. This was not a very scientific system, but the soil was so rich that the crops of grain, roots and hay were always plentiful, so much so that flour, wheat and peas were being exported in 1749. Butter and cheese were always made, while maple sugar has been one of the regular products since 1690 and potatoes were first grown in 1758.

The period following the English conquest of Quebec, 1760 to 1850, was a critical one for agriculture, the governing classes being too much engrossed in politics to pay much attention to it. However, the settlement of the Eastern Townships was begun in 1774 by the United Empire Loyalists, who brought their cattle with them. These settlers were granted lands which were held under the tenure known as "free and common soccage." These settlements made good progress and were reinforced later on by French-Canadians from the seigneuries.

From a very early period numerous efforts have been made to develop the agriculture of the country by agricultural education or training, by the organization of associations and by the establishment of agricultural schools and colleges. As early as 1668, Monseigneur de Laval opened an industrial school where agriculture was taught at St. Joachim, near Quebec, and in 1789 a society which published pamphlets on agriculture was founded by Lord Dorchester. Later, various books and pamphlets on agriculture were published and agricultural newspapers begun. In 1847 the Canadian legislature passed an Act authorizing the formation of agricultural societies and granting them subventions to be used for prizes at fairs and for

the importation of live stock and seed. In 1852 a law was passed creating the Department of Agriculture, the Board of Agriculture and authorizing the establishment of schools of agriculture and model farms. The first agricultural school in Canada was opened in 1859 at Ste. Anne de la Pocatière, while the Oka Agricultural Institute was opened in 1890 and Macdonald College in 1908.

Nova Scotia.—While the territory which is now Nova Scotia became a British possession by the Treaty of Utrecht in 1713, the first English-speaking settlement was made in Halifax in 1749, but for military rather than economic purposes. However, between 1751 and 1753 about 1,615 German and Swiss immigrants had settled in what is now the county of Lunenburg. Further, after the expulsion of the Acadians from Port Royal in 1755, a considerable number of New Englanders had settled in the Annapolis Valley. As early as 1762, 14,340 acres were under cultivation producing hay, grain and potatoes and supporting some live stock. In 1783, after the Peace of Paris, many United Empire Loyalists came to Nova Scotia, bringing their live stock with them. They received from the British Government grants of land, agricultural implements and seed corn.

In the Maritime Provinces generally, the farmers were unprogressive and farming was at a rather low ebb when, in 1818, a series of letters published in the Acadian Recorder under the signature of "Agricola," attracted public attention. These letters dealt with all phases of the industry. The people were awakened from their lethargy and the outcome was the formation at the end of 1818 of the Central Agricultural Society of which "Agricola", now found to be John Young, a Scotsman who had come to Nova Scotia a few years previously, became secretary. Twenty-five other agricultural societies were organized within the next two years. Yearly exhibitions were held, improved stock and seed were distributed and conditions improved generally. The agricultural societies were in 1864 put under the control of a Board of Agriculture, and in 1884 under the office of the Secretary for Agriculture.

In 1885 a Chair of Agriculture was established in connection with the Provincial Normal School, and in 1888 the Nova Scotia School of Agriculture was established. In 1893 a School of Horticulture was established at Wolfville and in 1905 the two schools were united as the College of Agriculture at Truro.

Prince Edward Island.—The first record of settlement in Prince Edward Island or St. John Island, as it was then called, was in 1713, when some families of Acadians migrated to its shores, bringing a few cattle with them. In 1763 the island was ceded to Great Britain, divided, and granted to persons who had claims on the ground of military service, but practically no attempt was made to cultivate the land. However, farming received a slight impetus on the arrival in 1783 of the United Empire Loyalists, who brought their cattle with them and began to cultivate the land. The country was undulating and the soil a bright red loam very suitable for the growing of cereal crops and potatoes. Rich deposits of mussel mud were found,

which were used as fertilizer with good results. Soon Prince Edward Island oats and potatoes were listed on the markets of the Maritime Provinces.

The agitation in Nova Scotia, caused by the publication of the letters of "Agricola", spread to Prince Edward Island, and in 1827 agricultural societies were formed and exhibitions held. Better methods of farming were adopted and attention was given to horse raising and later to swine and poultry. The first Royal Agricultural Society was organized in 1845, receiving an annual grant of £100 from the government; various branches were established at different places. The Provincial Exhibition, established in 1900, is held annually at Charlottetown, while annual seed fairs also take place.

New Brunswick.—As early as 1605 French adventurers ascending the St. John river, noticed fields of Indian corn on the flats along its shores, but the first settlement was made by some fifty Acadians with a few cattle near that river in 1693. When Acadia was ceded to Great Britain in 1713, others moved north from the peninsula of Nova Scotia into New Brunswick, settled in the valleys and devoted themselves to growing corn and hay. The land was very fertile and produced abundant crops.

About 1762 a number of Massachusetts colonists formed a settlement at a place now called Maugerville; others took the alluvial lands between there and the Jemseg River. In 1784, when a large part of the land belonging to the Acadians was seized by the British and given to the United Empire Loyalists, the Acadians moved to the northern part of the Province and founded the flourishing settlement of Madawaska. The rich soil along the St. John river, when only cleared of the trees and harrowed, produced 20 bushels of corn and 20 bushels of wheat per acre and when properly worked gave much better yields. In 1788 seventy acres of land were sold for £42 3s. 6d., but in the early years of the nineteenth century, land rose rapidly in value. Large quantities of hay, roots and vegetables of all kinds, as well as beef and mutton, were marketed at St. John.

The period between 1840 and 1845 was a prosperous one for farming in New Brunswick; the crops were abundant, much land was brought into cultivation and the people were contented. However, at the close of this period there was a great change, brought about by various causes. Farming conditions were such that few cared to embark in this industry and in 1849 James F. W. Johnston of Great Britain was asked to investigate the agricultural situation. His report was most favourable. Many fine farms of 100 to 200 acres of cleared land were found throughout the province, yielding large crops of grain, potatoes, etc. Average yields in the county of Northumberland, in 1850, per acre, were—wheat, 17 bushels; oats, 32 bushels; maize, 50 bushels; barley, 32 bushels; turnips, 350 bushels; potatoes, 200 bushels; hay, 2 tons. Three crops were grown without manure and sometimes as many as eight. Land was valued at from £3 to £15 per acre. Mr. Johnston suggested ways and means for developing the industry which proved beneficial in later years. On

his advice a New Brunswick Agricultural Society was founded in 1851. Its work was taken over by a provincial board of agriculture in 1855, which in turn was replaced by a central provincial farmers' association in 1876. The portfolio of Commissioner of Agriculture was created in 1898.

The first Agricultural Society in New Brunswick was organized in St. John, N.B., in 1790. Soon others were established throughout the Province. Better agricultural methods were introduced and conditions improved. In 1825 the Board of Agriculture made the first importation into Canada of pure-bred shorthorns, thus laying the foundation for the fine stock found in the County of Westmoreland and other sections.

Ontario.—Agriculture in Ontario may be said to have been begun in 1671, when Frontenac founded the first settlement near Kingston. He was granted a vast territory on the understanding that he would foster agriculture and stock raising, but little agricultural work was actually done, as all of the settlers' time was taken up in warring with the Indians. In 1701, a small settlement on the Detroit River was started by La Motte Cadillac, who is said to have brought some cows with him.

The first English-speaking agricultural settlement was not commenced until 1783, when the United Empire Loyalists arrived from the United States. They settled principally around Niagara, York, Western Ontario and the Bay of Quinte, the settlements along the Bay of Quinte and the St. Lawrence River being among the most populous. Townships were surveyed and grants of land given. As these exiled settlers were very poor owing to the confiscation of their property, they had to be provided with rations, clothes, implements, seed grain, etc. A cow was allotted to every two families and other articles divided among them. The implements supplied them were very crude, but by combining their efforts they were able to clear open spaces in the forests, build rude huts and sow the seed among the stumps. The crops of wheat, corn, etc., grown on this virgin soil gave excellent yields for the first three years, but the crop of 1788 was a failure. During these years, flour mills were built at Cataraqui River, Napanee, Matilda, Niagara Falls, Fort Erie and Grand River. The pioneers had many hardships to contend with, not the least being the depredations of the Indians and wild beasts. Later, during the Crimean war, the price of wheat rose from 30 cents to $2 per bushel, which, followed by the high prices obtaining during the American Civil War, gave many of the farmers their first real start, enabling them to bring in cattle, horses and sheep from Lower Canada and the United States.

The building of roads, under an Act of 1793, opened up the country, and soon grain, especially corn, was being exported. Cheese and butter were made, and a market was opened at Kingston in 1801. Wheat was the leading cereal produced, the valley of the Thames being noted for the quantity and quality of its wheat. After the war of 1812, grants of 100 acres with provisions and implements

were made to the soldiers. Legislation was passed to encourage the growing of hemp, but little success was obtained in the handling of this crop. According to the census of 1817, the Midland districts of Ontario contained 3,600 horses, 100 oxen, 6,185 cows and 1,654 young cattle.

From a comparatively early period local agricultural societies have been a feature of agriculture in Ontario, some half dozen such societies being organized between 1820 and 1830, in which year the legislature of Upper Canada provided a grant of £100 for a society in each district on condition that the members of the society subscribed and paid in at least £50. In the period from 1830 to 1845 pure-bred cattle were imported, and the foundations of the live stock industry laid. In 1846 were organized the Provincial Agricultural Association and Board of Agriculture for Canada West, and the first provincial exhibition was held in Toronto in that year, followed by annual exhibitions in other cities. These exhibitions promoted the wider use of the labour-saving agricultural machinery which was now being manufactured. In 1859 the Ontario Fruit-Growers' Association was established at Hamilton and in 1862 a veterinary college (now the Ontario Veterinary College) was established in Toronto, while the Ontario Agricultural College was founded at Guelph in 1874.

In 1880 the Ontario Agricultural Commission was appointed to inquire into the agricultural resources of the Province of Ontario, the progress and condition of agriculture, and other related matters. As a result of its report, the Ontario Bureau of Industries was formed in 1882, for the collection and publication of statistics of agriculture and allied industries. Finally, a Department of Agriculture was created in 1888, the activities of which have steadily increased down to the present time.

Manitoba.—The earliest attempts at cultivation in Manitoba and the West date from the arrival of the Selkirk settlers at the Red River in 1812. The twenty-two men who composed the settlement immediately commenced to break the land, which was sown with winter wheat. The wheat crops of 1813 and 1814 were complete failures owing both to lack of knowledge and to the only implement available for breaking the sod being the hoe. The yield of potatoes and turnips was, however, good, and the crop of 1815 was a success.

During the first few years of the settlement, there was great rivalry between the North-West Company and the Hudson's Bay Company, which ended in bloodshed in 1816. Many of the settlers were killed and the remainder fled up Lake Winnipeg to Jack River. Early in 1817 a relief force was sent by Lord Selkirk, Fort Douglas was recaptured and the settlers were persuaded to return and resume farming. Misfortune, however, seemed to follow the efforts of this colony, its crops being wiped out by grasshoppers in 1818 and 1819. As the supply of seed was exhausted, some of the settlers went south to Wisconsin and, after much hard labour, returned with 250 bushels of seed. Small crops followed and the people were only saved from suffering and want by the generosity of Lord Selkirk.

In 1822, the population was 681; the numbers of live stock were—cattle, 48; calves, 39; oxen, 6; sheep, 10; pigs, 12; horses, 78. The quantities of seed sown: wheat, 235 bushels; barley, 142; Indian corn, 12; potatoes, 570. The first satisfactory crop of grain was reaped in 1824, wheat yielding 44 bushels from the plow and 68 bushels after the hoe. It was gathered with the sickle and threshed with the flail. The crops varied during succeeding years, but by 1830 the colony was in a flourishing condition.

For more than half a century, however, Manitoba remained an isolated community, the first railway reaching St. Boniface, opposite Winnipeg, only in 1878, and the Canadian Pacific shortly afterwards. The farmers of Manitoba thus secured a market for surplus products and agriculture flourished apace. While the production of such hardy varieties of wheat as Red Fife and Marquis has added greatly to the area in which wheat can profitably be grown, recent years have seen a great increase in mixed farming. The Manitoba Agricultural College was founded in 1903.

Saskatchewan.—In what is now Saskatchewan the Hudson's Bay Company had in the early days trading-posts at Carlton, Prince Albert and Battleford; about these posts the settlers grew vegetables, barley, oats and wheat. Two flour mills were erected, but the market for the flour was purely local. In the seventies the Indians were placed on reserves, taught agricultural methods and given horses and cattle, many of them making good progress.

About 1882, settlers from Eastern Canada and the British Isles began to settle in the eastern part of what is now the province of Saskatchewan while the building of the Canadian Pacific Railway brought in more settlers in 1883. These new settlers knew little about producing crops under semi-arid conditions, and the soil and climatic conditions of the country formed problems which were hard to solve. They kept a little stock, a few cows, hens and pigs, worked hard and, on the whole, were blessed with good crops.

The Riel Rebellion in 1885 interfered considerably with farming operations. Many of the farmers hired their horses to the Government for transporting supplies, and were thus unable to work their land. A few farmers, after finishing seeding, ploughed the land in June and July and kept working it in order to check the weeds. The next year was dry and although most crops failed these farmers had over 23 bushels to the acre on their summer-fallowed land. The problem of conserving the moisture in the soil was solved, and the principle of summer-fallow remains the best for successful crop growing. The establishment of the Experimental Farm at Indian Head, in 1888, assisted greatly in the proper development of agriculture in the province.

While the majority were engaged in growing wheat, a number of the earliest settlers chose the raising of live stock as their work. Horse and cattle ranches were established in the Qu'Appelle Valley, Moose Mountain, Cypress Hills, etc., and sheep ranches around

Swift Current, Maple Creek, etc. The excellent pastures and the abundant supply of water made the country especially adapted to stock raising. With the increase in population and the development of the grain-growing industry, the rancher has been obliged to seek the rougher parts of the province for his ranges. A large number of the farmers are now devoting themselves to mixed farming, which appears to be gaining in popularity, especially in the older districts.

Alberta.—In what is now the province of Alberta agriculture was carried on in a small way as early as 1809 at the trading posts of the Hudson's Bay Company, where wonderful crops of vegetables and field crops were grown. In the seventies cattle were brought in from Montana to the Macleod district, becoming the nucleus of the great Alberta ranches.

Alberta is divided into three sections, the Peace River, central and southern. The Peace River or northern section was first settled by the Hudson's Bay Company, which later at its various forts and mission stations grew potatoes, beets and all sorts of garden truck. The soil is a rich dark loam, well supplied with the plant foods most needed and the wheat produced is of the best quality. Very many varieties of grasses abound and these make excellent pasture, the chinook making this grass available throughout the year. The central section is more of a mixed farming country. In this section most of the dairy and live stock enterprises of the province are found. All sorts of grain crops do well. The southern part of the province was originally a ranching country for cattle, horses and sheep. This has been considerably changed through the introduction of irrigation enterprises, a great diversity of crops such as grains, forage and roots being grown, and the yields are exceptionally large. A large quantity of grain hay is grown. The whole province is being turned into a mixed farming country, and while the large horse-and-cattle ranges are gradually disappearing, the farmers of the present day are raising a better class of stock.

British Columbia.—Daniel Williams Harmon was the first farmer in British Columbia, settling in the Fraser Lake district. Entries in his diary show that in 1811, 1815 and other years, he planted potatoes, vegetables and barley and that the yields were large, one bushel of potatoes producing forty-one, and five quarts of barley sown yielding five bushels. For many years fine crops were grown in this district and at the posts of the Hudson's Bay Company, which, together with the North-West Company, was the pioneer in agriculture in British Columbia. In 1837 the Hudson's Bay Company had a large farm near Fort Vancouver, producing grain, vegetables and other crops and carrying all kinds of live stock. They had large farms at Nisqually and Cowlitz and smaller ones on Vancouver island, Dr. John McLoughlin being one of the great promoters of agriculture. With the gold rush to the Cariboo in the 50's, and the springing up of mining camps. an impetus was given to farming in order to supply produce to these camps. This was the beginning of stock raising in the valleys of the

Thompson and Nicola. Later many of the miners turned to farming and stock raising.

In what is now British Columbia agricultural societies were formed and exhibitions held at a very early date in the history of the colony. The first agricultural association was formed at Victoria in 1861 and its first exhibition was held in the same year, while on the mainland the first exhibition was held at New Westminster in 1867. Later, under the provisions of the Farmers' Institutes and Co-operation Act of 1897, a number of Farmers' Institutes were formed, with a Farmers' Central Institute having annual meetings.

AGRICULTURE.

Field Crops, 1916-21.—In Table 1 are presented for Canada, by provinces, estimates of the area, yield, quality and value of the principal field crops for each of the six years 1916 to 1921, with the five-year averages for the period 1916 to 1920. The estimates of 1921 are based upon statistics collected from about 160,000 farmers throughout Canada in June of that year under arrangements made between the Dominion and Provincial Governments in accordance with plans dating from 1917 for the four provinces of Quebec, Saskatchewan, Alberta and British Columbia, and from 1918 for the remaining five provinces of Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Manitoba. As was pointed out in previous editions of the Year Book (see 1920 edition, p. 188), comparability with the statistics of 1917 and 1918 was somewhat affected by the change in the method of estimation which then took place. In preparing the estimates of totals for the year 1921, partial use was made of preliminary census data showing the total number of farms in Canada. The effect was to increase considerably the areas estimated to be sown to wheat in 1921, as compared with the final estimate of 1920, the difference being partly due to actual increase and partly to correction by use of the census data[1]. The estimates for 1920 and 1921 are subject to final revision according to the results of the census of 1921, when available.

Season of 1920-21.—The winter of 1920-21 proved to be exceptionally mild, as a consequence of which the loss of potatoes through freezing and rotting in cellars was reduced to a minimum. The percentage of fall-sown wheat that was winter-killed was, however, higher than in either of the two previous seasons when the winters were more severe, the proportions for all Canada being 10 p.c. in 1921 as against 4 p.c. in 1920 and 5 p.c. in 1919. The summer of 1921 will be remembered for the extraordinary and prolonged drought, which prevailed in most countries of the northern hemisphere. Notwithstanding this, however, Great Britain and France produced excellent wheat crops, with average yields per acre the highest on record in both countries. In Canada the wheat crop on the whole proved fair, although the yield per acre for the Dominion was less than

[1]For more detailed explanation, see Monthly Bulletin of Agricultural Statistics for November, 1921 (Vol. 14, No. 159, p. 431).

in 1920 and was below the decennial average. Threatened disaster, due to the prevailing drought, was averted by heavy rains which fell over most of the province of Saskatchewan in June, giving abundant moisture when most needed. In September, when fine weather is usual, heavy rains in the same province, whilst the grain was in stook, delayed threshing and lowered both yield and grade; but the average turned out to be superior to that of 1920 by 2½ bushels per acre and the total yield of wheat for Saskatchewan, as finally estimated, was 188 million bushels, as compared with 113,135,000 bushels in 1920, and it is the highest total for Saskatchewan since 1915. In most of the provinces the grain yield was seriously affected by the drought, whilst the average yield per acre of hay and clover for Canada, only slightly over one ton, was the lowest on record. As usual during a hot season, corn proved exceptionally fine, and wherever ensilage is practised farmers were able to fill their silos with fodder corn, which compensated largely for the scarcity of hay. Fortunately the drought was broken during September in time for the rains to prove of some benefit to late potatoes, to root crops and to pastures upon which, owing to the absence of frost, cattle were able to graze up to a later date than usual.

Areas and Yields of Grain Crops.—The total yield of wheat in Canada for the year 1921 was finally estimated at 300,858,100 bushels from a sown area of 23,261,224 acres, as compared with 263,189,300 bushels from 18,232,374 acres in 1920 and with 228,409,780 bushels from 16,967,561 acres, the annual average for the five years 1916-20. The total for 1921 consisted of 15,520,200 bushels from 720,635 harvested acres of fall wheat and of 285,337,900 bushels from 22,540,589 sown acres of spring wheat. The average yield per acre for all wheat in Canada was 13 bushels for 1921, as against 14½ bushels in 1920 and 13½ bushels, the five-year average. The average yield per acre for fall wheat in 1921 was 21½ bushels and of spring wheat 12¾ bushels. For oats, the finally estimated total yield in 1921 was 426,232,900 bushels from 16,949,029 acres, as compared with 530,709,700 bushels from 15,849,928 acres in 1920 and with 432,926,000 bushels from 13,980,453 acres, the five-year average. The average yield per acre was 25¼ bushels in 1921, as against 33½ bushels in 1920 and 31 bushels, the five-year average. Barley yielded a total of 59,709,100 bushels from 2,795,665 acres, as compared with 63,310,550 bushels from 2,551,919 acres in 1920 and with 58,962,988 bushels from 2,509,267 acres, the five-year average. The average yields per acre were 21¼ bushels in 1921, 24¾ bushels in 1920 and 23½ bushels the five-year average. Flaxseed gave a total yield of 4,111,800 bushels from 533,147 acres, as compared with 7,997,700 bushels from 1,428,164 acres in 1920 and with 6,744,080 bushels from 1,033,336 acres, the five-year average. The yield per acre was 7¾ bushels, as compared with 5·60 bushels in 1920, and with 6·55 bushels, the average. For the remaining crops the total yields for 1921 were in bushels as follows, the corresponding totals for 1920 and for the five-year average being given within brackets: rye 21,455,260 (11,306,400;

7,350,360); peas 2,769,981 (3,528,100; 3,298,448); beans 1,089,900 (1,265,300; 1,580,776); buckwheat 8,230,100 (8,994,700; 8,809,280); mixed grains 22,271,500 (32,420,700; 24,535,316); and corn for husking 14,904,000 (14,334,800; 11,905,040).

Root and Fodder Crops.—The final estimate of the production of potatoes was 107,346,000 bushels from 701,912 acres, as compared with 133, 831,400 bushels from 784,544 acres in 1920 and with 101,388,300 bushels from 693,690 acres, the five-year average. The yield per acre was 152¾ bushels for 1921, as against 170½ bushels in 1920 and 146·15 bushels, the average. Turnips, mangolds, etc. produced a total of 79, 150,300 bushels from 227, 675 acres, as compared with 116,390,900 bushels from 290,286 acres in 1920 and with 90,350,220 bushels from 258,538 acres, the five-year average. The yield per acre was 347¾ bushels, as against 401 bushels in 1920 and 349½ bushels, the average. Sugar beets produced 268,000 tons from 28,367 acres, as against 412,400 tons from 36,288 acres in 1920 and 204,200 tons from 21,558 acres, the average. The yield per acre was 9.45 tons in 1921, as compared with 11.37 tons in 1920 and with 9.45 tons, the average.

The total yield of hay and clover was 11,366,100 tons from 10,614,951 acres, as compared with 13,338,700 tons from 10,379,292 acres in 1920 and with 14,534,140 tons from 9,513,118 acres, the five-year average. The yield per acre in 1921 was 1.07 ton, as compared with 1.30 ton in 1920 and with 1.55 ton, the five-year average. The average yield per acre for 1921 was the lowest on record. Grain hay in British Columbia yielded 155,500 tons from 57,603 acres, as compared with 136,400 tons from 60,612 acres in 1920. A return of 1,133,476 tons of grain hay in Alberta in 1921 was made for the first time. Of alfalfa the total yield in 1921 was 662,200 tons from 263,892 acres, as compared with 583,790 tons from 238,556 acres in 1920 and 414,708 tons from 174,206 acres, the five-year average. The yield per acre was 2.50 tons, as against 2.45 tons in 1920 and 2.40 tons, the average. Fodder corn gave the excellent yield of 6,361,600 tons from 585,395 acres, as against 5,641,750 tons from 588,977 acres in 1920 and 3,994,036 tons from 452,478 acres, the five-year average. The yield per acre was 10¾ tons, as compared with 9·60 tons in 1920 and 8·85 tons, the five-year average. The total yield of fodder corn for 1921 is the highest on record for Canada, and the average yield per acre was the highest with only one exception, viz., 11¼ tons in 1908.

Values of Field Crops.—According to returns of crop correspondents, the average prices per bushel, as received by farmers, for grain and other crops of Canada in 1921, were as follows, the corresponding prices for 1920 and for the five-year period 1916-20 being given within brackets: fall wheat $1.02 ($1.88; $1.98); spring wheat 80 cents ($1.60; $1.79); all wheat 81 cents ($1.62; $1.81); oats 34 cents (53c.; 65c.); barley 47 cents (83c.; $1); rye 72 cents ($1.33; $1.40); peas $1.96 ($2.42; $2.84); beans $2.90 ($3.88; $5.33); buckwheat

89 cents ($1.28; $1.41); mixed grains 62 cents (90c.; $1.11); flaxseed $1.44 ($1.94; $2.66); corn for husking 83 cents ($1.16; $1.42); potatoes, 77 cents (97c.; 95c.); turnips, mangolds, etc., 34 cents (41c.; 44c.). For fodder crops the prices were per ton: hay and clover $23.56 ($26.10; $17.03); alfalfa $19.75 ($23.79; $18.67); fodder corn $7.05 ($7.75; $6.54); sugar beets $6.50 ($12.80; $10.74). In general, the unit prices for all descriptions were considerably less for 1921 than they were for either of the two preceding years; in fact, for wheat the price per bushel for 1921 was only 6 cents above the pre-war five-year average 1910-14, whilst for oats and barley the prices per bushel were somewhat less.

The total values of crops on farms in 1921 were estimated as follows, the corresponding values for 1920 and for the five-year average 1916-20 being given within brackets: wheat $242,936,000 ($427,357,300; $412,778,400); oats $146,395,300 ($280,115,400; $283,318,520); barley $28,254,150 ($52,821,400; $58,841,754); rye $15,399,300 ($15,085,650; $10,303,490); peas $5,439,400 ($8,534,300; $9,363,160); beans $3,155,800 ($4,918,100; $8,427,640); buckwheat $7,285,100 ($11,512,500; $12,436,000); mixed grains $13,901,220 ($29,236,200; $27,168,150); flaxseed $5,938,400 ($15,502,200; $17,937,920); corn for husking $12,317,000 ($16,593,400; $16,926,080); potatoes $82,147,600 ($129,803,300; $96,543,900); turnips, mangolds, etc., $26,620,400 ($48,212,700; $39,801,080); hay and clover $267,764,200 ($348,166,200; $247,616,260); grain hay $14,476,000; alfalfa $13,211,000 ($13,887,700; $7,751,740); fodder corn $44,880,800 ($43,701,000; $26,110,100); sugar beets $1,742,000 ($5,278,700; $2,192,700). The aggregate value of all field crops in 1921 was $931,863,670, as compared with $1,455,244,050 in 1920 and $1,537,170,100 in 1919, the highest on record.

Grain Yields of the Prairie Provinces.—The total yields in the three Prairie Provinces (Manitoba, Saskatchewan and Alberta) were estimated as follows: wheat 280,098,000 bushels from 22,181,329 sown acres, as compared with 234,138,300 bushels from 16,841,174 acres in 1920; oats 284,147,500 bushels from 10,819,641 acres, as compared with 314,297,000 bushels from 10,070,476 acres in 1920; barley 44,681,600 bushels from 2,109,065 acres, as compared with 40,760,500 bushels from 1,838,791 acres in 1920; rye 19,109,700 bushels from 1,688,228 acres, as compared with 8,273,600 bushels from 482,011 acres in 1920; and flaxseed 3,945,700 bushels from 516,972 acres, as compared with 7,588,800 bushels from 1,391,076 acres in 1920. According to reports from crop correspondents in December last, the following areas were estimated to have produced no grain: wheat 1,560,847 acres (7 p.c. of area sown); oats 2,365,753 acres (21·9 p.c. of area sown); barley 129,200 acres (6·1 p.c. of area sown); rye 308,687 acres (18·3 p.c. of area sown); flaxseed 30,723 acres (6·3 p.c. of area sown).

Area under Pasture in Canada, 1918-21.—Table 2 shows the estimated area under pasture in seven of the provinces of Canada for each of the years 1918 to 1921. The figures are derived from the annual statistics of agriculture collected jointly by the Dominion Bureau of Statistics and the Provincial Departments of Agriculture, and published in the Monthly Bulletin of Agricultural Statistics for December, 1921, p. 491.

2.—Area under Pasture in Canada, 1918-1921.

Province.	1918.	1919.	1920.	1921.
	acres.	acres.	acres.	acres.
Prince Edward Island	217,927	233,982	247,360	250,098
Nova Scotia	1,199,091	1,177,099	1,075,827	955,030
New Brunswick	610,799	723,972	663,012	613,030
Quebec	4,764,548	3,893,777	3,869,696	4,016,725
Ontario	3,561,754	3,499,802	3,432,620	3,401,998
Saskatchewan	933,862	831,592	784,234	678,815
British Columbia	45,000	61,220	61,942	61,508
Total for the seven provinces	11,332,981	10,421,444	10,134,691	9,977,204

The "range pasture" in British Columbia was estimated at 891,249 acres in 1921, as compared with 847,720 acres in 1920. For 1920 and 1921 the estimates in the table are subject to correction by the data of the Census of 1921.

British Columbia	15,232,000	12,171,100	17,547,600	24,603,000	27,017,500	20,447,000

Comparative Value of Field Crops, 1920 and 1921.— In Table 6, the field crops of Canada for the year 1921 are compared with those of 1920 in respect of quantity and value. For the whole of the field crops the value in 1921 is less than in 1920 by $443,413,000; that is to say, if the prices of 1920 had ruled the same as in 1921, the value of the field crops would have been $1,375,276,000, instead of only $931,863,000. The total decrease of $523,381,000 is due chiefly to the decrease in prices amounting to $443,413,000, but also to the fact that total quantities, principally in respect of oats, potatoes, roots and hay and clover, are smaller, representing the value of $79,968,000. Rye, corn and alfalfa are the only crops showing an increase in total value, and this is due to larger yields. In the case of rye the reduction in value of $13,227,000 is offset by the increase in production, amounting to $13,540,000; so that the net difference is a small plus one of $313,000. For grain hay in Alberta there was no record in 1920; so that although the amount of $11,336,000 appears as an increase over 1920, this may not be so in reality. All the rest of the crops show a large decrease in value owing to the great fall in prices. For spring wheat the decrease due to lower prices, viz. $230,460,000, is offset by an increase in quantity representing $66,743,000. Of the decrease in the value of oats, viz. $133,720,000, the sum of $78,570,000 is due to lower prices and $55,150,000 to smaller quantities, 1920, giving, it will be remembered, a bumper oat crop.

6.—Field Crops of Canada, compared as to Quantity and Value, 1920 and 1921.

("000" omitted).

Field Crops.	Actual Value 1921.	Value at prices of 1920.	Actual Value 1920.	Increase (+) or decrease (−).	Due to higher (+) or lower (−) prices.	Due to larger (+) or smaller (−) quantities.

Turnips, mangolds, etc	26,620	32,786	48,213	− 21,593	− 6,166	−15,427
Hay and clover	267,764	296,671	348,166	− 80,402	− 28,907	−51,495
Grain hay (B.C.)	3,141	5,151	4,518	− 1,377	− 2,010	+ 633
Grain hay (Alta.)	11,336	11,336	-	+ 11,336	-	+11,336
Alfalfa	13,211	15,753	13,888	− 677	− 2,542	+ 1,865
Fodder corn	44,881	49,277	43,701	+ 1,180	− 4,396	+ 5,576
Sugar beets	1,742	3,430	5,279	− 3,537	− 1,688	− 1,849
Totals	931,863	1,375,276	1,455,244	−523,381	−443,413	−79,968
				per cent	per cent	per cent
Increase or decrease	-	-	-	− 35·9	−30·4	− 5·5

Taking the field crops as a whole, the total value is less than in 1920 by 35·9 p.c., the decrease being caused by lower prices to the extent of 30·4 p.c. and by smaller quantities to the extent of 5·5 p.c.

Quality of Grain Crops, 1912-1921.—Table 7 gives the average weight per measured bushel for each of the principal grain crops from 1912 to 1921, with the ten-year average for the period 1911-1920.

7.—Quality of Grain Crops as indicated by Average Weight per measured bushel, 1912-21.

Flax	54·88	55·79	52·49	55·28	54·99	54·73	53·72	55·14	54·79	54·34	55·01
Corn, husking	55·67	56·27	56·62	56·32	56·51	56·18	53·97	-	56·45	55·56	55·92

The table shows that for fall wheat the weight in 1918 and 1919 was about 61·20 lb., which is above the decennial average of 60·23 lb. For spring wheat the average, 59·05 lb., was exceeded in five years out of the ten and for all wheat five years out of the ten, the average being 59·34 lb. The average of 35·13 lb. for oats was exceeded for six years out of the ten and for barley (average 47·23 lb.) five years out of the ten. For the remaining crops the decennial averages are as follows, the number of times the average was exceeded being placed within brackets; rye 55·19 lb. (5); peas 59·74 lb. (7); beans 59·50 lb. (7); buckwheat 47·69 lb. (4); mixed grains 44·82 lb. (4); flax 55·01 lb. (3); corn for husking 55·92 lb. (6).

Average Values of Farm Land.—Table 8 shows that in 1921 the average value of the occupied farm lands of Canada, which includes both improved and unimproved land, together with dwelling houses, barns, stables and other farm buildings, was returned as $40 per acre, as compared with $48 in 1920, $46 in 1919, $41 in 1918, $38 in 1917, $36 in 1916 and $35 in 1915. By provinces, the value for 1921 was highest in British Columbia, viz., $122. In the other provinces the average values of farm land per acre were reported as follows: Ontario $63, Quebec $59, Prince Edward Island $46, Nova Scotia and Manitoba $35, Saskatchewan $29, New Brunswick and Alberta $28. The average values per acre in 1921 of orchards and fruitlands, including buildings, etc., in the fruit growing districts of Nova Scotia, Ontario and British Columbia were reported as follows: Nova Scotia $117, Ontario $137, and British Columbia $300.

8.—Average Values per acre of Occupied Farm Lands in Canada, as estimated by Crop Correspondents, 1908-10, 1914-21.

Average Wages of Farm Help.—For the year 1920 the average wages of farm help were the highest on record. For 1921 the returns showed a very substantial reduction. For the whole of Canada the average wages per month of farm helpers during the summer season of 1921 were for men $67 and for women $42, including board, the average value of which was $22 per month for men and $18 per month for women. In 1920 the corresponding averages were: $86 for men, including board value $26, and $47 for women, including board value $20. For the complete year 1921 the average value of wages and board was $669 for men and $449 for women, as compared with $821 for men and $492 for women in 1920. By provinces, the average

wages per month for men and women, respectively, in the summer season and including board, were in 1921 as follows, the figures for 1920 being given within brackets: Prince Edward Island $45 and $27 ($60 and $32); Nova Scotia, $56 and $31 ($73 and $38); New Brunswick, $54 and $31 ($79 and $35); Quebec, $58 and $32 ($86 and $40); Ontario, $60 and $38 ($75 and $44); Manitoba, $79 and $50 ($98 and $58); Saskatchewan, $80 and $51 ($102 and $60); Alberta, $78 and $54 ($107 and $62); British Columbia $79 and $54 ($95 and $63).

In Table **9** the total value of wages and board is given for 1921, as compared with previous years, and in Table **10** the value of the yearly board for 1921 as compared with 1920 is given separately.

STATISTICS OF FARM LIVE STOCK.

Numbers of Farm Animals.—In Table 11 are given by provinces the number of each description of farm live stock in Canada for the year 1921, as compared with 1920, according to estimates made jointly by the statistical authorities of the Dominion and Provincial Governments. The total number of horses in Canada on June 15, 1921, was estimated at 3,813,921, as compared with 3,400,352 in 1920. Mules numbered 10,424, as against 9,055 in 1920. Cattle numbered 10,206,205, as against 9,572,196; sheep 3,675,860 as against 3,720,783, and swine 3,904,895, as against 3,516,678. All descriptions therefore increased since 1920, excepting sheep, which for the first time since 1917 showed a decrease, this amounting to 44,923. Poultry showed large increases, as compared with 1920, hens from 25,942,105 to 34,340,474; turkeys from 791,766 to 1,199,494; geese from 754,455 to 880,014 and ducks from 617,638 to 762,135. Rabbits in British Columbia numbered 65,789, as against 82,146. By provinces, horses increased in the Prairie Provinces and in British Columbia, but decreased in the remaining provinces. Cattle increased in all parts, except the Maritime Provinces and Quebec. Sheep decreased, except in Prince Edward Island, Saskatchewan, Alberta and British Columbia, where there was an increase. Swine decreased in the Maritime Provinces, Ontario and British Columbia, and increased in the other provinces. Poultry increased, except only in Nova Scotia and New Brunswick. As in the case of field crops, the differences were due partly to correction by census data and partly to actual change.

11.—Numbers of Farm Live Stock in Canada, by Provinces, 1920 and 1921.

Classification.—HORSES: Stallions, Mares and Geldings, 2 years old and over; Colts and Fillies, under 2 years. CATTLE: Bulls for breeding; Milch Cows; Calves, under 1 year; Steers, 2 years old and over; All other cattle.

Values of Farm Live Stock.—The average values for all descriptions of farm live stock (Tables **13** and **14**) showed in 1921 an extraordinary decrease as compared with 1920, and they were also below the values which were ruling before the war. For horses, the values were the lowest on record since these annual returns were begun in 1909. For Canada as a whole, horses under one year averaged $38, as against $49 in 1920; horses one year to under three years $79, against $102; and horses three years old and over $123, as against $151. Cattle under one year were $12, as against $20; cattle one year to under three years $26, as against $45; cattle three years and over $39, against $67. For all descriptions, the average value per head for Canada was for horses $83, as against $106 in 1920; for milch cows $51, as against $80; for other cattle $28, as against $47; for all cattle $37, as against $59; for sheep $6, as against $10; and for swine $14, as against $23. For swine per 100 lb. live weight the average was $10, as against $15 in 1920. The per capita values were the lowest of any during the last seven years 1915 to 1921, except that for swine the value in 1915 was $14 as in 1921.

By application of the average values per head to the numbers of farm live stock as returned in June last, it is possible to calculate approximately the total values of farm live stock in Canada for the year 1921 with the corresponding values for 1920 in brackets as follows: horses, $314,764,000 ($361,328,000); milch cows, $190,157,000 ($281,675,000); other cattle, $183,649,000 ($279,825,000); all cattle, $373,806,000 ($561,500,000); sheep, $23,308,000 ($37,263,000); swine, $54,842,000 ($81,155,000). Thus, the estimated total value of these descriptions of farm live stock amounts to $766,720,000, as compared with $1,041,246,000 in 1920 and with $749,640,000 in 1915. As compared with 1920, the decrease in value is $274,526,000, or over 26 p.c.

13.—Average Values of Farm Animals and of Wool, as estimated by Crop Correspondents, 1915-21.

Provinces.		Horses.			Milch cows.	Other horned cattle.			Swine per 100 lb. live weight.	Sheep.	Wool per lb.

Farm Poultry.—Table 17 gives the numbers and values of farm poultry in 1921, as compared with 1920, the values being estimated by application to the numbers of average values per head as reported by crop correspondents. For Canada, the average values per head of each description of farm poultry in 1921 were returned as follows: turkeys $3.39, as compared with $4 in 1920; geese $2.42, against $2.80; ducks $1.25, against $1.50; other fowls 90 cents, against $1.08. Approximately the total values of farm poultry for all Canada in 1921 were as follows, the corresponding totals for 1920 being given within brackets: turkeys, $4,069,300 ($3,225,000); geese, $2,126,200 ($2,131,100); ducks, $950,900 ($976,900); other fowls, $30,860,600 ($30,683,000); Total, $38,007,000 ($37,016,000). The greater value in 1921 was due to increase in the numbers reported.

Fur Farming in Canada.—According to reports issued by the Dominion Bureau of Statistics, the total number of fur farms in Canada was 794 in 1921, as compared with 587 in 1920, an increase of 207. The returns for these two years are more complete than those collected for the first time in 1919; so that comparisons are not attempted with the figures recorded at pages 227 and 228 of the Year Book for 1920. Table **18** gives, by provinces, the number of fur farms, the value of land and buildings, and the value of fur-bearing animals for the two years 1920 and 1921.

18.—Number of Fur Farms, Value of Land and Buildings and Value of Fur-bearing Animals, 1920 and 1921.

Total	16,529	22,455	4,722,905	5,775,095

The table shows that the industry is expanding not only as regards increase in the number of foxes, which are the principal fur-producing animals domesticated, but also by the addition of other fur-bearing animals. Mink, raccoon, and skunk have increased in numbers and in 1921 there appear for the first time opossum, bears, beavers and muskrats. The total number of fur-bearing animals on the farms at the end of 1921 was 22,455, with a value of $5,775,095, as compared with 16,529 animals valued at $4,722,905 in 1920. The total for 1921 comprises 17,321 silver foxes valued at $5,588,315; 1,220 patch foxes valued at $101,550; 484 red foxes valued at $10,035; 210 mink, value $5,366; 750 karakul sheep, value $60,000; 2,250 muskrat, value $5,550, and 220 miscellaneous, value $4,279. The number of fur-bearing animals sold from fur farms during 1921 was 3,175, value $806,139. Of these, 2,668 were silver foxes, value $779,110. The pelts sold numbered 4,854, valued at $609,097; they included the pelts of 3,790 silver foxes, value $579,456, of 402 patch foxes, value $22,608, of 336 red foxes, value $4,261, of 91 mink, value $962 and of 235 miscellaneous, value $1,810. The total amount received by fur farmers in 1921 from the sale of live fur-bearing animals and pelts was $1,415,236, as compared with $1,151,556 in 1920, an increase of $263,680, or 23 p.c.

DAIRYING.

Production and Value of Creamery Butter.—The total quantity of creamery butter produced in Canada in 1921 (Table **20**), was 122,776,580 lb., of the value of $45,893,088, as compared with 111,691,718 lb., of the value of $63,625,203 in 1920, an increase in quantity of 11,084,862 lb., or 10 p.c., and a decrease in value of $17,732,111, or 28 p.c. The decrease in value was caused by a lower average price per lb., which dropped from 56 cents in 1920 to 37 cents

in 1921. Increased production of creamery butter is shown by all the provinces, excepting Prince Edward Island, the largest proportionate increase being in British Columbia, where the production increased during the year by 36 p.c. In Ontario the production increased by 16 p.c.

Production and Value of Factory Cheese.—The total production of factory cheese in 1921 (Table **21**) was 161,062,626 lb., of the value of $28,615,185, as compared with 149,201,856 lb., of the value of $39,100,872 in 1920, an increase in quantity of 11,860,770 lb., or 8 p.c., and a decrease in value of $10,485,687, or 27 p.c. The average wholesale price of cheese for Canada fell from 26 cents per lb. in 1920 to 17 cents in 1921. The provinces showing increased production were Alberta 123 p.c., Manitoba 120 p.c., British Columbia 23 p.c., Ontario 11 p.c., and Quebec 2 p.c.

Condensed Milk and Milk Powder.—The quantity of condensed milk made in Canada in 1921 was 39,101,243 lb., valued at $5,844,333, a decrease in quantity of 14,561,456 lb., or 37 p.c., as compared with 1920. The quantity of evaporated milk made was 31,202,713 lb., valued at $3,428,456, an increase in quantity over 1920. The quantity of milk powder and skim milk powder made in 1921 was 7,112,609 lb., valued at $1,303,048. Of the 27 condenseries in operation in Canada in 1921, 22 were situated in Ontario, and to the total value of products of condenseries of $14,162,762, Ontario contributed $12,241,579. Table **22** shows the quantity and value of products other than butter and cheese for the years 1919, 1920 and 1921.

Retrospective Statistics.—In Table **23** the production and value of creamery butter and factory cheese is compared by provinces and for all Canada for the years 1900, 1907 and 1910, and annually from 1915 to 1921. Table **24** shows the total value of all the products of dairy factories by provinces for the five years 1917 to 1921.

FRUIT PRODUCTION IN CANADA, 1920.[1]

Commercial Production and Value of Apples.—Statistics, collected jointly by the Dominion Bureau of Statistics and the Fruit Branch of the Dominion Department of Agriculture, showed that the commercial production of apples in Canada for the year 1920 was 3,404,340 barrels of the value of $29,849,149, as compared with 3,334,660 barrels, of the value of $24,396,210 in 1919, representing for 1920 an increase of 69,680 barrels in production and of $5,452,939 in value. By provinces, the production and value were as follows: Nova Scotia 1,160,000 barrels, value $10,931,420, in 1920, as compared with 1,600,000 barrels, value $9,989,680, in 1919; New Brunswick 30,000 barrels, value $167,371, in 1920, 40,000 barrels, value $307,400, in 1919; Quebec 88,000 barrels, value $569,688, in 1920, 70,500 barrels, value $527,950, in 1919; Ontario 1,621,800 barrels, value $13,073,765, in 1920, 878,860 barrels, value $7,030,880, in 1919; British Columbia 504,540 barrels, value $5,106,905, in 1920, 745,300 barrels, value $6,540,300, in 1919. The average value per barrel for Canada was $8.77 in 1920, as compared with $7.31 in 1919. By provinces, the average values were: Nova Scotia $9.42 in 1920, as against $6.24 in 1919; New Brunswick $5.78, against $7.68; Quebec $6.47, against $7.50; Ontario $8.06, against $8; British Columbia $10.12, against $8.78.

These figures are set out in Table **25**, and in Table **26** the estimated distribution of commercial apples into early, fall and winter varieties is given for all the provinces for the year 1920. Table **27** shows the apple production in Ontario by the 15 fruit inspection districts of the Fruit Branch of the Department of Agriculture for the year 1920, as compared with 1919.

NOTE—Included in the above table are total export sales amounting to 1,127,400 barrels of the value, at par rate of exchange, of $12,470,444, an average price per barrel of $11.06. The province of Nova Scotia exported almost two-thirds of its total crop of 1920 at an average wholesale price of $10.60 per barrel. The average wholesale price on the domestic market was $6.25 per barrel. For the province of British Columbia boxes are expressed as barrels at the rate of three boxes to the barrel.

[1]Abridged from the complete Report in the Monthly Bulletin of Agricultural Statistics, August, 1921, (Vol. 14, No. 156, p. 329). and also published separately.

[1]Estimated.

Nursery Trees, Bushes and Plants.—During the year ended September 30, 1920, the total value of all nursery fruit stock sold in Canada amounted to $500,167.52, as compared with $270,817.75 in 1919. Of apple trees 453,609 were sold to the value of $206,286.48, as compared with 306,419 of the value of $85,560.76 in 1919. For 1920 the apples were divided into early apples 66,088, value $31,313.28; fall apples 65,597, value $29,529.85; winter apples 308,860, value $139,487.45 and crab apples 13,064, value $5,955.90. The number and value of other descriptions in 1920 were as follows: Pears 64,383, value $37,870.70; plums 79,451, value $51,599.49; peaches 38,763,

value $18,135.13; cherries 53,521, value $36,345.66; apricots 9,691, value $6,403.20; quinces 382, value $152.80; blackberries 1,735, value $158.15; currants 223,040, value $37,465.81; grapes 71,906, value $12,207.83; gooseberries 87,664, value $18,657.43; raspberries 589,999, value $32,157.31; mulberries 32, value $27.45; loganberries 28,057, value $6,111.40; strawberries 2,788,333, value $36,588.68. The average wholesale price per tree, bush or plant works out as follows: apples 45 cents against 28 cents in 1919; pears 59 cents against 35 cents; plums 65 cents against 33 cents; peaches 46 cents against 17 cents; cherries 68 cents against 34 cents; apricots 66 cents; quinces 40 cents; blackberries 11 cents against 4 cents; currants 17 cents against 16 cents; grapes 17 cents against 10 cents; gooseberries 21 cents against 23 cents; raspberries 5 cents against 6 cents; mulberries 85 cents; loganberries 22 cents against 10 cents; strawberries $1.29 per 100 against $1.43 per 100.

In Table **28** is given for Canada, and for each of the provinces, a summary of the number and value of each description of fruit stock sold during 1920, as compared with 1919.

COLD STORAGE.

Cold Storage of Perishable Products.—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), subsidies have been granted by the Dominion Government towards the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture. Table **29** shows for 1922 the number of cold storage warehouses in Canada, with the refrigerated space. This amounts to 36,443,028 cubic feet, of which 5,244,358 cubic feet apply to warehouses subsidized under the Act and 31,198,670 cubic feet apply to non-subsidized warehouses.

29.—Cold Storage Warehouses in Canada, 1922.

PRICES OF AGRICULTURAL PRODUCE.

Tables **30** to **35** record the average prices of Canadian agricultural produce and Table **36** the yearly average prices from 1902 of British-grown wheat, barley and oats. Tables **30** to **34** record the average prices of Canadian grain at Winnipeg and Fort William, weekly, for the weeks ended Saturday during the year 1921 (Tables **30, 32, 33**) and in monthly averages for the two years 1920 and 1921 (Tables **31, 34**). Table **35** gives the monthly range of average prices in British markets of Canadian wheat and oats for the years 1920 and 1921, the English currency, weights and measures having been converted into Canadian equivalent denominations at the par rate of exchange. Table **37** gives the monthly average prices of flour, bran and shorts at principal markets in 1921, Table **38** the average prices of Canadian live stock at principal markets for the three years 1919 to 1921 and Table **39** the average monthly prices of selected descriptions of Canadian live stock at principal markets in 1921. The last-named table is an abridgment of the more detailed classification appearing in the Monthly Bulletin of Agricultural Statistics. Tables **40** and **41** give the average prices paid to and paid by farmers in Canada for clover and grass seed in 1921 and 1922.

30.—Weekly Range of Prices of Wheat at Winnipeg and Fort William, 1921.

Index Numbers of Agricultural Prices.—Records of the average prices received by farmers for agricultural produce have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office and Dominion Bureau of Statistics. From these records annual index numbers have been calculated for each crop and for the field crops as a whole. The average prices for the five year pre-war period 1909-1913 have in each case been taken as 100, and the figures for each year are expressed as a percentage of these. In calculating the index numbers for the combined field crops, the various crops have been weighted according to the proportion which the value of each crop in each year bears to the total value for that year. Table 42 and its accompanying illustrative diagram show the great increase which took place in agricultural prices during the war period and the fall which took place in 1920 and 1921. The year 1921 will indeed be memorable for the great and sudden fall in the prices of agricultural produce, and the index numbers provide a convenient means of measuring its extent, as compared with previous years, and especially with the maximum prices, which were reached in 1919. For wheat, in 1921, the index number for Canada was 117·4, representing a drop of 117·3 points as compared with 1920 and of 226·1 points as compared with 1919. The price was only 17·4 p.c. above that of the pre-war base-period 1909-13. Oats and barley receded by 55·9 points and 76·6 points respectively from the records of 1920, and were exactly equal to the pre-war average for the five years 1909-13. The hay and clover price remained relatively high, but the index number was 21·8 points below that of 1920 and was 102·2 points above the pre-war average. This was due however, to the poorest hay crop on record, caused by the prolonged drought. The Canadian weighted index number for all field crops in 1921 was 147·5, or 57·4 points below that of 1920 and 47·5 points above that of the base-period.

The total wool clip of Canada for 1921 was therefore placed provisionally at about 21,251,000 lb., as compared with 24,000,000 lb. in 1920, the estimate for 1920 being subject to correction by the census returns when available. At an average value for unwashed wool of 14 cents per lb., the total value of the wool clip of 1921 amounted to $2,975,000, as compared with $5,280,000 in 1920. The average prices per lb., for washed and unwashed wool, by provinces, for the years 1915 to 1921 are given in Table **13.** For Canada the price in 1921 was 14 cents per lb. for unwashed and 22 cents per lb. for washed wool. These are the lowest averages for wool since records were first taken in 1909.

Table **44** shows the total estimates of production and value for 1921, compared with the years 1915 to 1920, as previously published.

44.—Production and Value of Wool in Canada, 1915-21.

Year.	Sheep.	Production of Wool.	Average price per lb. of Wool.	Value.
	No.	lb.	cents.	$
1915	2,038,662	12,000,000	28	3,360,000
1916	2,022,941	12,000,000	37	4,440,000
1917	2,369,358	12,000,000	59	7,000 000
1918	3,052,748	20,000,000	60	12,000,000
1919	3,421,958	20,000,000	60	12,000 000
1920	3,720,783	24,000 000	22	5,280,000
1921	3,675,860	21,251,000	14	2,975,000

Egg Production in Canada, 1920 and 1921.—Calculations published by the Dominion Bureau of Statistics place the egg production of Canada in 1921 at 161,971,000 dozen, from 25,780,356 hens on farms, as compared with 121,604,000 dozen from 25,942,105 hens on farms in 1920. Eggs from other than farms are not included.[2]

[1]See Monthly Bulletin of Agricultural Statistics, February 1922 (Vol. 15, No. 162, p. 61).
Monthly Bulletin of Agricultural Statistics, November, 1921 (Vol. 14, No. 159), p. 444.

Tobacco.—Table 45 gives the area and yield of tobacco in Ontario and Quebec for the three years 1919 to 1921.

45.—Area and Yield of Tobacco in Canada, 1919-21.

Province.	1919.	1920.	1921.	1919.	1920.	1921.	1919.	1920.	1921.

Ontario	9,226	20,114	6,553	17,000,000	21,688,500	7,121,962	1,843	1,078	1,091
Quebec	22,360	33,000	5,256	16,770,000	26,400,000	6,127,000	750	800	1,166
Totals and averages	31,586	53,114	11,809	33,770,000	48,088,500	13,248,962	1,069	905	1,124

The prices paid for the Ontario crop of 1921 were for the bright tobacco, flue-cured, from 42 to 45 cents per lb. For white Burley the price paid was from 10 to 12 cents per lb., the average being about 17·5 cents and the average for the whole being 25 cents per lb. In Quebec, the prices for the best grades of cigar tobacco of the crop of 1921 ranged from 10 to 12 cents per lb, and the average for the whole crop of 1921 did not exceed 10 cents per lb. For Ontario, the average revised price of the crop of 1920 was 15 cents and that for Quebec 10 cents per lb. Applying these averages to the estimated production, the value of the crops of 1921 was for Ontario $1,780,490 (7,121,962 lb. at 25 cents per lb.), as compared with $3,253,275 in 1920 (21,688,500 lb. at 15 cents per lb.) and for Quebec $612,700 (6,127,000 lb. at 10 cents per lb.), as compared with $2,640,000 (26,400,000 lb. at 10 cents per lb.) in 1920. For both provinces the total estimated value of the tobacco crop in 1921 was $2,393,190, as compared with $5,893,275 in 1920.[1]

Agricultural Instruction Act.—Under the Agricultural Instruction Act of 1913 (3 Geo. V, c. 5), appropriations are annually payable, for a period of ten years ending March 31, 1923, by the Dominion Government to each of the Provincial Governments of Canada for the encouragement of agriculture "through education, instruction and demonstration carried on along lines well devised and of a continuous nature" and for the purpose of assisting in the work of veterinary colleges established in the provinces. The annual appropriation now amounts to $1,100,000 and is allocated by provinces as follows: Prince Edward Island, $31,749.22; Nova Scotia, $81,716.69; New Brunswick, $64,110.80; Quebec, $271,113.76; Ontario, $336,303.26; Manitoba, $77,113.11; Saskatchewan, $81,728.48; Alberta, $66,965.62; British Columbia, $69,199.06; Veterinary Colleges, $20,000.00. A Report on the Agricultural Instruction Act for the year 1920–21 was published in 1921 [No. 15a–1922].

[1]For details of the production of tobacco in Ontario and Quebec by counties, for the year 1921, see Monthly Bulletin of Agricultural Statistics, January 1922 (Vol. 15, No. 161), pp. 28-34.

Sugar Beets and Beetroot Sugar.—There are three sugar factories in Canada which manufacture sugar from Canadian grown sugar beets. They are situated at Chatham, Wallaceburg and Kitchener, in the province of Ontario, and are under the control of the Dominion Sugar Company, Ltd., of Chatham. From 1903 until 1914, when it went out of business, there was also in operation the Knight Sugar Company of Raymond in Alberta. Table **46** gives particulars respecting the area, yield and value of sugar beet as a farm crop and of the production of refined sugar made from Canadian-grown sugar beets for the year 1920, with the comparative figures for the years 1911-19.

46.—Area, Yield and Value of Sugar Beets in Canada and Production of Refined Beetroot Sugar, 1911-1920.

Year.	Acres grown.	Yield per acre.	Total yield.	Average price per ton.	Total value.	Production of refined beetroot sugar.
	Acres.	Tons.	Tons.	$	$	lb.
1911	20,677	8·50	175,000	6.59	1,154,000	21,329,689
1912	18,900	10·50	201,000	5.00	1,005,000	26,767,287
1913	17,000	8·75	148,000	6.12	906,000	26,149,216
1914	12,100	9·00	108,600	6.00	651,000	31,314,763
1915	18,000	7·75	141,000	5.50	775,500	39,515,802
1916	15,000	4·75	71,000	6.20	440,000	17,024,377
1917	14,000	8·40	117,600	6.75	793,800	23,376,850
1918	18,000	11·25	204,000	12.71	2,593,715	50,092,835
1919	18,800	9·50	180,000	14.61	2,630,027	37,839,271
1920	34,491	9·94	343,000	15.47	5,307,243	89,280,719

The results for the year 1920 constituted a record, whether as regards the area, yield and value of the roots grown or the production of refined beetroot sugar. The area and yield of the roots grown were nearly double and the value of the roots as well as the quantity of refined sugar was more than double the returns of 1919. The value of the beetroot sugar produced in 1920 was $12,856,424, representing an average wholesale price per lb. of 14·4 cents, as compared with $3,924,411 and 10·4 cents per lb. in 1919 and $4,358,077 and 8·7 cents per lb. in 1918.

Maple Sugar.—The maple sugar industry of Canada is carried on in the provinces of Quebec, Ontario, New Brunswick, and Nova Scotia. From 1851 to 1861 the average yearly production was about 13,500,000 lb., from 1861 to 1871 about 17,500,000 lb., from 1871 to 1881, 19,000,000 lb., and from 1881 to 1891 about 22,000,000 lb. During the next decade the yearly average fell to about 21,200,000 lb., and in more recent years to little less than 20,000,000 lb. In the Maritime Provinces the yearly output has rarely exceeded 500,000 lb. Quebec produces about 14,300,000 lb. and Ontario 5,000,000 lb. per annum. It is estimated that the industry, which represents an annual value of almost $2,000,000, is carried on by about 50,000 growers. Table **47** shows the production and value of maple products in the province of Quebec according to the annual statistics of the Dominion and Quebec Bureaus of Statistics as follows:

47.—Maple Products in the Province of Quebec, 1918-1921.

Year.	Maple Sugar.	Maple Syrup.	Total Value.

According to Table **49** therefore, on August 31, 1921, about 13,727,000 bushels of wheat, 3,849,500 bushels of barley, 43,960,000 bushels of oats, 830,500 bushels of rye and 1,804,000 bushels of flaxseed constituted the "carry over" into the new crop year running from September 1, 1921, to August 31, 1922.

Table **50** gives the results of inquiries as to the quantities of wheat, and wheat flour expressed as wheat, in Canada on March 31, 1922, with the corresponding figures for 1918 to 1921.

Available for distribution	182,453	255,206	Unaccounted for	6,862	–

NOTE.—Flour is expressed as wheat on the basis of 1 barrel of flour weighing 196 lb. being equal to 4½ bushels of wheat.

As regards the commercial movement of the crop, Table **52** is constructed in general conformity with the data published by the Internal Trade Branch of the Dominion Bureau of Statistics. It will be noted that for the year ended August 31, 1920, the whole of the estimated gross production of 193,260,000 bushels of wheat is accounted for with the exception of a plus balance of 6,862,000 bushels, or about 3½ p.c. of the total. For 1921, the figures exactly balance.

Table **53** presents similar data in respect of oats. The bulk of this crop is consumed as food for live stock, and the table shows approximately how the remaining portion of the crop is disposed of, including the quantities exported as grain, oatmeal and rolled oats, the quantity retained for seed and the quantity milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity consumed in Canada for feeding to live stock, the amount being estimated at 379,914,000 bushels in 1921 and 298,862,000 bushels in 1920.[1]

53.—Distribution of the Canadian Oat Crops of 1919 and 1920.

			Balance for home consumption as grain	298,862	379,914

[1] For similar calculations extending over a series of years both for wheat and oats, see the Year Book of 1920, pp. 263-266 and the Monthly Bulletin of Agricultural Statistics for April, 1920 (Vol. 13, No. 140), p. 75 and April, 1922 (Vol. 15, No. 164), p. 127.

Per Capita Consumption of Wheat in Canada.—It is calculated that for the period of ten years ended August 31, 1919, the average per capita consumption of wheat in Canada was 5·8 bushels, that during the four years of war (1915–18) the rate was 4·2 bushels and that during the five-year pre-war period from 1910 to 1914 it was 7·7 bushels. These rates represent the gross per capita consumption after accounting for the whole of the production in the way of losses due to cleaning and unmerchantable grain, adding the imports and deducting exports and grain retained for seed. During recent years the Dominion Bureau of Statistics has perfected arrangements for the periodical collection of statistics of wheat milled in Canada. These indicate on the basis of three years' returns that the per capita consumption of wheat is 5·4 bushels, a figure only 0·4 bushels below that of 5·8 bushels, the average above given for the ten year period ended August 31, 1919. A report on the Flour Milling Industry of Canada for 1920, issued in March, 1922, by the Industrial Census Division of the Bureau placed the per capita consumption of wheat flour in Canada for the calendar year 1920 at 0·96 barrel, representing, at 4·5 bushels to the barrel, 4·3 bushels. According to the quantity shown in Table **52** as milled in the crop year ended August 31, 1921, viz., 39,479,000 bushels, the per capita consumption is 4·5 bushels, an excess difference of only 0·2 bushel. The rate shown by the Industrial Census Branch applies, however, only to a single year. The milling statistics of the Internal Trade Division include offals, whilst those of the Industrial Census Branch represent the pure flour as used for food. The rate for the ten years 1910 to 1919 represents still more calculations that are gross rather than net. Altogether the conclusion appears to be justified that the average per capita consumption of wheat in Canada is close to 5 bushels, either slightly more or slightly less.

Agricultural Revenue and Wealth of Canada.—Table **54** shows under principal headings the gross agricultural revenue of Canada, by provinces, for each of the four years 1918 to 1921. It is important to observe that the figures represent gross values, because it is not possible to distinguish between crops used as materials for other kinds of production, such as the feeding of live stock, nor to allow for the costs of production.[1]

[1]For explanation of the methods used in estimating values, see the original article in the Monthly Bulletin of Agricultural Statistics for March, 1922 (Vol. 15, No. 163), pp. 85-89.

54.—Estimated Gross Annual Agricultural Revenue of Canada, by Provinces, 1918-1921.

[1]Including Manitoba. [2]Including Manitoba and Saskatchewan.
[3]Including the Yukon territory.

The table shows that for 1921 the total agricultural revenue of Canada was $1,396,233,000, as compared with $1,961,715,000 in 1920, $2,096,014,000 in 1919, and $1,873,037,000 in 1918. The total for 1921, viz., $1,396,233,000, shows a decrease as compared with 1919 of $699,791,000 or over 33 p.c., and as compared with 1920, a decrease of $565,482,000, or 28 p.c. The decrease is attributable mainly to the fall in prices, which reached their maximum in 1919. By provinces for 1921, Ontario leads with a total value of $441,418,000; next comes Quebec with the value of $325,291,000; and then follow in the order given: Saskatchewan $253,722,000; Alberta $124,512,000; Manitoba $100,016,000; New Brunswick $48,458,000; Nova Scotia $44,234,000; British Columbia $37,151,000; and Prince Edward Island $21,431,000. As between 1920 and 1921 the difference is chiefly in field crops and farm animals, the value of the former having fallen by $523,379,000, or 35 p.c., and that of the latter by $45,430,000, or 31·6 p.c.

In Table 55 are given the results of calculations showing, approximately, by provinces, for 1921, the total agricultural wealth of the Dominion.

55.—Estimated Gross Agricultural Wealth of Canada, by Provinces, 1921.

[1]Including Manitoba.

The gross agricultural wealth of Canada for 1921 is estimated at $6,831,022,000, as compared with the estimate for 1920 of $7,612,-151,000, a decrease of $781,129,000, or about 10 p.c. The comparison is however slightly affected by greater completeness in the items included for 1921.

Agricultural Implements.—The Dominion Bureau of Statistics reports that the production in 1920 of the group manufacturing agricultural implements, including cream separators, pumps and windmills, was valued at $50,301,302. The increase in the output over 1919 was $9,237,961, or 22·5 p.c. The imports during the calendar year 1920 were $28,188,576, and the exports comprised implements valued at $12,399,116. By inference the agricultural implements rendered available for the farming community were worth approximately $66,090,762. The chief implement in this connection was the tractor of which 1,054 were produced at a valuation of $1,548,840, while the imports were 13,494, value $13,459,814, and the exports were not separately reported. Making no allowance for exports, the number of tractors rendered available was thus 14,548. The threshers made available for addition to the farming equipment of the country were worth approximately $4,513,307. The production of harvesters was 35,884, value $6,129,236, and the visible supply

amounted to 28,002 only. The 81,142 ploughs produced in Canadian factories were worth $4,773,503, while the visible supply was worth about $3,614,324. Cream separators with a value of about $2,506-532 were made available, as compared with a production of 31,001, value $1,683,634.

INTERNATIONAL AGRICULTURAL STATISTICS.

World's Production of Cereals and Potatoes.—Table, constructed from data published by the International Institute of Agriculture, either in the new International Year Book of Agricultural Statistics 1909 to 1921, or in the monthly International Crop Report and Agricultural Statistics, shows the area and yield of wheat, rye, barley, oats, corn and potatoes in various countries of the world for the years 1920 and 1921 in countries of the northern hemisphere, and for years 1920-21 and 1921-22 in countries of the southern hemisphere (Argentina, Chile, Uruguay, South Africa, Australia and New Zealand). The Table includes also for purposes of comparison the annual average areas and yields for the five years 1915-19 (1915-16 to 1919-20 for the southern hemisphere) and the areas and yields of 1921 in the form of percentages of 1920 (1920-21) and of the five-year averages. Owing to the changes in territorial distribution consequent upon the war, it is not possible to give the five-year averages in the case of certain countries, as for instance Hungary, Latvia, Poland, Roumania and Czecho-Slovakia in the case of wheat. Therefore the plan adopted is to give two separate totals (1) for all the countries for which the data are complete, including the five year averages, and (2) for all the countries for which the data are complete in respect of the two years 1920 and 1921.

Wheat.—For 33 countries the production of wheat in 1921 was 2,751,330,000 bushels from 191,572,000 acres, as compared with 2,660,132,000 bushels from 188,640,000 acres in 1920, and 2, 599,902,-000 bushels from 186,965,000 acres, the five year-average. The area under wheat in these countries in 1921 was 1.5 p.c. above that of 1920, and 2.5 p.c. above the five-year average; the yield in 1921 was 3.4 p.c. above that of 1920 and 5.8 p.c. above the five-year average. The average yield per acre was in 1921 14.3 bushels as compared with 14.1 bushels in 1920 and 13.9 bushels, the five-year average. Adding the five countries (Hungary, Latvia, Poland, Roumania, and Czecho-Slovakia) the production for 38 countries is 3,129,604,000

bushels from 204,984,000 acres, as compared with 2,945,338,000 bushels from 199,775,000 acres in 1920, an increase for area of 2.6 p.c. and for yield of 6.2 p.c. as compared with 1920. The average yield per acre for the 38 countries is 15.3 bushels, as against 14.7 bushels in 1920.

Rye.—In 19 countries the production of rye was in 1921, 540,298,000 bushels from 25,628,000 acres, as against 437,248,000 bushels from 24,480,000 acres in 1920 and against 471,886,000 bushels from 24,954,000 acres, the annual averages for the five years 1915-19. (1915-16—1919-20). The area was therefore 4.6 p.c. above that of 1920 and 2.7 p.c. above the five-year average; the yield in 1921 was 23.6 p.c. above that of 1920 and 14.5 p.c. above the five-year average. The average yield per acre was in 1921, 21.1 bushels, as against 17.9 bushels in 1920 and 18.9 bushels, the five-year average. Including the six extra countries, making 25 in all, the yield was 804,342,000 bushels from 39,388,300 acres in 1921, as against 581,454,000 bushels from 36,596,300 acres in 1920, the percentage increase being 38.3 for production and 7.6 for area. The average yield per acre for the 25 countries was 20.4 bushels in 1921 as against 15.9 bushels in 1920.

Barley.—In 27 countries the total production of barley in 1921 was 677,261,000 bushels from 30,082,000 acres, as against 700,354,000 bushels from 30,794,000 acres in 1920 and 692,651,000 bushels from 30,517,000 acres, the five-year average. As compared with 1920 the acreage in 1921 was 2.3 p.c. less, and as compared with the average it was 1.4 p.c. less; the total yield was 3.3 p.c. less than that of 1920 and 2.2 p.c. less than the average. The average yield per acre was 22.5 bushels as against 22.7 bushels in 1920, and for the five-year average. Adding the seven extra countries, the total production in 1921 for 34 countries amounted to 1,076,746,000 bushels from 48,651,000 acres, as against 1,107,200,000 bushels from 49,730,000 acres in 1920; the acreage was thus 2.2 p.c. and the yield 2.8 p.c. less than in 1920. The average yield per acre was for the 34 countries, 22.1 bushels in 1921 as against 22.3 bushels in 1920.

Oats.—In 26 countries the production of oats in 1921 was 2,526,313,000 bushels from 95,274,000 acres, as against 3,079,745,000 bushels from 91,902,000 acres in 1921, and 2,851,385,000 bushels from 88,371,000 acres, the five-year average. The area was 3.7 p.c.

above that of 1920 and 7.8 p.c. above the average, whilst the yield was 18 p.c. below that of 1920 and 11.4 p.c. below the average. The average yield per acre was 26.5 bushels in 1921 as against 33.5 bushels in 1920 and 32.3 bushels, the five-year average. Adding the five extra countries the total yield for the 31 countries was 2,835,487,000 bushels from 105,611,000 acres in 1921, as against 3,320,278,000 bushels from 101,493,000 acres in 1920, the area being 4.1 p.c. more, whilst the yield was 15 p.c. less than in 1920. The average yields per acre were 26.8 bushels in 1921, as compared with 32.7 bushels in 1920.

Corn.—Fifteen countries produced 3,283,035,000 bushels from 112,701,000 acres in 1921, as against 3,432,931,000 bushels from 110,698,000 acres in 1920, and 3,421,186,000 bushels from 115,316,000 acres the five-year average. The area was 1.8 p.c. above that of 1920 and 2.3 p.c. below that of the average, the yield was 4.4 p.c. below 1920 and 4 p.c. below the average. The average yield per acre was 29.1 bushels in 1921, as compared with 31 bushels in 1920 and 29.7 bushels the five-year average. Adding the three countries of Hungary, Poland and Czecho-Slovakia, the total production in 1921 for the 18 countries was 3,322,488,000 bushels from 115,213,000 acres in 1921, as compared with 3,493,817,000 bushels from 113,192,000 acres in 1920, the yield being 4.9 p.c. less on an area 1.8 p.c. more. The average yield per acre for the 18 countries was 28.8 bushels, as against 30.9 bushels in 1920. Of the total area under corn in 1921 103,850,000 acres, or 90 p.c., were in the United States.

Potatoes.—The yield for 23 countries was 2,539,626,000 bushels from 19,956,000 acres in 1921, as against 2,826,170,000 bushels from 19,310,000 acres in 1920 and 2,525,143,000 bushels from 18,641,000 acres, the five-year average. The acreage in 1921 was 3.3 p.c. above that of 1920 and 7 p.c. above the average; the yield was 10.1 p.c. below that of 1920 and 0.6 p.c. above the average. The yield per acre was 127.3 bushels in 1921, 141.1 bushels in 1920 and 135.4 bushels, the average. Adding the four countries of Hungary, Latvia, Poland and Czecho-Slovakia, the total for the 27 countries was 3,361,556,000 bushels from 27,079,000 acres in 1921, as against 3,764,641,000 bushels from 25,619,000 acres in 1920, the acreage in 1921 being 5.7 more and the yield 10.7 p.c. less. The average yield per acre for the 27 countries is 124.1 bushels, as against 146.9 bushels in 1920.

World's Statistics of Farm Live Stock.—Table **57** shows the numbers of farm live stock (horses, mules, asses, cattle, sheep, goats and swine) in the principal countries of the world, as derived from the International Year Book of Agricultural Statistics, 1909-1921, which was issued in 1922 by the International Institute of Agriculture. In this table a distinction is made between countries of the British Empire and those of the rest of the world. The numbers are compared for the two dates of 1911 or nearest year and 1921 or nearest year. The letter *E* signifies an annual or other estimate, and the letter *C* stands for Census. For countries whose boundaries have been affected by the war, the numbers of live stock for the second of the two periods do not relate to the same territories as for the first period. Where this is so the fact is indicated by printing the names of the countries in italics. For these countries the increase or decrease shown may be due rather to the alteration of territory than to actual change, and it is not possible to distinguish between the two causes. Where the data are incomplete, or where the figures for the two years are not comparable for reasons other than alteration of territorial boundary, the figures are printed in italics and are not included in the totals.

In Table **58** the totals for the British Empire are compared for the two periods, and the proportion that each description bears to the world's total is also shown. The list of countries in the British Empire is much more complete than that given in the similar table appearing on pp. 269-271 in the Canada Year Book of 1920. It includes not only India and the large self-governing Dominions, but also the great majority of the Crown Colonies and other British Possessions in various parts of the world. It will be noticed that horses, asses and cattle show increases of 14.2, 12.6 and 23.1 p.c. respectively, but that the other descriptions show decreases, mules of 18, sheep of 11.4 ,goats of 23.4 and swine of 6.3 p.c. For horses the British Empire is shown to possess 10.2, for asses 24.1, for mules 3.2, for cattle 37.8, for sheep 44.9, for goats 58.3, and for swine 6.2 p.c. of the totals for the world, so far as data are available to give approximate comparisons for the two periods.

Table **59** gives the world's totals for each description of live stock for the two periods. According to this table the world's totals have increased in the case of asses by 7.1, mules by 19.6, and cattle by 5.7 p.c., whilst decreases have occurred in the numbers of horses by 11.8, of sheep by 16.6, of goats by 13.5, and of swine by 11.4 p.c.

In addition to the ordinary descriptions of farm live stock, the International Year Book shows that buffaloes are maintained in 17 countries, the largest numbers being in India 21,421,993 (1921), Siam 2,508,164 (1920), Egypt 645,537 (1921), the Philippine Isles 1,388,244 (1919), and the Dutch East Indies 3,273,696 (1918). Of camels maintained in 19 countries, the largest numbers are in India, 549,351 (1920), French West Africa 102,367 (1921), Kenya 103,152 (1920), Egypt 145,008 (1921), Algeria 197,216 (1915), Morocco 86,000 (1921), Tunis 170,606 (1919), and Italian Somaliland 2,101,-178 (1920).

57.—Numbers of Farm Live Stock in the Principal Countries of the World, dates nearest 1911 and 1921.

(Italics indicate incomparability of data at the two periods.)

AGRICULTURAL EXPERIMENT STATIONS OF CANADA.

Dominion Experimental Farms and Stations.

Central and Branch Farms.—Inaugurated in 1886 by Act of Parliament, the Dominion Experimental Farms system was at first made up of the Central Farm at Ottawa and four branch Farms: one at Nappan, Nova Scotia, for the Maritime Provinces; one at Brandon for Manitoba; one at Indian Head for the Northwest Territories and one at Agassiz for British Columbia.

The opening up and rapid settlement of the Dominion have led to a corresponding increase in the number of Experimental Farms and Stations[1]. These with the two Tobacco Stations now total 24, with a total acreage of 12,484, as compared with the original five Farms, having a total acreage of 3,472, as established in 1886. Table **60** shows the present number of Farms and Stations with the acreage of each and the date of establishment.

[1]The five original farms established in 1886 are known as "Experimental Farms"; those added since are styled "Experimental Stations." No distinction in the work is expressed by these titles.

60.—Dominion Experimental Farms and Stations, 1921.

Farm or Station.	Province.	Acreage.	Date established.
Central Farm, Ottawa	Ontario	467	1886

Summerland Station	British Columbia	550	1914
Agassiz Farm	British Columbia	1,400	1886
Sidney Station, Vancouver Island	British Columbia	125	1912

In addition there are eight sub-stations, viz: Salmon Arm, B.C.; Swede Creek, Yukon Territory; Fort Vermilion, Grouard and Beaverlodge, Alberta; and Forts Smith, Resolution and Providence, Northwest Territories. Experimental work under the Division of Illustration Stations is conducted on 12 farms in Saskatchewan, 12 in Alberta, seven in British Columbia, 32 in Quebec, 10 in New Brunswick and 11 in Nova Scotia.

Organization of the System of Experimental Farms.—The Central Farm at Ottawa, as its name implies, is the centre or headquarters of the system. Thereat are situated the Director, having control and general supervision of the whole, and the chief technical officers, having charge each of his special line of work, both at the Central and Branch Farms. At Ottawa, the policy to be pursued throughout the system is settled by agreement after discussion by the Director, the technical officers and the superintendents on whose branch farms the work is to be conducted. The technical staff at Ottawa supervise the actual experimental work at the Central Farm. At the branches, the superintendents are in charge of the carrying out of the various lines of general experiment and also conduct experiments which are of local importance.

The Divisions at Ottawa, which also represent the different lines of work carried on throughout the system, and which have each a technical officer in charge, are as follows: (1) Animal Husbandry; (2) Bees; (3) Botany; (4) Cereals; (5) Chemistry; (6) Extension and Publicity; (7) Economic Fibre Production; (8) Field Husbandry; (9) Forage Plants; (10) Horticulture; (11) Illustration Stations; (12) Poultry and (13) Tobacco. Briefly the main lines of the work of these Divisions are as follows:—

Animal Husbandry.—This Division comprises work with beef cattle, dairy cattle and dairying, horses, sheep and swine, and undertakes experiments in the breeding, feeding, housing and management of each of these classes of live stock.

Bees.—The Bee Division covers the breeding, feeding and manipulation of bees, and the study of bee products, including their marketing.

Botany.—The work of this Division falls into two classes of Economic Botany and Plant Pathology. The former includes the study of medicinal, poisonous and economic plants. Different varieties and strains of fibre plants are also studied, and special attention is given to the life history and control of weeds. The Division has also charge of the Arboretum at the Central Farm. In Plant Pathology, in addition to the pathological laboratory at Ottawa, there are laboratories at Charlottetown, P.E.I., Fredericton, N.B., St. Catharines, Ont., Brandon, Man., Indian Head, Sask., and Summerland, B.C. Investigations are being conducted into diseases affecting forest trees, fruit trees, cereals, small fruits, potatoes, vegetables and tobaccos.

Cereals.—In the Cereal Division, the work comprises the production, by cross-breeding and selection, of new varieties of grains and the testing of these as to their suitability for various parts of Canada. Approved varieties are grown on a larger scale, and samples are distributed free to applicant farmers. Among the more recent varieties produced in this Division and now widely grown in Canada are the Arthur pea and the Huron, Marquis and Prelude wheats. Two interesting varieties now being introduced are the Ruby wheat, ripening not quite so early as Prelude but yielding better, and the Liberty Hull-less oat, which should greatly widen the field of usefulness of this cereal and simplify the processes of its manufacture into food for man and beast. The Division also carries on extensive milling and baking tests.

Chemistry.—The work of the Division of Chemistry comprises the analysis of fodders and feeding stuffs, fertilizers, soils, well waters, insecticides, fungicides, etc. It also assists other Divisions in chemical problems and does a large amount of analytical work for other branches of the Department and for military and civilian use abroad. Field tests with various kinds and quantities of fertilizers are carried on by this Division at a number of the branch farms and stations.

Extension and Publicity.—This Division acts as a connecting link between the Experimental Farms and the farmer by making the work of the former as widely known as possible. Two chief means used are the placing of an exhibit at as many fairs as possible each year and the extension of the departmental mailing lists.

Economic Fibre Plants.—The Division studies the areas in Canada suitable for fibre production, the best varieties and strains of seed of fibre plants, cultural methods, harvesting, retting and

scutching processes, etc. Chiefly for demonstrational purposes, the Division is operating at Clinton, Huron County, Ontario, a leased commercial flax mill.

Field Husbandry.—This Division tests or applies, under field conditions, the results obtained by other Divisions more directly engaged in scientific research. Some of the main lines of work under way are tests of fertilizers, methods of drainage, rotations and cultural methods. Data of cost of production of field crops are gathered in connection with this work.

Forage Plants.—The Division has for its work the variety testing of grasses, leguminous forage plants, field roots and Indian corn; plant breeding with these; the collection of genera and species likely to be of value as forage plants; the study of the possibilities and methods of growing root seed, including sugar beets, in Canada, and the distribution for trial of seed of varieties newly obtained and not available commercially.

Horticulture.—The work of the Division of Horticulture falls under four main heads: vegetable gardening, orcharding and small fruits, ornamental gardening and plant breeding. In the three first named, the testing of varieties is a main feature, with a view to ascertaining the hardiest, earliest, best-yielding and most disease-resistant sorts. In plant breeding, the aim is the improvement of existing sorts by cross-breeding. Greenhouse work is also given special attention at Ottawa. Canning experiments and demonstrations are carried on.

Illustration Stations.—This Division forms another connecting link between the Experimental Farms and the farmer. These Stations are now 84 in number. Each is located on the farm of a representative farmer, who does the work according to directions framed to illustrate the best rotations, the best varieties of crops, and the best cultural methods, as determined by the work of years on the Experimental Farms.

Poultry.—The scope of work of the Poultry Division has been greatly extended during the last few years. It now covers the following main lines of investigation: artificial and natural incubation, poultry breeding, systems of breeding and rearing, production of heavy-laying strains, feeding for eggs and table and housing of poultry. Poultry survey work, i.e., the endeavour to get groups of farmers in various localities to keep accurate records of their poultry costs and returns, is already showing results in the better housing, breeding and care of the farm flock. Egg-laying contests and record of performance work are carried on.

Tobacco.—The Tobacco Division deals with the breeding, variety tests and cultural methods, the warehousing and marketing of tobacco. A complete analysis of the soils of the tobacco-producing regions of Canada is being made. During the growing season, inspectors

examine the tobacco fields of as many growers as possible, with a view to suggesting the best cultural methods and means of combating diseases and insect pests.

In addition to the work done by the Division of Extension and Publicity and Illustration Stations, the results of the work of the Experimental Farms are made available to the farmer (1) by correspondence; (2) by publications; (3) by "Seasonable Hints", now in its seventh year, a 16-page pamphlet brought out every four months, with a circulation of above 300,000; and (4) by articles in the press. The Farm officers devote considerable time each year to lecturing, demonstrating, judging at fairs and assisting at Short Courses in Agriculture. Excursions to the various farms are also a valuable means of bringing the work to the attention of the farmer.

Nova Scotia.

College of Agriculture, Truro.—About 430 acres are devoted to general farming, gardening and investigations. Conducted primarily as a college and distributing station for pure-bred live stock and seeds, investigational work does not occupy so prominent a position as it does at a purely experimental station, Nevertheless, practical experiments are being carried on amongst which the following are the most important. Ten years' experiments with ground limestone have given variable results, but the clover catch has been markedly improved on the poorer lands. Club root in turnips, cabbage, etc., has been almost perfectly controlled. Upon a run-out farm purchased in 1917, experiments are being conducted with basic slag, acid phosphate, bone meal, ground limestone and with the addition to all these of nitrate of soda and sulphate of ammonia. On the same land an experiment has been established to ascertain the returns of potatoes from applications of potash. Also high grade slag with a large percentage of citric soluble phosphoric acid is being tested against lower grade slag with little or no citric soluble phosphoric acid—the product of open hearth furnaces. On all these lands no barnyard manure is being used; and an attempt is being made to demonstrate the possibility of bringing in land by the use of commercial fertilizers and of a triennial rotation during which a clover sod is once ploughed under. A permanent pasture experiment was begun ten years ago to determine the value of top dressing with basic slag, acid phosphate and wood ashes. Experiments to determine the fertilizing value of a crude salt mined at Malagash have given good results for mangolds and in some cases also for grain crops. Three classes of silage crops are being tried under identical conditions, viz., corn, sunflowers and O.P.V. (the College name for a mixture of oats, peas and vetches). The value of the O.P.V. mixture is now thoroughly proved under Nova Scotia conditions. Sunflowers have given good results for two years; but corn has proved very variable. Field and garden experiments have shown good results from the use of home grown oats, wheat, turnips and tomatoes, as compared with seed of these crops grown elsewhere. Experiments have been begun

in the control of the cabbage root maggot, and with insects affecting orchard fruits, carrots and other vegetables. The cabbage root maggot is now perfectly controlled, but further work remains to be done with other root and vegetable pests. In the Poultry Department experiments are being conducted with various kinds of feed, with the use of electric light in laying pens during the winter and with various strains of poultry. A Nova Scotia poultry laying contest is being conducted for the third year. Details of the College experimental work, including results obtained, are published in the Annual Report of the Secretary for Agriculture for the province. The College itself enrols about 100 students annually in its regular course, and from 300 to 500 annually in various short courses. A College prospectus, annually issued, contains complete accounts of the nature of the studies in these courses.

Quebec.

Macdonald College, Ste. Anne de Bellevue.—The College is situated about 20 miles west of Montreal and is incorporated with McGill University. The College property comprises 786 acres divided as follows: main farm, 584 acres; cereal husbandry plots, 75 acres; poultry department, 17 acres; orchard, 35 acres; vegetable gardens, 25 acres; the campus, including driveways, lawns, trees, shrubs, flower beds, school garden and recreation fields for students of both sexes, 50 acres. The agricultural engineering, animal husbandry, bacteriology, botany, cereal husbandry, chemistry, horticulture, physics, poultry, zoology and entomology departments are all well equipped for the numerous researches and experiments under way. In the *School of Agriculture*, the courses offered include 4-year courses, leading to the B.S.A. and B.Sc. in Agr. degrees, a 4½ months winter practical course for farmers and farmers' sons, and various short courses. Postgraduate work can be taken in cereal husbandry, entomology, plant pathology, bacteriology, etc.—the higher degrees offered being M.S.A., M.Sc. and Ph.D. In the *School of Household Science*, the courses include a 4-year course, leading to the degree of Bachelor of Household Science, a 2-year institution administration course, a 1-year homemaker course, three short courses each of about 3 months duration in household science, etc. In the *School for Teachers*, courses, under the Protestant Committee of the Council of Public Instruction of the Province of Quebec, are offered leading to model, kindergarten and elementary diplomas. The teaching and experimental staff of the College consists of about 60 members. The total enrolment for 1920-21 was 486. More complete information respecting the work of the College will be found on record in the Canada Year Book of 1916-17, pp. 241-242, and 1918, pp. 235-237. The annual report of the College and the annual announcement should be consulted.

Oka Agricultural Institute.—Situated on the Lake of Two Mountains, about 20 miles from Montreal, the Oka Agricultural Institute is one of the oldest experimental farms in Canada. It was

affiliated to the Laval University of Montreal (now University of Montreal) on March 25, 1908. The total area of the farm comprises 1,800 acres, including all kinds of soil. Horticulture holds an important place. The area devoted to fruit trees is about 40 acres, and includes 4,000 trees (apples, cherries, pears and plums) grown according to the most recent methods. Special attention is given to the breeding of live stock. The dairy herd is of considerable importance and has been entirely formed at the Institute itself. Official milk records begun in 1918 have already resulted in the registration of 37 animals in the "Record of Performance", with an average yield exceeding 10,000 lb. of milk. The raising of swine, poultry and bees is also practised. The poultry houses shelter thousands of birds, amongst them the famous hen "Chantecler", bred by the poultry manager and registered in the United States Standard of Perfection in 1921. Mention should also be made of the modern rabbit hutch 70 ft. x 13 ft., probably unique of its kind in Canada. The Institute can accommodate about 150 indoor students. The present curriculum includes (1) a scientific course of four years leading to the University degree of B.S.A.; (2) a practical course of two years for young men less advanced, embracing all the principal agricultural subjects, such as general agriculture, cereals, fodder plants, rural and hygienic construction, machines and motors, the cultivation of fruits and vegetables and the breeding and utilization of farm live stock. The famous Oka cheese (Port du Salut) made at this Institute is widely known thoughout the North American continent.

School of Agriculture, Ste. Anne de la Pocatière.—This school, with accommodation for 125 boarders, is situated on the southern slope of a hill dominating a farm of nearly 600 acres. Within one mile of the Intercolonial Railway and on the Quebec-Rivière-du-Loup line, it is easily accessible, and attracts thousands of visitors, who seek agricultural information from both the School and the Dominion Experimental Station, which is not more than a mile from the village. The students of the School are divided into (1) those taking a four-years' agronomic course, and (2) those receiving special practical training for two years. The School is affiliated to Laval University, Quebec, which awards the degree of B.S.A. (Bachelor of Science in Agriculture) to successful students of the first class, whilst those in the other receive a Certificate of Agricultural Proficiency (Brevet de Capacité Agricole). Lectures in adjacent parishes are frequently given by the School professors, who also conduct agricultural pages in two of the largest provincial weeklies for the extension of new agricultural information. Cultural experiments are also undertaken at the School, and bulletins are published.

Ontario.

Ontario Agricultural College and Experimental Farm, Guelph.—The College and Experiment Station were established in 1874 to train young farmers in the science and practice of agriculture and to conduct agricultural experiments for the benefit of the

province. The land property consists of a little more than 700 acres of average loam soil. The farm property consists of 500 acres; experimental plots of about 100 acres and campus and woodlots form the remainder. The growth of the institution as an educational centre has been very rapid. Academic work at the present time requires the space and equipment of sixteen large buildings for dormitories, class rooms and laboratories. Courses offered include a four-year course for the degree of B.S.A. (Bachelor of Science in Agriculture), a two-year course for the Associate Diploma, winter courses for farmers and farmers' sons, summer courses for teachers of the province and domestic science courses at Macdonald Institute. The teaching and experimental staff consists of about seventy-five members. In 1874 the College opened with 28 students. The total enrolment in long and short courses in the academic year 1920-21 was 2,268. More complete information respecting the researches and experimental work undertaken at the College will be found on record in the Canada Year Book of 1916-17, pp. 243-245, and 1918, pp. 238-241. Also reference may be made to the Forty-seventh Annual Report of the College, covering the year 1921.

Manitoba.

Manitoba Agricultural College, Winnipeg.—Field husbandry experiments are conducted in three divisions: (1) Forage Crop Improvement; (2) Cereal Crop Improvement; and (3) Soil and Crop Management. The work of the Forage Crop Improvement Division has for its object the production and improvement of plants suitable under Manitoba conditions for pasture and hay and fodder purposes. Varieties and strains of forage crops have been imported from the United States and European countries, and improvement is being obtained by selection and hybridization. The major investigations are being conducted with alfalfa and red clover, but some work is also being done with sweet clover, timothy, western rye, bromes, meadow fescue and meadow foxtail. Profitable results have been obtained in the improvement of fodder corn, especially by securing early maturing strains. In the Cereal Crop Improvement Division, the work consists of the testing and classification of cereal varieties with a view to standardization. The crops under study are wheat, oats, barley, flax, spring and fall rye, peas and buckwheat. Introductions of cereals have been made from various parts of the world, and selections have been made which promise to be of value. Hybridization for improvement is also followed, and some promising crosses are now under test. In the Soil and Crop Management Division the projects include soil renovation and soil cultivation experiments, experiments in cereal crops, perennial and annual forage crops, hoed crops and cropping sequence. Work is also being done in silage and in ascertaining the carrying capacity of the grasses and clovers when used for pasture.

The Departments of Botany, Horticulture, Animal Husbandry, Physics, Chemistry and Engineering are also doing considerable investigational work.

SASKATCHEWAN.

University of Saskatchewan, Saskatoon.—The College of Agriculture has over 1,300 acres of land at the University and another 560 acres about 35 miles distant which were bequeathed to the College by a pioneer settler, an ex-student of the University of Cambridge, England. Of the 1,300 acres, 210 acres are set aside for experimental work in field husbandry and horticulture. Two hundred and seventy acres of prairie were purchased in 1918, 100 acres of which have been broken for the Field Husbandry Department. The remaining 800 acres are operated as a general farm with great diversification of crops. The buildings, paddocks, etc., are located on an adjoining half section of land designated as the campus or building plot. The College offers a four year course leading to the Degree of Bachelor of Science in Agriculture (B.S.A.), and a three year associate course for farmers' sons intending to make farming their life work. Short courses in general agriculture, tillage, crops, live stock, poultry, dairying and engineering, are held for adult farmers during the winter months, both at the College and at various points throughout the province.

Practical experiments are undertaken in the departments of field and animal husbandry, as well as a variety of scientific investigations in the departments of chemistry, physics, biology, engineering, etc.

ALBERTA.

College of Agriculture, Edmonton South.—A College of Agriculture has been established at the University of Alberta, Edmonton South. Students completing two years at any of the six provincial Schools of Agriculture (situated at Claresholm, Olds, Vermilion, Gleichen, Raymond and Youngstown) enter the College for a three years' course leading to the degree of Bachelor of Science in Agriculture. At these Schools various experiments are in progress as described in the last edition of the Year Book, 1920, p. 286. At the College itself numerous agricultural experiments are also being conducted, including the following tests: Determination as to whether the present varieties of wheat, oats, barley and peas are suitable for the Park Belt sections of Alberta; breeding and selection of promising varieties of wheat for earlier maturity combined with high milling qualities; the testing of alfalfas, red clover, sweet clover and alsike for winter hardiness and of sweet clover in the Open Plains sections to determine its drought hardiness; varieties of corn and sunflowers for fodder; relative suitability of corn and sunflowers for the Park Belt; selection of a suitable grain corn for the dry sections; growth of alfalfa and sweet clover for hay and seed; nurse crops with clover and timothy; pasturing of dairy cows and other cattle; utilization of the best native grasses of Alberta; hay and pasture production; effects of frost on grain; production of alfalfa seed; factors of hardiness in winter wheat; sunflowers; potatoes; seed production; various experiments with cattle, sheep and swine. A start has been made in a definite soil survey of the province, beginning with the soil-blown area of the south.

British Columbia.

Department of Agriculture.—The experiments conducted by the Department of Agriculture include investigations in the three branches of Horticulture, Plant Pathology and Soils and Crops. Experiments in the control of the Strawberry Root Weevil (*Otiorhynchus ovatus*, Linn.) have been conducted during three years. The data obtained have been very satisfactory, and it is intended to continue the work. Three years of experiments for the control of Anthracnose (*Neofabræa malicorticis*) have demonstrated the advisability of fall spraying with Bordeaux mixture before fall rains begin. Demonstration work in orchard cover crops is being carried on both in the Kootenays and the Okanagan. The work in the Kootenays has been confined principally to the use of vetches. In the Okanagan valley vetches were first used and followed by alfalfa, particularly in places where the amount of water could be obtained that would insure a satisfactory catch of alfalfa. Spraying experiments for the control of Blister Mite have been carried on during the season of 1921 with satisfactory results. These will be continued during the season of 1922, and the best type of spreaders to use in commercial sprays will also be inquired into. An investigation was conducted during 1921 to ascertain the most prevalent types of potato disease in eight different districts. The results suggest that owing to the low percentages of leaf roll and mosaic in the province as a whole, there is nothing to prevent the establishment of a successful seed potato industry. The investigation was conducted in conjunction with the establishment of a seed potato certification system by the Soil and Crop Division. Agricultural surveys conducted during 1921 were designed to obtain information upon soil and climatic conditions in relation to the most suitable types of farming.

University of British Columbia.—Considerable progress has been made with the clearing and preparation of land for experimental and general farm purposes. The investigational results obtained by the Departments of Agronomy and Horticulture are becoming increasingly valuable, especially for farmers and gardeners cultivating upland coast soils. In the Department of Animal Husbandry, excellent foundation stock has been purchased, consisting of Jerseys, Ayrshires, Shorthorns and Herefords. The University has also acquired good Yorkshire and Berkshire pigs and Southdown, Shropshire and Oxford Down sheep. Seven Clydesdale mares formerly at Colony Farm now form the horse-breeding nucleus. Departments of dairying and poultry have been organized, and are carrying on investigational and instructional work. In addition to the teaching and investigational work at the University, the members of the Faculty of Agriculture, in co-operation with the Dominion and Provincial Governments, have organized and conducted considerable extension work throughout the province.

FUR TRADE.

From about the year 1500 Basque and Breton fishermen came to Canada to fish and traded for furs in their spare time. As the fashions at the French court demanded more and more furs, adventurers came for the fur trade exclusively. Pont-Gravé and Chauvin built Tadoussac in 1599 as a centre for trade with the Indians of the Saguenay and, when trade routes were found farther inland, Quebec and Montreal were built as trading posts. The French government from the first granted monopolies of the fur trade, always on the condition that the company should bring to Canada a stated number of settlers. But settlement and fur trade could never be equal powers—settlement by driving fur-bearing animals farther afield made trading increasingly expensive, and so a company would make hay while the sun shone and would try to keep the sun shining by preventing information as to its operations from reaching France. The de Caen Company sent yearly to France from 15,000 to 20,000 pelts. The great profits of the fur trade, together with its freedom and romance, took all the adventurous from the rational pursuits of a settler. Trade spread west and south by the river routes and convoys brought the furs yearly to Montreal and Quebec.

In the meantime, English navigators had been seeking a North-west Passage to the Orient. By 1632 their efforts came to an end with little practical result, as it seemed, but Hudson bay had been accurately charted, so that when the first English fur-trading ships came some thirty years later, they sailed by charted routes to a safe harbour. The first expedition came at the instigation of Radisson and Groseilliers, two French coureurs de bois who had travelled in the rich fur country north of Lake Superior. They had sought aid in France, but being repulsed turned to England. The charter of the "Adventurers of England trading into Hudson's Bay" was obtained in 1670 by Prince Rupert, who became first governor of the Company (whence the name Rupert's land). In 1676, merchandise costing £650 was sent to the Bay and the furs got by barter were sent to England and sold for £19,500. The dividend on the stock of £10,500 was sometimes as high as 100 per cent; then during the struggle with the French beginning about 1685 no return was made, but with the English victory, the Company resumed payments, usually amounting to 20 per cent per annum. Forts were built on Hudson bay and James bay at the mouths of rivers, and the Company, in the indolent attitude of the monopolist, waited for furs to be brought to its posts.

With the outcome of the Seven Years' War, fur trade from the south passed out of the hands of the French and until 1771 the English were rediscovering the old French routes to the West. A period of open competition followed. The discoverer of a new fur district was soon followed by competitors who undersold him and were undersold by him until some or all were ruined and left for new fields. "The goods were bartered away for a consideration below their values.... ....the Indians were corrupted and the English character was brought into contempt". At length, the competitors would join

their interests, forming a concern subject to general rules. Such a concern was the Northwest Company, founded in 1783-4, with a stock divided into 16 shares. No capital was deposited, but each party supplied a proportion of the articles needed for trade. The Northwest Company pursued a vigorous policy, founding posts to control all the best fur districts. The Hudson's Bay Company felt the keenness of the competition, and was forced to abandon its ancient policy of waiting for furs to be brought to the bay. By 1816 the rivals had absorbed or ruined eleven other partnerships and were themselves on the verge of ruin. Finally in 1821, the two were joined under the name of the older company. The Northwest Company brought with it the control of the Pacific and Arctic watersheds, to be added to the lands draining into Hudson bay, and over the whole region the Hudson's Bay Company secured legal recognition of its monopoly of the fur trade. There followed forty years of great prosperity. "Over 150,000 Indians spent their laborious lives in gleaning the wealth of the forests and streams, and over 3,000 employees took charge of the commodities from the sale of which over 60 per cent dividend was annually distributed in profits". The Company's rights of exclusive trading in Indian territory expired in 1859 and ten years later it surrendered its other privileges. In return, Canada granted £300,000 to the Company, as well as lands about its trading posts, and one-twentieth of the land in the fertile belt between the North Saskatchewan River and the United States boundary. The Hudson's Bay Company thereupon became a trading company with no extraordinary privileges.

Great changes have come over the Canadian fur trade in recent years. During the Great War the important market changed from London to the United States, as is shown in the figures for the war years. Of the $5,100,000 worth of undressed furs exported to England and the United States in 1914, England received $3,000,000; in 1919 out of $13,300,000 worth only $3,700,000 went to England. During the war period, also, Montreal took a position as an international fur market.

Improved methods of capture, together with the advance of settlement, have driven fur-bearing animals farther afield and given them less chance to escape. Close seasons have been declared for Russian sable and Bolivian chinchilla and Canadian beaver, but even this has been insufficient, as is shown by a continued decrease in the numbers of the animals. The fur trade has taken other methods to supply the demand by renaming common and despised furs and by encouraging the use of the furs of domestic animals. About forty years ago, Persian lamb, astrachan and broadtail came into general use, and the increasing demand has always been met, for these are the furs of domestic animals which may be bred under supervision. Of fur-bearing wild animals in Canada, the fox was most suited for domestication, being least disturbed by human beings. The successful breeding of the fox on fur farms came in the period of rising prices after 1890 with the introduction of woven wire fencing. Other animals have been domesticated, though less successfully than the fox—raccoon, mink, martin, otter, skunk, muskrat and beaver. For

1919-20 the total fur production of Canada was valued at $21,387,005 and for 1920-21 at $10,151,594. For the same years the value of the pelts sold from fur farms was $388,335 and $626,900; in both years the large item in the production was silver fox, which, being more valuable as well as more tractable, is most successfully bred. Statistics of the number and value of pelts produced are given by provinces in Table **61** for the year 1919-20 and 1920-21, while the number and value of pelts are given by kinds in Table **62.**

FORESTRY.

Forest Areas of Canada.—Canada's forest resources are included more or less roughly in three areas, (1) the giant fir forest of the Rocky Mountains and the Pacific Coast, (2) the northern coniferous forest, stretching in a wide curve from the Yukon, north of the Great Lakes to Labrador, and (3) the deciduous, hardwood forest, extending from Lake Huron through southern Ontario and Quebec to New Brunswick and the Atlantic coast. Varying precipitation, temperature, and soil are the causes resulting in such a division into forest areas. It is estimated that 932,416 square miles, about one quarter of the total area of the Dominion (3,729,665 square miles) is covered by forests, of which about 390,625 square miles can be considered as containing saw-timber of commercial size. Of this amount, some is at present inaccessible owing to lack of transportation.

Types of Forest Growth.—The most important types of forest growth found in the forests of British Columbia are: (1) Douglas Fir—a strong, hard and light wood highly valued on account of its strength and the large sizes in which it can be obtained. Trees reach heights exceeding 250 feet and diameters exceeding 8 feet. It is an important timber for structural purposes, ties, piles, mine timbers, wood-block paving, etc.; (2) Red Cedar—also a very large type of tree, noted for the durability of the wood, which is light, soft and straight-grained; it is the most important wood in Canada for the manufacture of roofing shingles; (3) Alaska Pine or Western Hemlock—a wood much superior to eastern types of hemlock, extensively used for pulp and structural purposes; (4) Sitka Spruce and Engelmann Spruce—with light, soft, and straight-grained wood, much used in aeroplane manufacture and for pulpwood.

In the northern coniferous forest some of the predominant types are: (1) White Spruce—a soft, light wood found over very wide areas, being excellent material for pulp and for construction work where durability is not important; (2) Balsam Fir—largely used for pulp and found over large areas; (3) Larch or Tamarack—a swamp species, partly destroyed by the larch saw-fly; its wood is much sought after for railway ties and shipbuilding purposes; (4) Black Spruce—the smallest of the spruce species and only used for pulpwood; (5) Jack Pine—found growing on poor sites and following more valuable species after forest fires; (6) Balm Poplar—a widely found, deciduous type, of little commercial value.

Of the most important types found between Lake Huron and New Brunswick, mention may be made of: (1) Yellow Birch—Canada's most important hardwood, used extensively for flooring, cabinet work, handles, etc, as it is hard, stiff, strong and takes a fine polish; (2) White Pine and Red Pine—much used for structural purposes but now almost entirely cut from many wooded districts; (3) Eastern Cedar—a small type much used for shingles, fence posts and railway ties; (4) other hardwoods, including Maple, Elm, Ash, Oak and Hickory.

Forest Industries.—The forests of Canada are mainly owned by the Dominion and Provincial Governments and are leased by them to lumber or pulp companies. During recent years, legislation has made the sawing of logs and the manufacture of pulp in Canada a condition of licenses to cut timber on crown lands, the province of Ontario even insisting on the pulpwood of the crown lands being manufactured into paper within the province. Such regulations, combined with the great natural advantages which Canada's water routes and abundant water power offer to the forest industries, have resulted in great increases in the size and operations of our pulp and paper companies.

The first paper mill in Canada was erected at St. Andrews, Que., in 1803. In 1825 Upper Canada's first paper mill was erected at Crook's Hollow, its owner receiving a bounty from the government for his successful efforts. By 1881 there were 5 pulp and paper mills in the Dominion, with an invested capital of $92,000. By 1920, the number of incorporated companies manufacturing pulp had increased to 100 with a combined capital of $221,472,538 (preliminary figures). Canada's exports of wood, pulp, and paper are next in value and importance to her exports of agricultural products, exports of unmanufactured wood amounting to $116,260,591, of paper to $92,103,307 and of manufactured wood to $75,256,371 in the fiscal year ended March 31, 1921. The United States offers a permanent and convenient market for the greater part of the products of this industry.

In the year 1919, the group of industries using timber and lumber as their chief raw material comprised 4,966 establishments, with a capital amounting to $395,808,490, and a product for the year valued at $354,617,529. These industries paid $12,734,049 in salaries to 8,608 salaried employees, and $82,492,121 in wages to 101,215 wage-earners.

N.B.—Much of the above information is taken from a publication of the Dominion Forestry Branch, Department of the Interior, Ottawa, entitled "The Forests of Canada," in which much valuable material is available.

Statistics of Forest Products.—Up to and including the year 1916 the annual statistics of forest products were collected and published by the Forestry Branch of the Department of the Interior. For the calendar years 1917 to 1920 such statistics have been collected and compiled by the Dominion Bureau of Statistics in collaboration with the Forestry Branch of the Department of the Interior, and have formed part of the annual census of industry. Summarized statistics of the estimated values of forest products are given in Table **63**, while quantities and values of the cut of lumber, shingles and lath are furnished by provinces in Table **64**. Statistics of production in the great pulp and paper industry are presented in Tables **65** to **70**, while the three diagrams on page 316 illustrate graphically by provinces the production in Canada during 1919 and 1920 of (1) pulpwood, (2) wood pulp and (3) paper. To the statistics of production are

appended two tables showing (Table **71**) the quantity and value of exports or wood pulp by countries, for the fiscal years 1916-1921, and (Table **72**) the quantity and value of wood, blocks and other, exported to United States for the fiscal years 1904-1921.

Diagrams Illustrating the Paper-making Industry.

FISHERIES.

The Early Fisheries.—Sea fisheries largely depend upon two habits of fish—those of spawning and feeding in their accustomed resorts in estuaries and the open sea. In Canada the feeding grounds are northerly and are remarkable for the coldness and purity of their waters. The earliest frequenters of the "banks", especially of the "Grand Bank", were Breton and Basque fishermen who, according to Fernandez de Navarrete, came in their small vessels before 1502. The fishing was done by hand line from barrels made fast outside of the bulwarks, so that the lines would not foul on the sides of the ship. The vessels remained on the "bank" as long as fine weather lasted, then returned to France with their catches of from 30 to 50 thousand cod. Voyages up and down the coast soon showed that cod were as plentiful inshore as on the outer banks, and so it became common for a crew to anchor in a bay, build a hut on shore and make daily excursions in small boats to the inshore fisheries. Such an establishment was at Tadoussac, founded by Chauvin in 1599. The fish was salted and dried on shore, and at the end of the season was loaded into the ship to be taken to France. Soon the fishermen stayed all winter in America and built the first fishing villages. By the Treaty of Utrecht in 1713 Britain became absolute owner of Newfoundland, excluding France from the rights of fishing and drying fish on certain sections of its coast, but France retained the fisheries of Cape Breton and the Gulf. The Seven Years War put a stop to continuous fishing. At its conclusion, the Robin family of Jersey came to Canada and by gradual acquisition came to control all the former French fishing stations. The firm of Charles Robin and Company devoted itself to the capture of cod, so that until the arrival of the Loyalists all other fish were neglected. Inshore fisheries only were developed, the Labrador coast fisheries being included under this term; no deep-sea fishing vessel put out from Lunenburg, which is now the chief centre of the deep-sea fishery, until 1873.

Methods of Fishing.—The fisheries of Canada are distinguished as Atlantic, Inland and Pacific. Of the annual yield, the Atlantic fisheries give 45 per cent, the Pacific 42 per cent and the Inland 13 per cent.

Sea fisheries are for convenience described as inshore and deep-sea. Of the inshore fisheries those from one to five miles out are frequented by boats carrying two or three men and those twelve to fifteen miles out by small vessels carrying from four to seven men. The fish are largely taken with gill net and trawl. A gill net hangs like a wall in the water, buoyed and weighted to keep it upright. The fish in trying to pass through are meshed by the gills and strangled. A trawl is a line of any length to which are attached at intervals short lines or snoods, each one with a baited hook at the end. The deep-sea fisheries are worked by vessels of from sixty to one hundred tons, carrying from twelve to twenty men. Dories are carried on board which, when the vessel anchors, are sent out with two men in each who use trawls to take the fish—cod, haddock, hake and halibut. The inshore fisheries allow a man to farm as well as fish. This, added

to their greater safety, gives them a following eight times as great as the deep-sea fisheries.

Atlantic Fisheries.—On the Atlantic coast a great proportion of the cod is taken inshore because the fish taken out at sea has to be so heavily salted. During the spring and summer cod fishermen take haddock, splitting and salting it with the rest of their catch. But the important haddock season comes in the autumn when the fish are shipped fresh or else smoked and sold as finnan haddie. Halibut, herring, sardines (young herring) and mackerel are of less importance. Then there are oysters which used to be plentiful anywhere on the coast from Halifax to the Bay of Chaleur, but the production has fallen off from 64,646 barrels in 1884 to 14,526 in 1920. Lobsters, which formerly were little valued, are now, next to cod, the most valuable product of the Atlantic fisheries. This change came in the late 60's with the introduction of lobster canning into Canada. In 1869, 61,000 one pound cans were put up, increasing to 17,000,000 in 1881, following which the production fell to 7,838,352 cans in 1920. The reason for the decrease is found chiefly in the difficulty of enforcing restrictions regarding the capture of undersized or spawning lobsters.

Inland Fisheries.—Of the inland fishes the salmon of Quebec is very important, principally as a game fish. Its habitat formerly extended to the rivers flowing into lake Ontario, but before 1870 it practically ceased to frequent them. Salmon is now found in the rivers from Labrador to the Bay of Fundy. Any financial profit from the fishery comes chiefly from the fees of sportsmen. The most important inland commercial fish is whitefish, which is found in the Great Lakes and lake Winnipeg and its tributaries. When the fisheries were first developed in the Great Lakes, whitefish were so plentiful and so easily captured that large quantities were used as fertilizer. Overfishing showed its effect, for from 7,595,690 in 1890 the Canadian Great Lakes' catch fell to 2,895,170 pounds in 1905. The catch has risen to 6,978,600 pounds for 1920, the principal increases being shown for lake Erie and lake Ontario, which were stocked from the Sandwich hatchery. To the west and north of lake Winnipeg are great inland fisheries abounding in whitefish, dore and lake trout, which as yet are very slightly developed.

Pacific Fisheries.—The conformation of the British Columbia coast is especially suitable for fisheries. The shore line is made irregular by many deep fjords and estuaries, and from the coast a feeding ground for fish in the shape of a sea ledge runs out from 50 to 100 miles before dropping away to ocean depths. Before there was any regular settlement in British Columbia, the Hudson Bay Company relied upon dried salmon to support its employees during the winter.

The salmon of the British Columbia coast is not the true salmon, although not unlike it in appearance. The real difference between the two is shown in their spawning habits—the British Columbia salmon never returns to the sea after spawning once, but weakens and dies at the headwaters of the rivers. There are five varieties

of British Columbia salmon. Of these the sockeye is now the chief fish of the canneries, because of its fine quality and its even colour. In the Fraser river the great runs of sockeye distinguish every fourth year as a "big" year, a very striking feature in that river. The sockeye on their way to the Fraser river are caught by American fishermen in Puget Sound. Thus the catch in the Fraser is falling off, but in the northern rivers where there is no interference the runs are fairly uniform. The spring or quinnat salmon follows the sockeye in importance, having been for many years the only Pacific salmon used for canning. The coho, also, has been used for canning, and lately the dog salmon has been salted by the Japanese for shipment to the Orient. The humpback, one of the smaller varieties, is less valued. The great development of the salmon industry has brought about the use of cohoes and humpbacks to eke out the supply of sockeyes in the poor years, and coming, as they do at different seasons, has given more continuous employment to the fishermen. While the Hudson's Bay Company had for more than half a century packed salted salmon for shipment in barrels to Australia, the Sandwich islands, and elsewhere, the first canning on any large scale took place in 1873, when two canneries on the Fraser river packed 8,580 cases. The pack has risen to 1,188,381 cases in 1920, or taking a "big" year, 1917, 1,556,485 cases.

For many years the accessibility of the salmon fishery induced the neglect of all others. About 1890 the fishery for halibut was begun, but in its first years poor transportation facilities prevented it from competing with Atlantic halibut. But from 9,025,182 pounds in 1899 the Atlantic catch fell to 1,690,478 pounds in 1908 and in the same period the Pacific catch rose from 6,877,640 to 17,512,555 pounds. The same methods are used on both coasts, for many of the Pacific coast halibut men formerly operated out of Boston and Gloucester when halibut was more plentiful in those waters. The halibut is a migratory fish, so it is impossible to name any fishery in which it is most abundant.

Fish of less importance are herring, sturgeon, cod and anchovy. Then there is the whale fishery which has been organized in recent years with four stations, two on Vancouver island and two on the Queen Charlotte islands. The yearly catch of about 500 includes whales of many kinds—sulphur-bottom, finback, and humpback with an occasional sperm whale. Whale hunting is carried on in fast boats with Svend Foyn harpoon guns—a method which was introduced from Norway. Every scrap of the whale is used—oil, whalebone, and guano are its products and to an increasing extent, "salted beef".

During the period following 1896, which is generally accounted a period of great industrial expansion, the fisheries of Canada made very slight advances. From $20,407,425 in 1896 their value increased to $29,965,433 in 1910-11, but during the period the number of men in the industry actually fell off. Even before 1896 the salted fish industry had become non-progressive and new developments came only with encouragement to the fresh fish and frozen fish industry. Beginning in 1907 the Department of Marine and Fisheries arranged to

pay one-third of the express charges on less than car-lot shipments of fresh fish from Halifax and Port Mulgrave. Previously the shorter haul from Gloucester and Boston had allowed American fresh fish to enjoy the Canadian market free from competition. As a result, shipments of fresh cod, which in 1900 had been practically nil and only 12,389 cwts. in 1905, advanced to 43,548 cwts. in 1910 and 202,235 in 1918. But following the removal of government aid the shipments have fallen to 166,530 cwts. in 1919 and 118,755 in 1920.

The Government has always pursued the policy of protecting Canadian fisheries. Close seasons were long enforced to prevent the capture of spawning fish or where a bed, say of oysters, is seriously depleted it may be left idle for a period. When licenses are issued occasion is taken to specify the minimum size of the fish to be captured and the size of mesh in the nets. But these regulations have lost much of their efficacy because some of Canada's principal fishing grounds are shared with the United States, whose fishermen do not feel bound to observe the restrictions under which Canadians operate. The full force of fisheries regulation does not extend beyond territorial waters.

Fishing Bounties.—Under what is known as the Halifax Award, made on November 23, 1877, a sum of $4,500,000 was paid by the United States to Canada as compensation for the use of the Canadian fisheries by American fishermen. Later, in an Act of 1882 (45 Vict., c. 18), passed for the development of the sea fisheries and encouragement of the building of fishing vessels, provision was made for distributing annually $150,000 in bounties, representing the interest on the above sum, among the owners of fishing vessels and among the fishermen engaged in fishing from boats in the deep sea fisheries of Canada. An Act of 1891, (54-55 Vict., c. 42), increased the amount to $160,000, the details of the expenditure being settled each year by Order in Council. For the year 1920, payment was made on the following basis: to owners of vessels entitled to receive bounty, $1 per registered ton, not to exceed $80; to vessel fishermen entitled to receive bounty, $7.60 each; to owners of boats measuring not less than 13 feet keel $1 per boat; to boat fishermen entitled to receive bounty, $6.10 each. The claims received numbered 9,671 of which 9,664 were paid as compared with 13,068 received and 13,061 paid in the previous year. The total amount paid was $152,519. Details of the distribution of bounties are given for the years 1917 to 1920 in Table **75.**

Fish Culture.—Government assistance to the fishing industry takes various forms, For many years the government has conducted fish hatcheries with a view to restocking the waters which have been overfished. In 1920 there were in operation 35 main hatcheries, 11 subsidiary hatcheries and 6 salmon retaining ponds, from which the total distribution during the year amounted to no less than 750,386,790 eggs, fry and older fish, including 418,290,750 whitefish distributed mainly in Ontario and Manitoba, but also in British Columbia, and 145,753,600 pickerel, distributed in Ontario and Manitoba. Sockeye salmon to the number of 90,175,369 were distributed in British

Columbia. In the season of 1921 the total distribution had increased to 845,856,651 individuals, mainly fry, including 534,895,800 whitefish, 165,625,000 pickerel and 84,789,624 sockeye salmon. The expenditure for this service in 1920-21 was $364,789.

Stations under the direction of the Biological Board of Canada for the conduct of biological research into the numerous complex problems furnished by the fisheries are established at St. Andrews, N.B., and Nanaimo, B.C., the former having a permanent paid staff of 8 persons, while nearly 20 scientists conducted investigation there in the summer of 1920. Toronto, McGill, Queens, Manitoba, British Columbia and the chief Maritime Province Universities send to both stations able workers, chiefly professors and trained specialists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved method of handling and preparing fish, and numerous other practical problems have been taken up. Scientific memoirs and reports are issued each season.

Transportation and Marketing of Fish.—During the war it became desirable to increase as far as possible the consumption of fish, reserving the less perishable animal foods for export to our allies. The government therefore undertook to provide for the rapid transit of sea fish on its railway lines to the markets of the inland provinces, and to stimulate by a publicity campaign the consumption of fish. Though much was accomplished in this direction, the annual per capita consumption of fish in Canada is even now estimated by the Fisheries Branch of the Department of Marine and Fisheries at not more than 20 pounds, a low figure considering Canada's position as a fish producing country. The Fisheries Branch has made efforts to improve the fast freight service from the Atlantic coast to Montreal and Toronto. Assurances have been given that the Canadian National fast freight from Halifax and Mulgrave will reach Montreal in about 64 hours from Halifax and 72 from Mulgrave, and that Toronto will be reached via the Grand Trunk fast freight within 36 hours from Montreal.

Capital Invested.—In the calendar year 1920 the total capital invested in fishing vessels, boats, nets, traps, etc., used in the fisheries of Canada, amounted to $50,405,478 as compared with $54,694,026 in the preceding year. These figures include, contrary to the practice of former years, investments in fish canning and curing establishments valued at $20,512,265 in 1920 as compared with $23,200,874 in 1919. The decline in values is in both cases due to deflation and the lower valuations set upon property rather than to any actual decline in physical quantity. Of the total for 1920, $25,507,054 was invested in connection with sea fisheries and $4,306,159 in connection with inland fisheries. Table **73** shows the distribution of capital amongst the various descriptions of vessels, boats, nets, traps, etc., used in both sea and inland fisheries, and in fish canning and curing establishments, for

the calendar years 1919 and 1920. A statement of the value of vessels, boats and fishing materials for each of the years 1880 to 1910-11 was given in the Year Book for 1911, page 390. For subsequent years similar information has appeared in the Year Book annually.

Number of Employees.—The total number of persons employed in the fisheries of Canada in the calendar year 1920, as shown by Table **74**, was 75,696 as compared with 86,160 in 1919 and 87,070 in 1918. Of the number in 1920, 49,594 were engaged in sea fisheries, 7,603 in inland fisheries and 18,499 in fish canning and curing establishments.

Production and Value of Fisheries.—The total value of the products of the Canadian fishing industry in the calendar year 1920 was $49,241,339 as compared with $56,508,479 in 1919 and $60,250,544, the largest value on record, in 1918. The decline in 1920 is shown by Table **76** to have been due in the main to decline in quantity rather than decline in price, this decline in quantity being specially noticeable in the case of salmon and cod, while in the case of halibut a decline in value has been due to lower prices.

MINING.

From the point of view of minerals, and the development of mining, Canada may be divided into four great areas, (1) the Maritime Provinces, (2) Ontario and Quebec, (3) the Prairie Provinces, (4) British Columbia.

In the Maritime Provinces the first discoveries of minerals were made by Master Simon, a French mining engineer who, while accompanying the de Monts expedition in 1604, discovered iron and silver in St. Mary's Bay, native copper at cape d'Or, amethysts on the eastern shore of the Bay of Fundy and copper ore at port Mouton. In 1672 Denys mentions the existence of coal in his concession on Cape Breton Island, and in 1677 he was given the right to exact a duty of 20 sous per ton on coal. The deposits of coal in Cape Breton were used during the next century by the French at Louisbourg and the English at Halifax, while the Pictou county deposits were discovered in 1798. In 1827 the mines came into the possession of the General Mining Association, which enjoyed a monopoly of Nova Scotia coal mining until 1858, introducing the best English coal mining methods into Canada. From 1854 to 1866—the years of the Reciprocity Treaty—there was a large exportation to the United States, which afterwards was diverted to the St. Lawrence ports. In 1893, 834,019 tons were mined and in 1920, 6,395,545. There is coal mining in New Brunswick, especially in the Grand Lake district, but the production is relatively unimportant. Iron, which was first extracted in Nova Scotia at Nictaux and Torbrook in 1825, was afterwards found in Colchester County in 1849 and also in Pictou County, where coal is found along with it. The last important mineral of the Maritime Provinces is gypsum, which has been mined since the end of the 18th century in the Nova Scotian fields at Windsor, Chéticamp, Nappan and St. Anne's bay and in the New Brunswick field at Hillsboro. At first, mining was carried on principally in the winter, when the farmers hauled the mineral to the ports for shipment to the New England States. Control of the industry remained in the United States, whither the gypsum is shipped to be refined.

The same rock formation, which in Ontario yields the gold of Porcupine, the silver of Cobalt, and the nickel of Sudbury, passes into northern Quebec, but here the undeveloped state of the country leaves its wealth conjectural. Deposits of bog iron were discovered near Three Rivers in 1667 and opened in 1733, since when they have been worked, although with a lessening production, up to the present time. In Ontario, iron was found in Leeds County in 1800, at Normandale in 1813, and in Michipicoten in 1899. 1843 marks a stage in the history of mining in Ontario, for in that year Sir William Logan made his report on the geology of Ontario, the effect of which was shown in a greatly increased application for prospectors' privileges. Copper was found in 1847 at the Bruce Mines and in 1882 at Sudbury. Although at first copper was thought the chief wealth of the Sudbury mines, as witness the name of the first company—Canada Copper

Company—nickel soon displaced it. Silver Isle was the first important silver discovery in Ontario, producing, between 1868 and 1884, silver to the value of $3,250,000. Silver in Cobalt district was disclosed in 1903 by the construction of the Timiskaming and Northern Ontario Railway. Production rose to 31,507,791 ounces for 1911 since when it has fallen to 11,214,317 ounces in 1919. Gold had been discovered at Madoc in 1866 in what proved to be a small pocket. In 1909 the gold of Porcupine was found and made available by a branch of the Timiskaming and Northern Ontario Railway. Production continues here, especially at the Hollinger mine, which is now the largest gold mine in the world. There are several lesser minerals, among them oil in Ontario, and gold in Quebec. Finally there is asbestos, the presence of which in the Eastern Townships has been known since 1847. No mining was undertaken, however, until 1877. From 1890 to 1895 was a period of experimentation during which a method was found of using the short fibred parts of the mineral. In 1896 there was a production of 10,892 tons, which has risen to 188,687 in 1920.

The Prairie Provinces have a very limited range of important minerals. Natural gas was discovered near Medicine Hat during the construction of the Canadian Pacific Railway. Likewise, in the C.P.R. construction days, coal was found in Alberta, and geological estimates now give the province 87 p.c. of the coal reserves of Canada. The early fields of any importance were at Canmore and Anthracite; subsequent discoveries have shown important deposits at Crowsnest, Bankhead and Drumheller. In Saskatchewan there are lignite fields at Woods mountains and Cypress hills and in Manitoba at Turtle mountain. The coal production of Saskatchewan and Alberta in 1901 was 346,649 tons; in 1906 Alberta alone produced 1,385,000 tons and in 1919, 5,022,412 tons.

The mining district of British Columbia and the Yukon is a continuation of the Cordilleran range which passes through South America, Mexico and the United States and everywhere encloses great mineral wealth. In 1835 coal was discovered in British Columbia, but was practically neglected until, in 1851, mines were opened at Nanaimo, which have been worked ever since. In the late fifties gold was discovered along the Thompson river and in 1858 the famous Fraser river rush took place. In 1861 Cariboo district was reached by the prospectors, and Williams and Lightning Creeks discovered. By 1873 the Cassiar district was opened and still pushing north, prospectors entered the Yukon before 1880. Placer mining in the rich Klondike district was begun in 1894. The peak year for the Yukon was 1900 with a gold production of $22,000,000, but as the cruder methods became less effective, production dropped to $10,500,000 in 1904 and $1,875,039 in 1919. Lode mining had been practically neglected during the period of the gold rushes. The mine of galena on Kootenay lake, which had been discovered by David Douglas in 1825, had been taken up in 1864 by George Hearst of California, but was soon abandoned. The real development of lode mining followed the introduction of railways such as the British

Columbia Southern and the Columbia and Western into southern British Columbia in the late 90's. Lode mining is now principally carried on between the South Thompson and the United States boundary for silver-lead, zinc and copper, and on Vancouver Island and neighbouring mainland for coal and iron.

Mineral Statistics.—The results of the census of mineral production taken in 1911, were published in the Year Book of 1913 (pages 196-199). In the present edition the Canadian statistics given are limited to those of the Dominion Government and of the Departments of Mines of the Provincial Governments. To the statistics of production in this section have been added statements of the imports of Portland cement (Table **104**), of the imports of anthracite and bituminous coal (Table **105**) and of the exports of coal (Table **106**). Also, in view of the coal situation existing in 1922, Tables **107** and **108** have been added, the former showing the annual consumption of coal in Canada since 1886 and the latter the statistics by provinces of the coal made available for consumption in Canada in 1920.

Mineral Production Compared as to Quantity and Value.—Table **87** gives the results of calculations intended to show for each mineral product the increase or decrease in total value for 1920, as compared with 1919, that is due (a) to difference in price and (b) to difference in quantity.

IRON BLAST FURNACES IN CANADA IN 1921—

Of 20 blast furnaces in Canada, 8 were in blast in 1921 for varying periods of time. The total daily capacity of the twenty furnaces was 3,908 gross tons. The companies, with numbers and capacities of furnaces, were as follows:—

Dominion Iron & Steel Co., of Sydney, C.B.: Six completed furnaces; one of 315 tons capacity, two of 230 tons, and three of 215 tons capacity each per day. For the first five months only one furnace was in blast; a second furnace started operations in June and blew out during December, four furnaces being idle throughout the year.

Nova Scotia Steel & Coal Co., Ltd., New Glasgow, N.S.: Two stacks and one set of stoves at Sydney Mines, C.B., with a daily capacity of 223 and 250 tons. Idle throughout the year.

Londonderry Iron & Mining Co., Ltd., Londonderry, N.S.: One furnace of 100 tons daily capacity. Idle throughout the year. Not operated since 1908.

Midland Iron and Steel Co., Ltd., Midland, Ont.: One furnace of 120 tons daily capacity, operated during January, part of February and out of blast for the remainder of the year.

Parry Sound Iron Co., Ltd., Midland, Ont.: One furnace at Parry Sound of 90 tons capacity. Purchased from Standard Iron Co. and being rebuilt. Idle since 1913.

Standard Iron Co., Ltd., Deseronto, Ont.: One furnace at Deseronto of 60 tons daily capacity. Idle throughout the year.

The Steel Co. of Canada. Ltd., Hamilton, Ont.: Two furnaces with a daily capacity of 375 and 230 tons. One furnace remained in blast for the entire year and the other operated part time for the first four months only.

ELECTRIC FURNACES IN 1921—

The Electro Metals Ltd., of Welland, Ont., equipped with 8 electric furnaces, were engaged in producing ferro-silicon of 15 p.c., 50 p.c., 75 p.c., and 80 p.c. grades.

The Algoma Steel Corporation, Sault Ste. Marie, Ont.: Producing spiegeleisen in blast furnaces.

The following firms were also engaged during 1921 in recovering low grade ferro-silicon as a by-product in the manufacture of artificial abrasives in electric furnaces: The Abrasive Co. of Canada, Ltd., Hamilton; The Canadian Carborundum Co., Niagara Falls, Ont.

STEEL FURNACES IN 1921—

The following firms were engaged in producing steel ingots and castings in Canada during 1921:—

The Algoma Steel Corporation, Sault Ste. Marie, Ont.: Basic open hearth steel furnaces, eight of 50, one of 60 and three of 75 G.T. capacity each per heat or melt.

Baldwin's Canadian Steel Corporation, Toronto, Ont.: Nine Heroult electric steel furnaces with a capacity of 6 tons each per heat.

Beauchemin & Fils, Ltd., Sorel, P.Q.: Two Baillot's converters with a capacity of 3,000 pounds each per blow.

Canadian Steel Foundries, Ltd., Pointe St. Charles, P.Q.: One standard Bessemer converter of 1½ tons capacity per blow.

Canadian Steel Foundries, Ltd., Longue Pointe, P.Q.: Two basic open hearth steel furnaces with a capacity of 25 tons each per heat.

Canadian Steel Foundries, Ltd., Welland, Ont.: Three basic open hearth steel furnaces with a capacity of 20 tons each per heat.

Thos. Davidson Mfg. Co., Ltd., Montreal, P.Q.: Four electric steel furnaces with a capacity per heat of 6 tons each.

Dominion Foundries and Steel Ltd., Hamilton, Ont.: Two Heroult electric steel furnaces with a capacity per heat of 6 tons each.

Dominion Iron and Steel Co., Ltd., Sydney, N.S.: Two basic open hearth steel furnaces with a capacity per heat of 100 tons each, and ten B.O.H. steel furnaces with a capacity per heat of 50 tons each.

La Compagnie F. X. Drolet, Quebec, P.Q.: One side blown Baillot converter with a capacity of one ton per blow.

Hull Iron and Steel Foundries, Ltd., Hull, P.Q.: One Heroult electric steel furnace with a capacity of 5 tons per heat; two Tropenas converters with a capacity of 1½ tons each per blow.

Wm. Kennedy & Sons, Collingwood, Ont.: One 4½ ton three phase non-tilting electric furnace.

Manitoba Rolling Mill Co., Ltd., Selkirk, Man.: one B.O.H. steel furnace with a capacity of 10 tons per heat.

The Manitoba Steel Foundries, Ltd., Montreal, P.Q.: One Snyder single phase of 2½ tons capacity per heat.

Nova Scotia Steel and Coal Co., Ltd., Sydney Mines, N.S.: Five B.O.H. steel furnaces, 3 with a capacity of 54 tons each, and 2 of 45 tons each per heat.

Opsal Steel Co., Ltd., Vancouver, B.C.: One 2 ton electric steel furnace.

Steel Company of Canada, Ltd., Hamilton, Ont.: Eleven B.O.H. steel furnaces, 4 of 75 tons each, 5 of 50 tons each, and 2 with a capacity per heat of 25 tons.

Swedish Crucible Steel Company of Canada, Ltd., Windsor, Ont.: One side blown Bessemer with a capacity of 2 tons, three crucible steel furnaces of 18 pots per furnace and the same number of pots may be used at a heat.

The following firms were also engaged in producing steel in 1921:—Canadian Brakeshoe Co., Sherbrooke, P.Q.; Canadian Electric Steel Co., Montreal, P.Q.; Joliette Castings & Forgings, Ltd., Joliette, P.Q.; National Farming Machinery, Ltd., Montmagny, P.Q.; Vancouver Engineering Works, Ltd., Vancouver, B.C.

Mines Departments of Provincial Governments.—In addition to the Mines Department of the Dominion Government, from whose reports the foregoing tables and information have been compiled, there are Departments of Mines of the Provincial Governments of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia, as well as the Mines Branch of the Department of Public Works of the Provincial Government of Alberta.

Nova Scotia.—In Nova Scotia, the principal mining product is coal. According to the annual report of the Department of Public Works and Mines for the year ended Sept. 30, 1921, the quantity of coal raised in that year was 5,373,230 long tons, as compared with 5,687,970 in 1920 (decrease 314,740), 5,004,757 in 1919, 5,265,404 tons in 1918, 5,803,661 tons in 1917, and 6,496,472 tons in 1916. While the total number of men employed at the collieries in 1921 was 12,276, an increase of 968 over the previous year, the lack of demand for coal caused loss of working time at the mines, the number of colliery days worked being only 3,021,120, as compared with 3,375,954 in 1920. The production of other minerals in 1921 was, in short tons, as follows, the corresponding figures of 1920 being given within parentheses: pig iron 158,611 (280,586); steel ingots, 203,662 (361,742); limestone, 78,932 (249,993); coke, 233,799 (382,608); gypsum, 185,934 (174,520); building stone, 4,507 (8,040). The number of bricks made was 11,993,790, as compared with 18,350,354 in 1920, and the production of drain-pipe and tile was 826,254 feet, as against 1,164,270 feet in 1920. The production of gold was 379 oz., as compared with 744 oz. in 1920.

New Brunswick.—The annual report for the year ended October 31, 1921, of the Minister of Lands and Mines, shows that the quantity of coal shipped in the year 1920-21 was 140,142 long tons, as compared with 135,297 long tons in 1919-20. The output of gypsum from the Hillsboro quarries was about 45,000 tons. Crude oil to the amount of 229,434 gallons was produced by the New Brunswick Gas and Oilfields, Ltd., during the year, an increase of 54,607 gallons over the previous year.

Quebec.—The annual report on mining operations in the province of Quebec shows that the value of the mineral production of the province for the calendar year 1921 amounted to $15,522,988, as compared with $28,392,939 for 1920, the latter being the highest figure on record; the 1921 figures show a decline of no less than 45 p.c., due to the great depression and the low prices which prevailed. Of the total, the products of the mines proper amounted in 1921 to $5,634,177, of which $5,549,282 was of non-metallic minerals, as compared with $15,771,852 in 1920; the product of metallic minerals was $84,895, as compared with $483,888; building materials were valued at $9,888,811, as compared with $12,054,857. The values of the principal products in 1921, with the comparative values for 1920 given in parentheses, were as follows: asbestos, $5,199,789 ($14,749,048); cement, $5,410,276 ($6,545,053); brick, $1,198,471 ($1,956,473); limestone, $1,523,027 ($1,584,316); lime $624,574 ($682,477); granite, $369,122 ($494,372); marble, $167,664 ($228,353); building sand, $263,813 ($206,433). Table **99** shows the annual value of the mineral production of Quebec for the years 1900 to 1921.

Ontario.—Preliminary figures compiled by the Ontario Bureau of Mines show that the total value of the mineral production of Ontario in the calendar year 1921 was $48,128,387, as compared with $73,076,747 in 1920, $58,883,916 in 1919, $80,308,972 in 1918, $72,093,832 in 1917, $65,303,822 in 1916 and $54,245,679 in 1915. The value for 1920 was among the highest on record and the falling off in 1921 is attributed to the depression. Of the total value in 1921, $27,574,202 represents the value of the metallic and $20,554,185 the value of the non-metallic production. Gold shows a production of 709,509 oz., of the value of $14,624,085, as compared with 565,283 oz., valued at $11,686,043, in 1920. The total shipments of silver amounted to 8,412,059 fine oz., of the value of $5,497,160, as

compared with 11,065,415 oz. in 1920, of the value of $10,873,496, showing a considerable decline in value per oz. Table **100** shows the total production and value of silver at the Cobalt and Gowganda camp each year from 1904 to 1921. The total for the 18 years is 322,858,563 oz., of the value of $198,099,336. The value of the output of non-metallic products for 1921 was 17 p.c. less than in 1920. This decrease in the value of non-metallic minerals was largely due to the decreased production of brick and building stone, while the large decline in the value of metals produced is explained by the decline of the value of nickel production from $5,003,631 in 1920 to $2,010,750 in 1921, and of silver from $10,873,496 to $5,497,160.

Alberta.—The Mines Branch of the Department of Public Works states that the total production of coal in Alberta during the calendar year 1921 was 5,937,195 short tons, as compared with 6,908,923 tons in 1920, a decrease of 971,728 tons. Of natural gas the production in the province was, according to the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, 5,079,044 thousand cubic feet as compared with 5,633,442 thousand cubic feet in 1920.

British Columbia.—According to the Annual Report for 1921 of the Provincial Mineralogist, the total value of the mineral production of British Columbia from 1852 to 1921 was $734,259,619, distributed among the different mineral products as follows: Placer gold, $76,177,403; lode gold, $105,557,977; silver, $55,259,485; lead, $48,330,575; copper, $166,393,488; zinc, $21,848,531; coal and coke, $225,409,505; building stone, bricks, etc., $34,072,016; miscellaneous minerals, etc., $1,210,639. Table **101** shows the value of the total mineral production of the province from 1852 to 1921, inclusive. The value of the total mineral production for the calendar year 1921 was $28,066,641, a decrease from that of the previous year of $7,476,443, or 21 p.c. The principal mineral products of British Columbia are gold, silver, lead, copper, zinc and coal. Table **102** shows the quantity and value of the mineral production of British Columbia for the three calendar years 1919-1921. The decrease in 1921 was in the main due to a decline both in the quantity and value of silver, copper and zinc production.

World's Production of Gold and Silver.—Table **103**, taken from the Annual Report for 1921 of the Director of the United States Mint, gives by countries the quantity and value of the world's production of gold and silver for 1919 and 1920. For 1920 the total production of gold amounted to 16,203,123 fine oz., of the value of $334,808,866, as compared with 17,629,937 fine oz., valued at $365,789,684 in 1919, and 18,416,386 fine oz., valued at $380,700,489 in 1918, the decline being due to the increasing cost of operating gold mines during these years, while the value of gold per ounce remained the same. By countries, the Union of South Africa (Transvaal, Cape Colony and Natal) led in 1920 with a production of 8,158,455 ounces, or slightly more than half the total. The United States came second, with a production of 2,476,166 oz., the Commonwealth of Australia third with 943,768 oz., Canada fourth with 765,007 oz., Mexico fifth with 738,472 oz., and Southern Rhodesia sixth with 552,498 oz. The world's total production of silver in 1920 was 174,749,702 fine oz., valued at $178,001,005, as compared with 176,459,648 oz., valued at $197,633,675 in 1919, being a slight decline in quantity and a substantial decline in value, the average price of silver in New York being $1·0194 per oz., in 1920, as compared with

$1.12086 in 1919. By countries, the lead in silver production in 1920 was taken by Mexico with 66,662,253 oz., followed by the United States with 55,361,573 oz., Canada coming third with 13,330,557 oz.

[1]These figures are the sum of those given under the two previous headings.

MANUFACTURES.

Manufacture is defined as the operation of making wares from raw materials, by the hands, by art or by machinery, thus adding, in the phraseology of the economist, new utilities and therefore additional value, to the already existing utilities and values of the raw material. Manufacture, in primitive societies and in the pioneer stages of new communities, is normally carried on within the household for the needs of the household, as was the case among the early settlers of Canada in the seventeenth and eighteenth centuries. At a later period in the evolution of society, manufactures are carried on in specialized workshops for the needs of the immediate locality or neighbourhood, as was generally the case in Eastern Canada in the first half of the nineteenth century. Later still, as a consequence of the introduction of machinery operated by steam or electric power—the so-called "Industrial Revolution"—and of the cheapening of transportation, manufacture has to an increasing extent been concentrated in factories, often employing hundreds and even thousands of persons and producing for a national or even for an international market. So far as Canada is concerned, this "industrial revolution" may be said to have commenced shortly before Confederation and to be still in progress. The growth of manufacturing production since 1870 is outlined in this article and the accompanying Table **109**, while the increasing importance of manufacturing for the international market may be illustrated by reference to the statistics of Table 7 of the Trade and Commerce section of the 1920 Year Book, which shows that Canadian exports of manufactured produce increased from less than $3,000,000 per annum on the average of 1871-1875 to $435,000,000 in the post-war fiscal year ended March 31, 1920.

The kind of manufactures to be established in a community will in the beginning be largely determined, more especially where transportation charges are high, by the type of raw materials available in that community. For example, probably the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada, was the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first manufacturing processes were the construction of a mill equipped with a water wheel and the grinding of the grain into flour in the autumn of the same year. Other earlier manufactures were also necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need for protection. At a census of occupations taken in 1681, we find a comparatively large number of tailors and shoemakers, masons and carpenters, gunsmiths and edge-tool makers, enumerated.

The earlier manufactures were necessarily of a rather crude and primitive type, concerned with the preparation of commodities which were too bulky to bear the heavy transportation charges of those days, when only one round trip per annum could be made between France and Quebec, and vessels were constantly subject to the storms of the North Atlantic and very frequently to the attacks

of the English. Indeed, although the colonial policy of France under the old *régime* aimed at preventing the manufacture in Canada of any article which could be imported from the mother country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 years out of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. On the occasion of the English capture of a convoy in 1705, the colonists were driven to manufacture rough cloth out of whatever fibres they could obtain, such as the Canadian nettle and the inner bark of the basswood. Such events led to the introduction of sheep-raising and the growth of the domestic manufacture of homespun woollens. The number of sheep in the colony increased from 1,820 in 1706 to 12,175 in 1720, 28,022 in 1765, 84,696 in 1784 and 829,122 in Lower Canada alone in 1827. This increase in sheep approximately measures the growth of the manufacture of homespun woollens.

In the days when ships were built of wood, a country where wood was so plentiful as in Canada possessed the raw materials for production. Pont-Gravé built two small vessels at Port Royal in 1606 and one at Tadoussac in 1608. Talon in 1666 built on his private account a ship of 120 tons, and in 1672 a vessel of 400 to 500 tons was on the stocks at Quebec. Ships were built for the French navy and for the West India trade. Under the British *régime* shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865, when 105 Quebec-built ships with a tonnage of 59,333 tons were placed on the register. Thereafter iron and steel ships gradually supplanted the wooden vessels. The forests of Canada have since provided the raw material for the great pulp and paper industry.

The development of mines has been of comparatively recent date. Iron deposits in the St. Maurice regions were worked as early as 1733 and furnaces set up there for smelting in 1737 were in fairly constant operation until 1883. The iron and steel used in manufacturing in Canada, as well as the coal which has supplied the manufacturing industries with power, have in the main been imported from the United States, chiefly because the principal manufacturing centres of the country in the St. Lawrence and Great Lakes region were fairly conveniently situated with regard to the coal and iron supplies of the United States, and far away from the coal and iron supplies of the Maritime Provinces. In recent years the shortage of coal is made up for by the increasing use of electric power, but the great bulk of the pig-iron used in Canadian manufactures is still imported.

During the first half of the nineteenth century, the manufactures carried on in Canada were mainly domestic—carried on in the household or in small adjoining buildings. In 1827, according to census records, there were in Lower Canada 13,243 spinning-wheels, and 1,153,673 French ells of home-made cloth, 808,240 French ells of home-made flannel, and 1,058,696 French ells of home-made linen were produced. In 1842 Upper Canada produced 433,527 yards of

home-made cloth, 166,881 yards of home-made linen and 727,286 yards of home-made flannel, and in 1848, 624,971 yards of fulled cloth, 71,715 yards linen and 1,298,172 yards flannel. Nova Scotia in 1851 produced 119,698 yards fulled cloth, 790,104 yards non-fulled cloth, and 219,352 yards flannel. Such production of homespun goods did not materially interfere with the market for the more elaborate factory-made goods imported from the United Kingdom, but supplied the numerous daughters in the large families of the pioneers with useful work in their own homes.

The factory system of production, because of the great economies in production made possible by the division of labour and the use of mechanical power, was to come into vogue in Canada as well as in the mother country and the United States. In 1858 and 1859, the Government of the then province of Canada adopted the policy of granting "incidental protection" to the growing industries of the province, and denied the right of the colonial secretary to disallow the tariff legislation of these years in deference to the protests of British manufacturers. From that time to the present there has been an element of protection in the Canadian tariff, though at Confederation the tariff was lowered to meet the wishes of the Maritime Provinces, which were commercial rather than manufacturing communities.

The first post-Confederation census of Canadian manufacturing production was taken in 1871, as for the previous year, and the summary statistics of this and subsequent censuses are given in Table **109,** which shows a striking increase in manufactures during the period of nearly half a century which the statistics cover. Owing to the increase in prices and the emergency production of munitions this growth has been particularly great in recent years, while the increased use of hydro-electric power in the coal-less industrialized districts of Ontario and Quebec has been another great factor in recent industrial development.

In the present as in the past, Canadian manufacturing producton has been chiefly dependent upon the use of Canadian raw material, though this has recently been less true than formerly. Raw cotton, for example, is imported from the Southern States, hides from the Argentine, rubber from the Straits Settlements and Malay Peninsula, sugar from Cuba and the British West Indies, and wool from Australia and New Zealand, to supply the raw material for Canadian manufacturing industries. Nevertheless, as stated by Prof. Mavor of Toronto in the Oxford Survey of the British Empire, the most important industrial activities in the Eastern industrial region, are as of old necessarily devoted to the exploitation of the raw materials with which the region abounds and to the manufacture of these. The forest industries take a prominent place, including the preparation of timber for construction purposes; the manufacture of doors and windows; of matches, of wood pulp and paper. Naturally also, the manufacture of food products is an industry of the greatest importance in a food-producing country, and the manufacture of agricultural machinery is also an important branch of

industry. During the period of development since the commencement of the present century, the manufacture of such materials of construction as iron, steel and cement has come to be of the greatest importance.

Growth of Large-Scale Production.—The growth of large-scale production in manufactures during the past fifty years is evident from the statistics of Table **109**, though this tendency has been less marked in Canada than in more highly developed industrial communities, with larger populations able to absorb a larger amount of standardized commodities. Even so, in the electoral district of South Toronto, the most important manufacturing centre of Ontario, the census of 1911 showed that one-half of the industrial establishments employed 90 p.c. of the workers. In the period immediately preceding the Great War many consolidations of previously independent manufacturing plants were effected, involving large economies in the purchase of materials and in selling expenses.

The historical Table **109** shows fairly well the advance of the Industrial Revolution (which might better be called Evolution) in Canada. The average capital per manufacturing establishment, the average number of employees per establishments, the average value of products per establishment, have been fairly continuously on the increase. If the consolidation of industry lessens the chances of an employee becoming a master, it must also be remembered that the amounts paid to employees in salaries and wages have also increased, so that the position of the average employee has been greatly ameliorated, though the lack of statistics on Canadian prices before 1890 prevents us from accurately comparing the purchasing power of the average wages of the worker in 1870 and of the employee of 1919.

The comparability of the statistics of the various censuses is seriously affected by the different methods employed in taking the census. In the censuses of 1870, 1880 and 1890, all manufacturing establishments were included, the instructions to enumerators running as follows:—"An industrial establishment is a place where one or several persons are employed in manufacturing, altering, making up or changing from one shape into another, materials for sale, use or consumption, quite irrespectively of the amount of capital employed or of the products turned out. All repairs, mending or custom work are understood to be industrial products and are to be entered accordingly, by value, in the returns of industrial establishments".

In the statistics for 1900, 1905, and 1910, however, only establishments employing five hands and upwards were included. The 1901 instructions are that no manufacturing establishment or factory will be so recognized for census purposes which does not employ at least five persons, either in the establishment itself or as pieceworkers employed out of it. This, however, did not apply to cheese and butter factories nor to certain mineral products. The 1911 instructions stated that every factory in operation during the whole or part of

1910, and employing five or more persons, was to make a full report. All flour mills, saw and shingle mills, lime kilns, brick and tile works, butter and cheese factories, fish curing plants, electric light and power plants whatsoever were nevertheless to be included. The statistics for 1915 included only establishments having an output of $2,500 or over, irrespective of the number of persons employed, except in the case of flour and grist mills, butter and cheese factories, fish preserving factories, saw-mills, brick and tile yards, lime kilns and electric light plants, where all plants were included.

In the census of industry of 1917, the limit of output was withdrawn and all establishments reporting to the Bureau were included, the effect being an increase in the number of establishments included from 21,306 in 1915 to 34,392 in 1917—an increase due mainly to change of method, rather than to a change in the actual number of industrial establishments existing in the Dominion. Similar methods have been pursued in the censuses of 1918 and 1919, so that the results for the three years are strictly comparable, a fact which has been the guiding principle in framing the tables included in this part of the Year Book. As the establishments included for the first time in the 1917 census were those which carried on business only on a small scale, their inclusion affected only to a minor extent the statistics of those engaged in production and of the value of products.

Recent Censuses of Manufactures.—The census of manufactures has since 1917 been taken by the Dominion Bureau of Statistics annually instead of quinquennially. The last of the quinquennial censuses was taken in 1916 for the calendar year 1915, and the first annual censuses were taken in 1918, 1919 and 1920 for the calendar years 1917, 1918 and 1919.

In any comparison between the results of the 1915 quinquennial census and the subsequent annual censuses the rapid rise in prices must be borne in mind, and in comparisons between these annual censuses themselves the same factor must be taken into account. The Canadian index number of wholesale prices was 293.2 for 1919 as compared with 278.3 for 1918, 237.0 for 1917 and 148.0 in 1915. Under such circumstances it was inevitable that considerable increases in the money value of products should have been recorded, and that wages and salaries paid should also have greatly advanced since 1915.

Summary statistics of manufactures for 1917, 1918 and 1919, are contained in Table **111**, significant features of which are the increase in capital, salaries, wages, and value of products during the period. More detailed statistics by groups of industries are given in Table **112**, which shows among other things, an extraordinary decline in the value of iron and steel products and of chemical products in 1919 as compared with 1918, accounted for by the transition from war to peace. This decline was observable both in the cost of raw materials and in the value of finished products, while the comparative stagnation in these industries was also reflected in a decline in the number of wage-earners, the number in the iron and steel industry, for example,

falling from 69,466 in 1918 to 56,442 in 1919, and in the chemical industry from 16,541 to 12,216. The miscellaneous industries group also declined greatly in value of products and in number of employees owing to the cessation of the manufacture of ammunition, which fell in gross value of product from $186,034,920 in 1918 to $3,709,428, and in number of wage-earners from 35,046 to 1,321.

On the whole, it may be stated that 1919, partly owing to the higher prices, was a very prosperous year for Canadian manufactures outside of the munitions and war supplies industries.

Statistics of number of establishments, capital, cost of materials, and value of products, are given for some 300 different industries for the years 1917, 1918, 1919, in Table **112**, and statistics of the number of salary-earning and wage-earning employees and of salaries and wages paid in these same industries are given in Table **113**. Among the chief of these individual industries are the butter and cheese industry, the flour and grist mill industry, the slaughtering and meat packing industry, the refined sugar industry and the log products industry, each of which turned out in 1919 gross products exceeding $100,000,000 in value. Industries having a gross product of between $50,000,000 and $100,000,000 in 1919 were biscuit and confectionery, bread and other bakery products, cottons, foundry and machine shop products, rolling mills and steel furnaces, boots and shoes, smelting, wood pulp and paper. For details regarding capitalization, products, number of employees and wages paid in these and other industries, the reader is referred to the tables.

The growth and prosperity of most of the cities and large towns of Canada is intimately connected with the condition of their manufacturing industries. Statistics of the manufacturing industries in all cities and towns of over 5,000 population throughout the country, as ascertained at the censuses of 1917 ,1918 and 1919, are given in Table **114**. As a consequence of the return to peace time conditions, the figures for 1919 are in many cases strikingly reduced from those of 1918, as in the cases of Sydney and Sault Ste. Marie. Cities having a gross manufacturing production of over $100,000,000 each in 1919, in the order of the value of their products, were Montreal, Toronto, Hamilton, Winnipeg. Vancouver, the only city in the $50,000,000 to $100,000,000 class in 1919, produced manufactures to the gross value of $88,104,138. Other important manufacturing cities producing in 1919 goods to a gross value of between $30,000,000 and $50,000,000 were, in the order of value produced, London, St. John, N.B., Ottawa, Kitchener, Sydney, Brantford, Oshawa, Calgary, Quebec, Edmonton and Peterborough. For details the reader is referred to Table **114**.

Summary statistics of the number of salaried and wage-earning employees of manufacturing industries, with the amount of salaries and wages paid in 1919, are given in Table **115**. Information collected at this census regarding weekly wages of employees in manufacturing industries, is tabulated by groups of industries and by wage groups in the Wages subsection of the Labour, Wages and Prices section of the Year Book, and to this the student of industrial wages is referred.

110.—Summary Statistics of Manufactures of Canada, 1917, 1918 and 1919.

(All establishments irrespective of the number of employees.)

Items.		1917	1918.	1919.	Increase p. c. 1918–19.
Establishments	No.	34,392	35,797	38,344	7.12
Capital	$	2,786,649,727	3,034,301,915	3,230,686,368	6.47
Average capital per establishment	$	81,026	84,764	84,229	—0.63
Employees on salaries	No.	73,605	75,221	88,316	17.41
Salaries	$	94,992,246	107,503.074	130,855,002	21.72
Average salary	$	1,291	1,429	1.482	3.71
Employees on wages	No.	601,305	603,116	594,118	—1.49
Wages	$	455,199,823	522,287,570	558,580,707	6.95
Average wage	$	757	866	940	8.54
Cost of materials	$	1,605,730,640	1,900,252,314	1,875,615,877	—1.30
Value added in manufacture	$	1,409,847,300	1,557,784,661	1,645,115,712	5.61
Value of products	$	3,015,577,940	3,458,036,975	3,520,731,589	1.81
Average value products per establishment	$	87,682	96,601	91.820	—4.95
Piece Workers[1]	No.	17,157	14,197	15,374	8.29
Earnings of piece workers	$	3,109,606	3,520,544	3,401,663	—3.38

NOTE—Minus (—) denotes decrease. [1]Not included in general statistics of number of employees or earnings.

NOTE.—These statistics and those of the two following Tables may be compared with the corresponding statistics for 1915, given on pages 285-293 of the 1916-17 edition of the Year Book, under the reservation that in 1915 statistics were secured only from establishments having an output of $2,500 or over, except in the case of flour and grist mills, butter and cheese factories, fish preserving factories, saw-mills, brick and tile yards, lime kilns and electric light plants, in which cases all establishments were included. In the above Table, and in those that follow, all establishments in all industries are included.

112.—Statistics of Number of Manufacturing Establishments, Capital, Cost of

No.	Groups and Kinds of Industries.	Establishments.			Capital.

(9) Included in clay products in 1918 and 1919.
(10) Included in brick and tile in 1917.
(11) Included in dyeing, cleaning and laundry work in 1919.
(12) Included in cement products in 1919.
(13) Included in pig iron in 1919.
(14) Included in smelting in 1919.
(15) Included in plumbing and tinsmithing in 1917 and 1919.
(16) Included in 1919 with railway capital shown on page 533.
(17) Included in 1919 with primary production of minerals.

WATER POWERS OF CANADA.

By J. B. Challies, C. E., M.E.I.C., Director, Dominion Water Power Branch, Department of the Interior, Ottawa.

Prior to the world war the price of fuels was such that ample motive power could be secured through their agency at such reasonable cost that the development of water power only took place where the natural facilities greatly favoured it or where coal costs were relatively high. With the advent of war coal costs soared and supplies became uncertain, whilst power requirements became vastly greater and in consequence greatly stimulated the development of water power. The return of peace has not yet produced any marked amelioration in the coal situation, although the reduction of industrial activity has considerably reduced the power demands.

At the present time any great activity in water power development awaits improvement in financial and industrial conditions, but the general stock-taking throughout the world in regard to water power resources continues and there can be no reasonable doubt that as conditions improve the development of water power will attain even greater proportions.

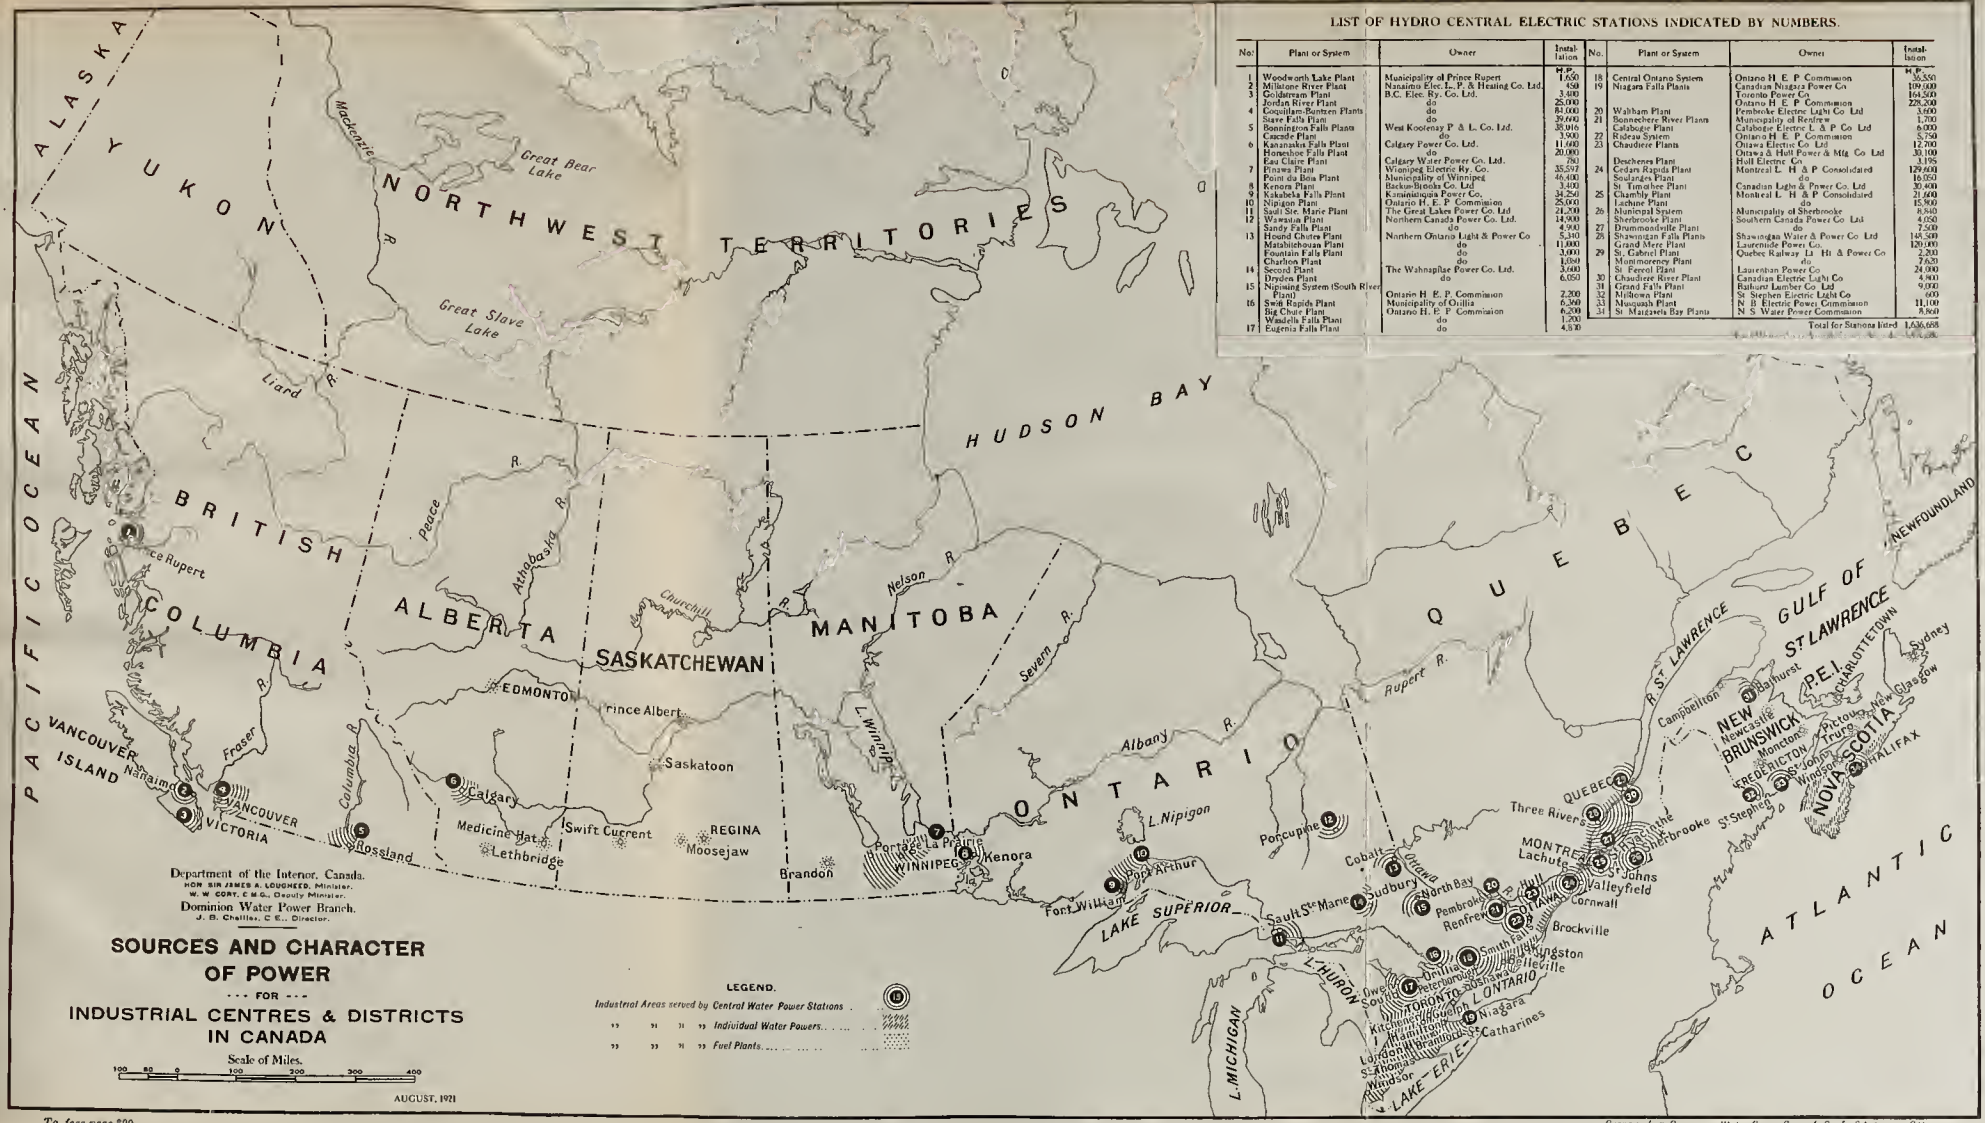
The United States Geological Survey in 1921 issued an Atlas illustrating the water power resources of the world, which it places at 439,000,000 horse power, 43.3 per cent of which are in Africa and 14.1 per cent in North America. The developed water power is estimated at 22,829,000 horse power, more than half of which is on this continent and over 12 per cent in Canada.

In Table **116** are listed the more important water power countries, together with their population and water powers. It is interesting to note that, with the exception of Norway, Canada has the greatest per capita development, and next to the United States, the greatest actual development, whilst its undeveloped resources are proportionately the greatest.

116.—Developed and Available Water Power of leading Countries.

Countries.	Water Power.			
	Population.	Developed.		Available.
		H.P.	Per 1000 population.	H.P. (Minimum).
Sweden	5,814,000	1,460,000	251	4,500,000
Norway	2,700,000	1,350,000	500	5,500 000
Italy	40,000,000	1,150,000	287	3,800,000
Switzerland	4,000,000	1,070,000	267	1,400,000
France	41,500,000	1,400,000	34	4,700,000
United States	105,683,108	9,823,540	93	28,000,000
Canada	8,788,483	2,762,880	314	18,255,316

With this brief reference to the water powers of the world we may proceed to a more particular consideration and analysis of those of the Dominion. It has already been shown that Canada is richly endowed with water power resources and is in the forefront as



LIST OF HYDRO CENTRAL ELECTRIC STATIONS INDICATED BY NUMBERS.
No. | Plant or System | Owner | Installation H.P.
1 | Woodworth Lake Plant | Municipality of Prince Rupert | 1,650
2 | Millsite or River Plant | Nanaimo Elec. L. P. & Heating Co. Ltd. | 450
3 | Goldstream Plant | B.C. Elec. Ry. Co. Ltd. | 3,400
Jordan River Plant | do | 25,000
4 | Coquitlam-Buntzen Plants | do | 81,000
Stave Falls Plant | do | 39,600
5 | Bonnington Falls Plants | West Kootenay P. & L. Co. Ltd. | 38,916
Cascade Plant | do | 3,900

regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within easy transmission distance ample reserves for the future. Over 90% of the prime motive power of the central electric stations of Canada is hydro power. The main-spring of industrial progress in the central provinces, which have no indigenous coal supplies, is water power.

Table **117** shows the distribution of available and developed power in Canada.

117.—Available and Developed Water Power in Canada, March 1, 1922.

Provinces.	Available 24-hr. power at 80% efficiency.		Turbine Installation h.p.
	At ordinary min. flow h.p.	At est. flow for max. dev. (Dependable for 6 months) h.p.	
British Columbia	1,931,142	5,103,460	305,315
Alberta	475,281	1,137,505	33,187
Saskatchewan	513,481	1,087,756	—
Manitoba	3,270,491	5,769,444	104,147
Ontario	4,950,300	6,808,190	1,212,650
Quebec	6,915,244	11,640,052	1,015,385
New Brunswick	50,406	120,807	30,180
Nova Scotia	20,751	128,264	46,948
Prince Edward Island	3,000	5,270	1,869
Yukon and Northwest Territories	125,220	275,250	13,199
Total	**18,255,316**	**32,075,998**	**2,762,880**

The figures listed in columns 2 and 3 in the above table represent 24-hr. power and are based upon rapids, falls and power sites of which the actual existent drop or the head possible of concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or lesser power capacity which are not as yet recorded, are scattered on rivers and streams from coast to coast, and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the more unexplored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at such points as definite studies have been carried out and the results made matters of record.

The figures in column 4 represent the actual water wheels installed throughout the Dominion. These figures should not be placed in direct comparison with the available power figures in Columns 2 and 3 for the purpose of deducing therefrom the percentage of the available water power resources developed to date. The actual water wheel installation throughout the Dominion averages 30% greater than corresponding maximum available power figures calculated as in column 3. The figures quoted above therefore indicate that the *at present recorded water power resources* of the Dominion will permit of a turbine installation of *41,700,000 horse power*. In

other words, the present turbine installation represents only *6.6 per cent* of the present recorded water power resources.

The above figures may be said to represent the *minimum water power possibilities* of the Dominion.

As illustrative of this, the detailed analyses which have been made of the water power resources of the provinces of New Brunswick and Nova Scotia have disclosed most advantageous reservoir facilities for regulating stream flow. It is estimated that the two provinces possess within their respective borders 200,000 and 300,000 commercial horse power. These figures provide for a diversity factor between installed power and consumers' demands.

Table **118** analyses the developed water power and is interesting in that it shows the extent to which the great pulp and paper industry of the Dominion owes its development to water power.

The statistics concerning the central station industry are further analysed in Table **119**. The territory served by and the primary power installed in central stations are graphically indicated on the map facing page 390 and the diagram facing page 392. The statistics concerning the pulp and paper Industry are analysed in Table **120**.

While it was noted at the beginning of this brief summary that water power activity in general awaits improvement in financial and industrial conditions, it should be further noted that in Canada such activity has been very considerable in spite of adverse conditions. During 1921 installations have been made which amount to practically 300,000 horse power, this figure including both new construction and the erection of new turbines and generators in existing water power stations. At the present time there are several new developments in course of construction and there is every indication that for a long time to come the development of water power in Canada will make great and continued progress.

118.—Developed Water Power in Canada, March 1, 1922.

Provinces.	Turbine Installation in H.P.				
	In Central Stations.[1]	In Pulp and Paper Mills[2]	In Other Industries.[3]	Total[4].	Per 1000 Population.[5]

[6]Total of the water power used in the industry.

IX.—TRADE AND COMMERCE.

Historical.—In the early history of the American continent each of the different European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them, and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. Under these circumstances the colonial wars in America were carried on, by governments permeated by the mercantile spirit, for "ships, colonies and commerce." Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously

controlled the trade between the colonial power and its colony found their occupations gone, while new traders from the conquering state arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the foreign trade of Canada still remained a preserve of the merchants of Old France. Upon the conquest of the country by the British, the French merchants who had their offices in Quebec and Montreal for the most part returned to France, and the trade of the colony fell into the hands of the traders from England, Scotland and New England who had swarmed into the country at the heels of the invading armies. Some of their descendants are still among the leaders of Canadian import and export trade.

For the first half century of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was however, a factor which could not permanently be ignored. Smuggling became more and more prevalent as the process of settlement extended westward along the international boundary. In 1822 Great Britain made considerable trading concessions to United States traders. In 1846 she abolished the preferential treatment which she had given to Canadian wheat and by 1860 all vestige of preference to colonial products had disappeared from the British tariff. As a consequence the colonies, which, like Canada, were by this time enjoying responsible government, could not any longer be refused the right to control their own commerical policy—a fact which was emphasized in an important report prepared in 1859 by the Minister of Finance, Sir A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation, (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government, and coming at a time when all important parties in Great Britain had accepted free trade as a *fait accompli*, it facilitated the setting up of a protective tariff in Canada, designed to secure the establishment in Canada of manufacturing industries at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials, importing from Great Britain the manufactured commodities which they required.

The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became conterminous with British North America, the area of internal free trade was thereby extended, while protection against outside competition was maintained. The tariff was the same against all countries, British or non-British, until 1897, when the British preferential tariff was established in the shape of a remission of a percentage of the duty generally imposed, a method of preference abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities. In 1907 an intermediate tariff was established for use as a basis of negotiation with foreign countries in the interests of Canadian trade, the list of countries whose goods are entitled to special treatment being in 1922 as follows: France, her colonies and protectorates, Belgium, Italy and the Netherlands (all these under special Treaties); Argentine Republic, Colombia, Denmark, Japan, Norway, Russia, Spain, Sweden, Switzerland and Venezuela (under reciprocal most favoured nation clause treatment). The general tariff is in force with respect to the products of all other foreign countries. There is also in the Canadian customs tariff an anti-dumping clause, providing that in the case of imported articles of a kind made or produced in Canada, if the export or selling price to the Canadian importer is less than the fair market value in the country whence imported, there shall be levied, in addition to the duties otherwise payable, a special duty according to the difference between the selling price for export and the fair market value for home consumption, but such special duty shall not exceed 15 p.c. *ad valorem*, nor be levied on goods when the normal duties are 50 p.c. *ad valorem*, nor on goods subject to excise duty.

Drawbacks of 99 p.c. of duties paid on imported materials are allowed by the customs laws and regulations in cases where articles manufactured from such materials are afterwards exported.

Trade Statistics.—In the consideration of the foreign trade statistics of Canada, the following facts should be borne in mind: First, statistics are given since 1907 for the fiscal years ended March 31. Secondly, imports means always "imports for consumption" and this term does not necessarily imply that the goods have been actually consumed in Canada, but only that they have passed into the possession of the importer; the value given for goods imported is the fair market value thereof when sold for home consumption on the principal markets of the country whence and at the time when the goods were exported to Canada. Thirdly, the term "Canadian produce" includes all imported articles which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, flour ground from imported wheat, and articles constructed or manufactured from imported materials; the value of "Canadian produce" is its value at the time of exportation at the Canadian ports from which it is shipped. Fourthly, the term "foreign produce"

applies to the exports of foreign goods which had previously been imported (re-exports); the value of "foreign produce" is the actual cost of the goods.

A general view of the aggregate trade of Canada for the years from 1868 to 1922 is furnished in Table **1**, giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, difficulties have been met with in maintaining comparable statistics through such a length of time, one of the most serious of these arising through different methods adopted in dealing with exports of foreign produce. The shrinkage in the exports of foreign produce between 1919 and 1922 for example has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past two years re-exports of foreign products from bonded warehouses have no longer been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce have during this period been composed of goods which had previously been entered as imports for home consumption. Such goods, therefore, are shown as debited to Canada when entering this country and should, therefore, be credited to Canada when re-exported. Consequently, in determining our visible balance of trade in Table **2**, it has been necessary to set off the total exports of the past two years against the imports for home consumption. The same table gives the per capita imports for home consumption and exports of Canadian produce since Confederation.

From Table **2** it will be observed that the so-called "balance of trade" has been against Canada (i.e., the imports for home consumption have exceeded the exports of Canadian produce) in forty-four years out of the fifty-five years since Confederation, and that this adverse balance reached its highest point in 1913, just before the war. After 1913 the unfavourable trade balance diminished, and in 1916, for the first time since 1898, it gave place to a favourable balance of trade, which continued down to 1920, but was replaced by a comparatively small adverse balance of trade in 1921 and a small favourable balance in 1922. For 1916 the exports of Canadian produce were 146·03 p.c., for 1917, 136·20 p.c., for 1918, 159·99 p.c., for 1919, 132·73 p.c., for 1920, 116·43 p.c., for 1921, 97·60 p.c. and for 1922, 100·82 p.c. of the imports for home consumption, exports of foreign produce having been included with domestic exports for the last two years, for reasons stated above.

The values of coin and bullion imported and exported, these movements from 1914 on representing fiduciary transactions rather than trading exchanges, are shown in Table **3.** Amounts collected in export duties from 1868 to 1892, and in import duties from 1868 to 1922 are stated by years in Table **4.** Tables **5** and **6** give the statistics of our exports of Canadian produce and our imports for home consumption respectively, figures being furnished of our trade with the United Kingdom, United States and other countries since 1868. These figures show the overwhelming predominance of the two great

English-speaking countries in our foreign trade; in the fiscal year ended March 31, 1922, for example, 80·1 p.c. of our exports of domestic produce was shipped to these two countries, which in the same year together provided 84·7 p.c. of our imports for home consumption. Tables **7** and **8** show respectively by years the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1901, and the *ad valorem* rates of duty collected on imports from these countries from 1868. The exports of domestic produce to the United Kingdom, the United States and all countries are published, classified according to origin under the new classification of the Dominion Bureau of Statistics, for the four fiscal years 1919 to 1922, in Table **9,** while Table **10** is a similarly classified table of imports. Tables **11** and **12** are, as in former years, the great detailed tables of imports and exports, published for the four fiscal years 1919 to 1922. In Tables **13, 14** and **15,** the recent foreign trade of Canada is analyzed according to origin, degree of manufacture and purpose for which commodities are used. The course of our recent trade with the West Indies is shown in Tables **16** to **18.** Customs duty collected at ports of entry throughout Canada is given in Table **20,** imports under our different rates of tariff in Table **21,** while our trade is analyzed by countries in Tables **22** to **25.** Tables **26** and **27,** showing respectively British imports of food commodities and United States exports of such commodities, for the past five years, are added for the purpose of informing our traders concerning the imports of their great customer and the exports of their great competitor.

Aggregate External Trade.—The aggregate external trade of Canada for the fiscal year ended Mar. 31, 1922, was valued at $1,501,731,341, as compared with $2,450,587,001 for the preceding fiscal year, a falling off of nearly 40 p.c. This is, on paper, an unprecedented decline, and was doubtless partly a real decrease, due to the depression which prevailed during the latter year. However, the index number of wholesale prices issued by the Department of Labour, averaged for these two twelve-month periods, shows that in the later period the index number was 235·1 as compared with 315·1 in the earlier, a drop of 25·5 p.c. From this it may be inferred that the falling off of 40 p.c. in our trade was to the extent of approximately 25 p.c. due to falling prices and to the extent of approximately 15 p.c. due to declining quantities.

In regard to balance of trade, our exports to the United Kingdom were $299,361,675 of domestic, plus $1,001,518 of foreign produce, as compared with imports of $117,134,576, a favourable visible balance of trade of $183,228,617, as compared with $100,255,109 in the preceding year, a result partly attributable to the British coal strike of the summer of 1921. Our visible adverse balance of trade with the United States was in 1922 only $210,682,930 as compared with $295,475,684 in 1921, a reduction which is rather significant in view of high protective duties lately levied by the United States against commodities which are to a large extent produced in Canada.

[1]Nine months.

[2]Excess of imports for home consumption over total exports, or of total exports over imports for home consumption. These amounts represent the true balance of trade, since for the last two years goods shown as foreign exports have previously been entered as imported for home consumption.

[3]Percentage of total exports to imports for home consumption.

3.—Movement of Coin and Bullion, 1868-1918.

NOTE.—Information as to imports and exports of coin and bullion in the fiscal years 1919 to 1922 is not available for publication. Up to 1919 "Silver bullion in bars, blocks, ingots, drops, sheets and plates, unmanufactured," was included in "coin and bullion," but since that time it is regarded as "merchandise." The figures from 1899 of the above table have been revised in accordance with the new arrangement.

12.—Imports of Canada from the United Kingdom, the United States and All Countries in quantities and values by classes entered for consumption in the four fiscal years 1919-1922.—con.

No.	Principal articles by classes.		1919. United Kingdom.	1919. United States.	1919. All Countries.	United Kingdom.
	V. Iron and its products—con.					
	Other machinery—con.					
1	Paper and pulp machinery	$	616	761,577	762,193	280,604
2	Rolling-mill machinery	$	–	420,792	420,792	–
3	Saw-mill machines	$	–	118,066	119,056	–
4	Textile machinery of a class or kind not made in Canada and parts of	$	127,577	2,081,151	2,209,228	218,272
5	Other machinery composed wholly or in part of iron or steel and parts of	$	353,058	16,144,397	16,527,451	578,050
	Rolling mill products—					
6	Rolled iron or steel and cast steel in bars, bands, hoops, etc.	cwt.	39,517	1,365,437	1,409,072	56,485
		$	1,310,379	10,059,372	11,419,193	920,740
7	Rolled iron or steel hoop, scroll or strip, No. 14 gauge and thinner	cwt.	–	162,068	162,068	606
		$	–	780,096	780,096	3,241
8	Rolled iron or steel hoop, band, scroll or strip, 14 gauge and thinner, galvanized.	cwt.	–	141,112	141,112	2,161
		$	–	701,261	701,261	14,985
9	Steel, rolled, for saws and straw cutters, not tempered or ground	cwt.	156	21,315	21,291	1
		$	4,019	350,338	354,357	11
10	Bar iron or steel, rolled	cwt.	729	1,034,292	1,035,021	–
		$	2,76[illegible]	3,211,132	3,213,900	–
11	Forgings of iron or steel	lb.	56,80[illegible]	3,586,913	3,643,718	–
		$	4,703	379,076	383,779	–
12	Iron and steel railway bars or rails	ton	–	10,236	10,236	–
		$	–	546,830	546,830	–
13	Shafting, round, steel, in bars, etc	cwt.	–	47,817	47,817	–
		$	–	244,394	244,394	–
	Plates and sheets—					
14	Boiler plate of iron or steel	cwt.	1,301	267,708	269,009	473
		$	6,808	1,214,821	1,221,629	1,411
15	Canada plates, Russia iron, terne plate	cwt.	–	135,941	135,941	1,934
		$	–	745,016	745,016	15,485
16	Iron sheets and plates, tin	cwt.	895	1,448,880	1,449,775	9,476
		$	11,176	11,263,164	11,274,340	118,661
17	Rolled iron or steel plates not less than 30 inches in width	cwt.	–	487,549	487,549	–
		$	–	1,637,273	1,637,273	–
18	Rolled iron or steel plates or sheets, sheared or unsheared, etc	cwt.	–	153,357	153,357	–
		$	–	573,364	573,364	–
19	Rolled iron or steel sheets, polished or not	cwt.	260	785,371	785,631	15,120
		$	1,532	4,351,479	4,353,011	116,256
20	Sheets, flat, of galvanized iron or steel	cwt.	–	136,693	136,693	21,869
		$	–	809,100	809,100	163,883
21	Skelp iron or steel, sheared or rolled in grooves	cwt.	–	1,329,151	1,329,151	–
		$	–	4,439,785	4,439,785	–
22	Rolled round wire rods of iron or steel	cwt.	–	891,002	891,002	–
		$	–	2,484,028	2,484,028	–
23	Rolled iron or steel angles, tees, beams, etc	cwt.	460	610,645	611,105	271
		$	1,763	1,929,304	1,931,067	1,693
24	Rolled iron or steel angles, beams, channels and other rolled shapes, etc	cwt.	682	1,142,466	1,143,148	–
		$	2,297	3,577,039	3,579,336	–
25	Steel plate	cwt.	–	181,257	181,257	–
		$	–	594,355	594,355	–
26	Seamless steel or wrought-iron boiler tubes	$	16,388	2,176,229	2,192,617	67,653
	Total rolling mill products	$	**1,639,351**	**62,151,289**	**63,843,164**	**1,508,948**

12.—Imports of Canada from the United Kingdom, the United States and All Countries in quantities and values by classes entered for consumption in the four fiscal years 1919-1922.—concluded.

No.	Principal articles by classes.		1919. United Kingdom.	1919. United States.	1919. All Countries.	1922. United Kingdom.
	VIII. Chemicals and allied products—concluded.					
	Inorganic chemicals—concluded.					
1	Sal ammoniac	lb.	209,846	484,009	693,855	774,282
		$	23,853	67,382	91,235	85,199
2	Copper, sulphate of (blue vitriol)	lb.	–	2,526,418	2,526,718	518,616
		$	–	220,482	220,607	49,436
3	Chloride of lime, etc	lb.	–	11,958,547	11,958,547	194,450
		$	–	174,362	174,362	5,509
4	Cream of tartar in crystals or argols	lb.	43,040	322,896	473,703	182,503
		$	22,845	180,183	261,653	72,414
5	Borax in bulk	lb.	2,240	2,309,525	2,311,765	6,890
		$	292	180,800	181,092	589
6	Soda ash or barilla	lb.	14,861,757	71,398,304	86,260,061	1,030,102
		$	230,889	1,685,034	1,915,923	19,274
7	Soda, bicarbonate of	lb.	1,561,847	5,547,213	7,109,060	3,371,055
		$	27,746	123,026	150,772	67,542
8	Soda, caustic	lb.	224,428	11,155,053	11,379,483	–
		$	15,087	507,037	522,124	–
9	Soda, sal	lb.	27,139	10,644,763	10,671,902	–
		$	575	170,771	171,346	–
10	Soda, sulphate of, crude, known as salt cake	lb.	32,890,788	34,726,974	67,617,762	2,478,750
		$	216,068	410,378	626,446	40,609
11	Soda, silicate of, in crystals or solution	lb.	1,017,725	24,452,390	25,470,115	543,980
		$	21,857	265,504	287,361	14,763
12	Acid phosphate, not medicinal	lb.	–	3,102,469	3,102,469	24,239
		$	–	307,891	307,891	2,593
	Total inorganic chemicals	$	**738,720**	**5,776,498**	**6,582,532**	**574,649**
	Other chemicals, n.o.p.—					
13	Camphor	lb.	19,107	15,317	69,925	10,475
		$	27,441	19,068	91,646	25,384
14	Cyanide of potassium	lb.	1,197,468	393,969	1,591,437	634,082
		$	324,108	100,020	424,128	157,794
15	Ink, printing	$	13,658	143,631	157,571	15,734
16	Polish or composition, knife or other	$	37,034	236,329	273,381	97,633
	Total chemicals and allied products	$	**3,397,035**	**28,719,765**	**34,282,647**	**4,154,345**
	IX. All other commodities.					
	Amusement and sporting goods—					
17	Cinematograph or moving picture films, positives	$	22,143	924,511	947,033	55,441
18	Toys, all kinds	$	28,208	708,489	972,137	76,686
	Total amusement and sporting goods	$	**55,880**	**1,722,573**	**2,017,134**	**150,680**
19	Brushes	$	32,974	377,098	606,771	61,544
20	Packages	$	613,065	652,594	1,455,277	981,272
	Household and Personal equipment—					
21	Boot, shoe, shirt and stay laces	$	5,000	227,005	314,278	57,907
22	Boots, shoes, slippers, etc	$	50,681	215,428	300,364	71,470
23	Buttons, all kinds	$	20,167	807,927	1,037,025	22,501
24	Jewellery	$	13,198	724,833	750,771	50,030
25	Pencils, lead	$	6,570	477,316	497,927	13,832
26	Pocket books, portfolios, etc	$	8,936	440,105	465,474	46,026
27	Spectacle frames, eye-glass frames	$	74	161,197	161,275	15
28	Tobacco pipes, all kinds, etc	$	174,186	481,457	754,757	489,341
29	Braids, cords, fringes, tassels	$	23,889	319,695	358,736	53,102
	Total household and personal equipment	$	**783,842**	**4,983,627**	**6,692,672**	**991,181**

GRAIN STATISTICS.

Tables 28 to 32 give the principal statistics relating to the storage, inspection, grading and shipment of Canadian grain, the trade in which is regulated by the Dominion Government under The Canada Grain Act, 1912 (2 Geo. V, c. 27)[1]. Probably no country in the world possesses a system for the sale and shipment of its grain products so complete and elaborate as is that of Canada. In this system the grain elevator plays an important part. Few grain growers, especially the prairie provinces, have anything like adequate storage facilities, and the grain, as produced, is moved through a series of public elevators and warehouses, as well as over loading platforms, until finally placed in the holds of ocean-going vessels. For the calendar year ending December 1922, the total storage capacity of the 3,924 grain elevators and warehouses in Canada was 231,633,420 bushels, these figures being comparable with a total of 523 elevators and warehouses having a capacity of 18,329,352 bushels in 1901. For the purposes of grain shipment the country is divided into the eastern and western inspection divisions, the former including Quebec and the Maritime provinces and the portion of Ontario lying east of Port Arthur; the latter comprises the Northwest provinces and territories, British Columbia and that portion of Ontario lying west of and including the city of Port Arthur.

Shipment of Canadian Grain.—When grain was first shipped from western Canada it was hauled by the farmer, either loose or in sacks, to flat warehouses or simple wooden storehouses, built by grain dealers along the railway line. Elevators were introduced shortly after the year 1880. They were designed to take advantage of the flowing property of grain in bulk, and their equipment enabled the grain to be handled much more easily than was possible with the primitive warehouse. They have grown rapidly in number, whilst the old flat warehouse has practically disappeared. Dissatisfaction

[1]. See Canada Year Book, 1912, p. 450.

with the elevators on the part of farmers resulted in the introduction of what are called "loading platforms." The loading platform is a wooden structure on a siding on to which a farmer can drive his team and from which he can shovel the grain into the car. There are now in existence some 1,921 loading platforms, distributed as follows: Manitoba, 579; Saskatchewan, 874; Alberta, 461; and British Columbia, 7. They have a loading capacity of 4,498 cars simultaneously, and during the last crop year some 22,765,201 bushels of grain were handled over these platforms.

Grain Elevators.—As a general rule the elevators are owned and operated by commercial companies or farmers' co-operative companies. When the farmer takes his grain to an elevator he can either sell the grain to the operator, in which case it is called "street grain," or he can hire a bin in the elevator to keep his grain distinct from all other grain, in which case it is called "special binned grain," or he can store it with other grain of the same grade. If he stores the grain either in a special or general bin, he arranges with the railway company for a car, and the elevator loads the grain into the car to his order. When the grain is loaded he can either sell it on the spot as track grain, or send it forward consigned on commission. The farmer hauls the grain unsacked, and bulk handling is universal. Under The Canada Grain Act the Dominion Government has power itself to erect and operate terminal grain elevators. One such elevator is in operation at Port Arthur, and 4 other government elevators are in operation at Moose-jaw Saskatoon, Calgary and Vancouver.

There are six different kinds of elevators defined in the Grain Act, viz., (1) "country elevators," situated at railway stations and receiving grain for storage before inspection; (2) "public elevators," which receive grain for storage from the western inspection division after inspection; (3) "eastern elevators," for the storage after inspection of eastern grown grain; (4) "terminal elevators," which receive or ship grain at points declared to be terminal; (5) "private terminal or hospital elevators," used for cleaning or other special treatment of rejected or damaged grain; under regulations governing sample markets all grain received into such elevators must be their own property, though the owner or owners of grain may contract for the handling or mixing of grain in such elevators; and (6) "manufacturing elevators," used or operated as part of any plant engaged in the manufacture of grain products in the western inspection division. Of these different kinds of elevators the most important, so far as the western grain trade is concerned, are the terminal elevators, which are situated at Fort William and Port Arthur, the twin cities at the head of lake Superior. They are called "terminal elevators," not because they are situated on lake Superior, or because they have been built at the lake terminal yards of the railway lines, but because the inspection of western grain ends at them. The grade given as it leaves the elevators at these points is the final grade, on which it is sold and delivered, both in Eastern Canada and in foreign markets. The grain stored in these elevators may be sold in Eastern Canada or

in the United States or in Europe, and may be shipped through either Canadian or United States channels. At the present time there are 11 of these terminal elevators (seven at Fort William and four at Port Arthur), and their total storage capacity is about 37,850,000 bushels, and 21 private terminal or hospital elevators with a capacity of 15,435,000 bushels (14 at Fort William and 7 at Port Arthur).

Grain Inspection and Grading.—All grain grown in Canada and shipped in car-load lots or cargoes from elevators is subject to government inspection and grading, and the grain is sold both at home and abroad on the inspection certificate entirely by grade and not by sample. As each car arrives at an inspection point it is sampled and graded by qualified samplers and inspectors appointed under the Act. When the grain arrives at the terminal elevators it is weighed, cleaned and binned according to grade under the direct supervision of the inspectors, and a warehouse receipt is issued by the elevator operator to the owner of the grain. When the grain is ordered out of the terminal elevator in car or cargo lots, it is again weighed and inspected, and it must be graded out as graded in; that is, if it was received into the terminal elevator as "No. 1," grain of equal quality must be shipped out. Thus the identity of grade of exported grain is carefully preserved through every stage of movement. The principal inspection point for western grain is at Winnipeg. The work is done by inspectors who are qualified by an examination held by the Board of Grain Examiners appointed by the Board of Grain Commissioners. Rules and regulations governing the duties of the above Inspectors are approved by the Grain Commissioners and the inspection is performed in offices rented by the Government in the Grain Exchange Buildings at Winnipeg and Fort William.

Description of Grades.—Under the Act, Canadian grain is divided into five general classes, viz., "No grade," "Condemned," "Rejected," "Commercial grade" and "Statutory grade." "No grade" means all good grain that has an excessive moisture, being tough, damp or wet, or otherwise unfit for warehousing. "Condemned grain" means all grain that is in a heating condition or is badly bin-burnt, whatever grade it might otherwise be. "Rejected grain" means all grain that is unsound, musty, dirty, smutty or sprouted, or that contains a large admixture of other kinds of grain, seeds or wild oats, or that from any other cause is unfit to be classed under any of the recognized grades. "Commercial grade" means grain which, because of climatic or other conditions, cannot be included in the grades provided for in the Act. More particularly it means that the grain of one year may vary from that of the preceding year, and that a proportion of it therefore cannot be dealt with under the grades laid down in the Act, and must be provided for by grades defined by the Standards Board, appointed under sections 48 to 51 of the Act. "Statutory grades" means grain of the highest grades which are defined by Parliament, embodied in the Grain Act. There are four of these grades for Manitoba spring wheat, three each for Alberta Red and White winter wheat and two for Alberta Mixed winter

wheat. In the same way there are statutory definitions of the highest grades of oats, barley, rye and flaxseed. Thus the statutory definitions can only be changed by Parliament; they do not vary with the crop, but are constant. The commercial grades, on the other hand, are fixed by the Standards Board, and may vary from year to year. The Act defines four grades of western spring wheat, viz., No. 1 Hard, No. 1 Northern, No. 2 Northern and No. 3 Northern, whilst the Standards Board has defined three additional grades, viz., No. 4 Northern, No. 5 Northern and No. 6 Northern. But wheat of any of the six grades of Northern may fall under the general categories of "no grade," "condemned," or rejected." Grain, as inspected and graded at Winnipeg, is received into the terminal elevators, but is again finally inspected and graded in bulk as it is loaded into the lake steamers. For this final grading the grain is sampled at three places, viz., in the tunnels as the grain flows from the storage bins to the working house, on the floor of the working house and on the steamer as it pours from the shipping bin to the hold.

Recent Developments.—The construction of the Panama Canal has necessitated the provision of elevator and inspection facilities for grain to be shipped by this route. To meet the new requirements it has been decided to erect at the Hudson bay and Pacific coasts transfer elevators similar to those at Montreal, Halifax and St. John, and at strategic points in the interior, terminal elevators similar to the elevators at Fort William and Port Arthur. Elevators have been erected at Moosejaw, Saskatoon, Calgary and Vancouver. The first two have been in operation since October 1914; while the Calgary elevator commenced operations in September 1915 and the Vancouver elevator in November 1916. These have a total storage capacity of 10,750,000 bushels. These elevators bring the work of inspection somewhat nearer to the grain-growing area. In addition, they provide, for the first time in Western Canada, hospital apparatus upon the grain field to treat damaged grain. The elevators also give a certain amount of additional storage capacity, which is useful in periods of congestion. Besides, they place in the hands of the producer a commercial document in the shape of a warehouse receipt to enable him to realize money on his product at the current rate of interest and dispose of it as he sees fit. It was not intended that these elevators should take the place of the Lake terminal elevators for grain shipped east, or that they should be very much utilized for east-going grain during the period of navigation on the Great Lakes. They were built partly because of the need of hospital apparatus on the grain-growing area, partly because of the advisability of having some reserve storage for time of emergency, and partly because of the necessity of providing for the Panama Canal route in a way that would give the route a fair trial. During the past year this route has become a large factor in carrying grain to Europe. The enormous quantity of grain grown in Western Canada and the difficulty of shipping it all by the eastern route—a difficulty enhanced by the shortness of the period of

navigation and the long rail haul from the grain fields to the Atlantic—constitute conditions which have led to the hope that the Panama Canal will be an immense gain to the grain growers of Alberta.

Table **28** shows for the license years 1901 to 1922 the number of railway stations at which elevators are placed, the number of elevators and warehouses and their total storage capacity, the figures being given by provinces for the country elevators of the west, and by description of elevators for the rest of the country. Tables **29** and **30** give statistics of the inspection of grain for the fiscal years 1920, 1921, 1922, and 1914-22 and Tables **31** and **32** of the shipment of grain by vessel and rail for 1920 and 1921.

BOUNTIES.

The only bounties being paid by the Dominion Government in 1921-22 are for the production of crude petroleum, zinc and linen yarns. Bounties on iron and steel ceased in 1911 and on lead in 1918. The total paid on lead bounties from 1899 to 1918 amounted to $1,979,216 for 1,187,169,878 lb. of lead.[1] For crude petroleum the amount paid in 1921 was $101,765 on 6,784,333 imperial gallons, being at the rate of 1½ cents per gallon and making the total paid from 1905 to 1921 $3,119,201 on 207,946,778 gallons. Zinc bounties are granted under the provisions of the Act, 8-9 Geo. V. c. 51, not to exceed $400,000 to 31st July, 1920. The bounty paid equals the difference between the standard market price of zinc and 9c. per lb. There was paid in 1918-19 the sum of $108,563 on 10,107,704 lb. of zinc sold; in 1919-20 there was paid $249,246 on 15,186,694 lb. of zinc sold and in 1920-21 there was paid $42,191 on 3,635,199 lb. of zinc sold. Total amount paid $400,000 on 28,929,597 lb.

The total amount of bounties paid from 1896 to 1921 was $22,657,453; of this amount $16,785,827 was for iron and steel; $1,979,216 for lead; $3,119,201 for crude petroleum (Table 33); $367,962 for manila fibre; $400,000 for zinc; and $5,247 for linen yarns in 1921. The Year Book of 1915, pages 459 and 460, gave a description of the bounties that have been payable since 1883, as well as tables showing for each commodity the quantities on which bounties were annually paid, and the amounts of such bounties for the years 1896 to 1915 inclusive.

33.—Bounties paid in Canada on Crude Petroleum, 1905-1921.

[1]Statistics of bounties paid on lead are given by years on p. 454 of the 1920 Year Book.

THE COMMERCIAL INTELLIGENCE SERVICE.

The Commercial Intelligence Service maintained by the Department of Trade and Commerce is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets, and the current demand or opportunity for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets. These reports, inquiries, etc., are summarized weekly in the Commercial Intelligence Journal issued by the Commercial Intelligence Service at Ottawa, which is supplied gratis to Canadian manufacturers and other interested.

Canadian Government Trade Commissioners are stationed in the United Kingdom at London, Manchester, Liverpool, Bristol and Glasgow. They are also located at Bridgetown, Barbados; Kingston, Jamaica; Buenos Aires; Rio de Janeiro; Shanghai; Havana; Paris; Rotterdam; Milan; Yokohama; Auckland, New Zealand; Cape Town; Calcutta; Singapore and New York. There are in addition Canadian Commercial Agents in Sydney, N.S.W., Christiania and Nassau, Bahamas. Under an arrangement made by the Minister of Trade and Commerce of the Dominion of Canada with the British Foreign Office in 1912, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from H.B.M. Consuls in Chile, Colombia, Ecuador, Egypt, Mexico, Panama, Peru, Portugal, Spain, Sweden, Switzerland, Uruguay and Venezuela.

PATENTS, COPYRIGHT, TRADE MARKS, ETC.

Patents.—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies and beyond, are in Canada a purely statutory grant and have been so from the first. The earliest act is one of Lower Canada, passed in 1824, wherein provision is made for the granting of patent rights to inventors who are British subjects and inhabitants of the province. Upper Canada passed its Act in 1826 and Nova Scotia and New Brunswick passed theirs at later dates. After the Union a consolidating act was passed in 1849, applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial acts and has formed the basis of all succeeding acts.

The Patent Act as it now stands (R.S.C., 1906, c. 69), provides in section 7 that "Any person who has invented any new and useful art, machine, manufacture, or composition of matter, which was not known or used by any other person before his invention thereof, and which has not been in public use or on sale with the consent or allowances of the inventor thereof, for more than one year previous to

his application for patent therefor in Canada, may...obtain a patent granting to such person an exclusive property in such invention." The exclusive right in the patent has duration for eighteen years.

The first Canadian patent was issued under the Lower Canada Act of 1824 to Noah Cushing of Quebec. 165 patents were granted under the Acts of Upper and Lower Canada, and under the consolidating and later Acts of the provinces of Canada 3,160 patents were granted. The growth of invention is shown by the fact that in 1921 alone, 1,645 Canadian patents were issued to Canadians by the Patent office.

Applications for patents in Canada from inventors in other countries were first received in 1872. In that year the total number of applications for patents made to the Canadian Patent Office, Department of Agriculture, was 752, and the total fees amounted to $18,652. The business of the Office has continued gradually to expand, and the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year ended March 31, 1913, when 8,681 applications were received, and the total fees amounted to $218,125. In 1921 there were 13,446 applications with fees amounting to $344,712. For the fiscal year ended March 31, 1921, the number of patents granted was 11,152. Of the patents granted, 7,744 or 69.44 p.c., were issued to United States inventors, 1,645 to Canadian and 786 to British patentees, while Germany with 287, France with 134 and Australia with 105 patents came next in number of patents issued. Table 34 shows the distribution of the Canadian patentees by province of residence for the years 1912 to 1921.

It will be seen from the table that the more populous provinces of Ontario and Quebec obtained the largest absolute number of patents, but a calculation of the number of patentees in relation to the census population shows that for the fiscal year 1921 the greatest relative inventiveness was displayed in British Columbia. Thus in this province, in 1921, one patent was granted to every 2,963 persons, the other provinces as regards the number of persons to each patent granted being placed in order as follows: Ontario, 4,144; Yukon, 4,157; Alberta, 4,633; Manitoba, 5,170; Saskatchewan, 6,366; Quebec, 7,134; New Brunswick, 11,754, Nova Scotia, 18,063 and P. E. Island, 44,307.

Copyrights.—The first Act of the Province of Canada relating to copyright was passed in 1841 (4-5 Vict., c. 61), allowing copyright to any resident of the Province on depositing with the Provincial Registrar a copy of the work and printing in the work a notice of the entry. In 1842 an Imperial Act (5-6 Vict., c. 45) gave to a work first published in the United Kingdom protection throughout the Empire. As at that time the United States had no agreement with the United Kingdom as to copyrights, United States publishers reprinted in cheap editions books copyrighted in the United Kingdom and many such books naturally found their way into Canada. By the Foreign Reprints Act of 1847 (10-11 Vict., c. 95), the Imperial Government made it possible for Canadians to secure these cheap editions on making provisions safeguarding the rights of the British authors. This was done by Canada in 1850 by an "Act to impose a Duty on Foreign Reprints of British Copyright Works" (13-14 Vict., c. 6) and the duty so imposed was continued by the first Dominion Act of 1868 (31 Vict., chaps. 54 and 56), the latter Act authorizing the Governor-in-Council to impose a duty not exceeding 20 p.c. *ad valorem* on such reprints and to distribute the proceeds among the owners of the copyrights.

By the B.N.A. Act exclusive legislative authority in matters of copyright was assigned to the Dominion Parliament. In 1875 an Act was passed (38 Vict., c. 88) allowing a copyright for 28 years to persons domiciled in Canada or in any British Possession, or who, being citizens of any country having an international copyright agreement with the United Kingdom, had registered their claim and complied with the usual conditions.

In 1886 an International Copyright Act (49-50 Vict., c. 33) was passed by the Imperial Parliament, giving to Queen Victoria the right to accede to the Berne Convention. As Canada thus became a member of the Berne Convention with the privilege of withdrawal, books published in Canada by Canadians secured the same privileges as books published first in the United Kingdom, an author of any country subscribing to the Convention obtaining in any other country in the union the same rights as an author of that country. An Imperial Act of 1911 set forth general copyright regulations for the Empire, but did not extend to any self-governing Dominion unless declared by the Dominion Parliament to be in force therein. No such declaration has been made by the Parliament of Canada.

At the present time copyright protection in Canada and throughout the British Empire in a literary or dramatic work may subsist by virtue of the British Copyright Statutes of 1842 and 1886, on condition that the work is first published within the Empire. The term of this copyright is the life of the author and 7 years after his death or 42 years from the date of first publication, whichever period is the longer.

A copyright restricted to Canada may subsist under the Canadian Copyright Act (R.S.C., 1906, c. 70). The work must be printed or produced and published in Canada and registered before publication. The term of copyright is 28 years, with a renewal period of 14 years in favour of the author if living or of his widow and children if he is dead.

The Copyright Act of 1921, which is not yet effective in Canada, sets down in section 4 of the qualifications for a copyright and in section 5, its duration. "Copyright shall subsist in Canada..... in every original literary, dramatic, musical and artistic work, if the author was at the date of the making of the work a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the Additional Protocol....or a resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death". Section 13 provides that if at any time the owner of the copyright fails to print the book in Canada and satisfy the reasonable Canadian demand therefor, anyone may apply for a license to the Minister administering the Act, who may, if the owner fails to print an edition, grant a license to the applicant on the latter paying a royalty to the owner.

Copyright protection is extended to records, perforated rolls, cinematographic films or other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union and the United States of America, as well as in Canada.

This Act has not yet been brought into force by Proclamation.

Copyright, Trade Marks, Etc.—The report for the year ended March 31, 1921, of the Copyright and Trade Marks Branch of the Department of Trade and Commerce shows that the fees received for copyrights, trade marks, industrial designs and timber marks amounted to $63,174 for the fiscal year 1920-21, as compared with $60,451 in 1919-1920, $40,179 in 1918-19, $32,265 in 1917-18, and $28,643 in 1916-17. Registrations of copyright in 1920-21 numbered 1,729 against 2,028 in 1919-20, 1,436 in 1918-19, 1,440 in 1917-18 and 1,384 in 1916-17; of trade marks 2,128 in 1920-21 against 1,735 in 1919-20, 919 in 1918-19, 987 in 1917-18; of industrial designs 316 against 186 and of timber marks 58 against 22.

Electric Light and Power.—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until September 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. The statistics published in connection with these Acts are given in Tables **35** and **36.**

The statistics of the total electric energy generated in Canada in 1919 and 1920 are contained in Table **37.** From these statistics it appears that out of a total production of electrical energy in 1920 amounting to 5,894,732,000 kilowatt hours, 1,019,572,011, or about 17.3 p.c., were exported.

TRANSPORTATION AND COMMUNICATIONS.

Canada is a country of magnificent distances, nearly 4,000 miles in length from east to west, its relatively small population of 8,788,483 being in the main thinly distributed along the southern borders of its vast area. Different parts of the country are shut off from each other by areas which are almost wildernesses, such as the region lying between New Brunswick and Quebec, and the vast areas north of lakes Huron and Superior, the latter dividing the chief industrial region of Ontario and Quebec from the great agricultural areas of the prairies. To such a country with such a population, producing, like our western agriculturalists, mainly for export, or, like our manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life. Before 1850, when the water routes were the chief avenues of transportation and these were closed by ice for several months, the business of the country may be said to have been during the winter in a state of stagnation or hibernation. The steam railway was therefore required for the adequate economic development of Canada, more particularly for linking up with the economic and industrial world the vast productive areas of the Canadian west, and thus promoting their development. The construction of the Canadian Pacific railway gave to Canada as an economic unit length, but it was "length without breadth." The building of the newer transcontinental railways has for the first time given the country breadth—a fact which in another ten years, as settlement fills the extensive areas thus opened up, will be more evident than it is to-day.

Railway transportation, though in many parts of the country essential, is nevertheless expensive, particularly in these last few years, and for bulky and weighty commodities. Hence new enterprises have either been undertaken or are under consideration for improving water communication, such as the new and deeper Welland canal, the deepening of the St. Lawrence canals, and of the channel between Montreal and Quebec, and the utilization of the Hudson Bay route for the transportation of western grain to the British and continental European markets.

Problems of transportation are, therefore, of vital importance in the economic life of Canada, occupying a large part of the time and thought of our Parliaments and public men. Scarcely less important,

from the social and from the economic point of view, is the development of methods of communication, in a country so vast and so thinly peopled. The post office has been a great, though little recognized, factor in promoting solidarity among the people of different parts of the Dominion, while telegraphs and telephones have gone far to annihilate distance, the rural telephone, in particular, having been of great social and economic benefit in country districts. That the use of the automobile has also been of great benefit in promoting social intercourse among the dwellers in rural districts is evidenced by the fact that in Ontario alone, 64,045 passenger cars were owned by farmers in 1921. The press, again, assisted by cheap telegraph and cable rates, and reaching through the mails all over the country, has been of great use in developing national sentiment. To sum up, it may be said that the progress of modern inventions, not least among which is the radiophone, now coming into use, is going far to eliminate that isolation and loneliness which in the past were such characteristic features of Canadian rural life, and have thrown their gloomy shadow across the pages of Canadian literature.

The statistics of transportation and communications comprised in this section include those of steam and electric railways, motor vehicles, express companies, canals, shipping, telegraphs, telephones and Post Office. The statistics of railways and canals, telegraphs, telephones and express companies, are taken from the reports of the Transportation Branch, Dominion Bureau of Statistics. The shipping statistics are taken from the Report of the Department of Marine and Fisheries and the Shipping Report issued by the Department of Customs. The postal statistics are from the Report of the Post Office Department.

STEAM RAILWAYS.

Historical.—The first Canadian railway was constructed in 1836, between St. Johns, Quebec, and La Prairie, with the object of shortening the journey between Montreal and New York. It was only 16 miles long and was operated by horses, for which locomotives were substituted in 1837. A second railway from Montreal to Lachine was opened in 1847, and a third line to St. Hyacinthe in 1848. In 1850, however, there were only 66 miles of railway in all Canada.

The railway era in Canada may be said to have begun in 1851, when an Act was passed providing for the construction of a main line of railway between the two Canadas. The result was the completion of the Grand Trunk railway between Montreal and Toronto in 1856, its extension westward to Sarnia in 1859, and eastward to Rivière du Loup in 1860. The Atlantic and St. Lawrence railway from Portland, Maine, to the Canadian boundary, was leased for 999 years, and in 1859, on the completion of the Victoria Bridge across the St. Lawrence at Montreal, the Grand Trunk had a through route 800 miles long from Portland to Sarnia. A line from Detroit to Port Huron was leased in 1859, the Champlain roads in 1863, the Buffalo and Lake Huron in 1867, while the Chicago and Grand Trunk was completed from Port Huron to Chicago in 1880. In 1881 the

Georgian Bay and Lake Erie system with 171 miles was incorporated, and in the following year the amalgamation with the Great Western (904 miles) took place, and the Midland system (473 miles) was incorporated into the Grand Trunk. In 1888 the Northern railway, which had been opened from Toronto to Barrie in 1853, and the Hamilton and Northwestern railway, were taken over by the Grand Trunk. In 1891 the completion of the St. Clair tunnel gave direct communication with the railways of the United States. In the seventies the gauge had been changed from the original 5′ 6″ to the standard gauge of 4′ 8½″.

The Intercolonial railway between the Maritime Provinces and Canada had been proposed as early as the thirties. In 1844 the Imperial Government made a survey for a military road, and in 1851 agreed to recommend to Parliament either a guarantee of interest or an advance of the sum required to build a railroad. Differences of opinion as to route resulted in the project falling through, but in 1853 Nova Scotia undertook to construct by 1862 a trunk line from Halifax to the New Brunswick frontier, with branch lines to Pictou and Victoria Beach. In both Nova Scotia and New Brunswick, however, the scheme of an Intercolonial railway broke down for lack of funds, and in 1867 there were only 341 miles of railway in the Maritimes—196 miles in New Brunswick, including lines from St. John to Shediac and from St. Andrews to Richmond; 145 miles in Nova Scotia, including lines from Halifax to Truro and Windsor, and from Truro to Pictou. These under the B.N.A. Act passed to the Dominion Government. The latter on its part undertook the completion of the railway, and in 1876 the line was opened. In 1879 the Rivière du Loup branch of the Grand Trunk was acquired, and in 1898 the Drummond Counties Railway from Chaudière Junction to Ste. Rosalie Junction was leased and running rights obtained from the latter point over the Grand Trunk tracks into Montreal, the Intercolonial thus becoming a competitor for the business of the commercial metropolis of Canada.

As early as 1849 a pamphlet published by Major Carmichael-Smyth advocated the construction of a Canadian Pacific railway nearly along the present route. In 1851 a Parliamentary Committee reported against the undertaking of the enterprise at that time. In 1871 the terms under which British Columbia entered Confederation pledged the Dominion to commence the Pacific Railway within two years, and complete it within ten years. The work of construction of the railway as a public work actually commenced in 1874, but was not very rapidly pushed forward. In 1880 the Government entered into a contract with the Canadian Pacific Railway Syndicate, granting to the syndicate all portions of the line completed or under construction, a cash subsidy of $25,000,000 and a land grant of 25,000,000 acres, free admission of materials for construction, and protection for 20 years against competing lines. The company on its side agreed to complete the railway to a fixed standard by May 1, 1891, and thereafter to maintain it efficiently. As a matter of fact the last spike on the main line was driven on Nov. 7, 1885. Like the Grand Trunk,

the Canadian Pacific railway now began to acquire small branch lines as feeders; among them being the North Shore, Quebec, Montreal, Ottawa and Ontario in 1881, the Winnipeg to Manitou line in 1882, the Ontario and Quebec, the Credit Valley and the Toronto, Grey and Bruce in 1883, the St. Lawrence and Ottawa and Manitoba Southwestern, 1884, the North Shore, Nova Scotia, in 1885, the Atlantic and Northwest, 1886, the West Ontario Pacific, 1887, the Sudbury and Sault Ste. Marie, 1888, the New Brunswick railway, the Columbia and Kootenay in 1890, the Montreal and Ottawa and Montreal and Lake Maskinonge in 1892.

The second transcontinental railway, the Canadian Northern, was begun in 1896 with the completion by Mackenzie and Mann of the 125 mile line of the Lake Manitoba Railway and Canal Company, chartered in 1889. Next were acquired the charters of the Winnipeg and Hudson Bay, the Manitoba and Southeastern, the Ontario and Rainy River, and the Port Arthur, Duluth and Western. Assisted by the Manitoba Government, which desired to establish competition with the Canadian Pacific railway, the Canadian Northern next secured the Manitoba lines of the Northern Pacific, and in 1902 completed its line from Winnipeg to Port Arthur. By securing guarantees of bonds from the Dominion and Provincial Governments it was enabled to complete the great scheme of a transcontinental road, opening up in Ontario and in the West large undeveloped areas which are now in process of settlement.

Before the continental ambitions of the Canadian Northern were generally understood, the question came up of building an additional transcontinental line. About the end of the century, the Grand Trunk began to look with envy at the large and increasing revenues drawn by the Canadian Pacific Railway from the great Northwest. In 1902, the Grand Trunk submitted to the Dominion Government a proposition to construct a line from North Bay to the Pacific Coast, provided that a grant of $6,400 and 5,000 acres of land per mile should be made. The Government in 1903 submitted a counter-proposition that the line, instead of terminating at North Bay, should be continued east to Moncton, New Brunswick, the eastern section from Moncton to Winnipeg to be constructed by the Government and leased to the Grand Trunk for a fifty-year period, the railway paying no rent for the first seven years and 3 p.c. on the cost of the railway for the remaining 43 years. The western half of the railway from Winnipeg to Prince Rupert was to be built by the Grand Trunk, the Government guaranteeing interest on bonds to 75 p.c. of the cost of construction, not exceeding $13,000 per mile on the prairie section and $30,000 per mile on the mountain section. This proposition was accepted and construction commenced on the National Transcontinental and the Grand Trunk Pacific.

With two new transcontinental main lines besides branches under construction, Canadian railway mileage was doubled between 1900 and 1915, increasing from 17,657 miles in the former year to 35,582 miles in the latter. The builders of the new lines, as well as the Canadian Government and people, had expected that immigration

of capital and labour from Europe would rapidly settle the areas tributary to the new railroads and give them abundant and lucrative traffic, as had been the case with the C.P.R. Instead the war came, and European labour and capital were conscripted for the struggle, immigration fell off, while cost of operation increased, owing to the scarcity of labour and material in Canada. The interest on the bonds had to be met, and in 1915 the Government felt it necessary to give assistance to the railways. In 1916, after having again made a loan to the Grand Trunk Pacific railway and the Canadian Northern Railway Company, a Royal Commission was appointed by Order in Council of July 13, 1916, to investigate: (1) the general problem of transportation, (2) the status of each of the three transcontinental systems, (3) the reorganization of any of the said systems, or their acquisition by the State and (4) other matters considered by the Commission to be relevant to the general scope of the inquiry. Alfred Holland Smith of New York, Sir Henry Drayton of Ottawa and Sir George Paish of London, England, were originally appointed to the Commission. On the resignation of the latter, William M. Acworth was appointed to take his place. The majority report of the Commission, which was signed by Sir Henry Drayton and Mr. Acworth, has formed the basis of the subsequent railway policy of Canada. Their recommendation was that the public should take control of the Canadian Northern, of the Grand Trunk Pacific and of the Grand Trunk proper; and that they should be administered on purely business principles by a Board of Trustees, such compensation as seemed proper to be decided by arbitration and given to the shareholders of the Canadian Northern and the Grand Trunk.

Canadian Government Railways.—The Intercolonial Railway, built as a condition of Confederation and completed in 1876, and the Prince Edward Island railway opened in April, 1875, have since their construction been owned and operated by the Dominion Government. In 1903 the Dominion Government undertook the construction of the eastern division of the National Transcontinental railway from Moncton, N.B., to Winnipeg, to be leased to the Grand Trunk Pacific Railway Company for a period of 50 years. On the failure of the latter company to take over the operation of the road when completed in 1915, the Government itself undertook its operation—expenditure up to March 31, 1921, $167,812,568. (Table 18). Thus on March 31, 1918, the Canadian Government railways had a total mileage of 5,150.08, comprising the Intercolonial railway, 2,305.23 miles; St. John and Quebec railway, leased under authority of Chapter 49 of the Statutes of 1912, 127·72 miles; Prince Edward Island railway, 313·82 miles; and National Transcontinental railway, 2,403·31 miles. Under Orders in Council of May 22, 1918, and August 30, 1918, the Moncton and Buctouche, the Elgin and Havelock, St. Martin's railway, the York and Carleton railway and the Salisbury and Albert railway were taken over. Also, under Order in Council of December 1, 1919, the Lotbinière and Megantic railway; under Order in Council of June 10, 1920, the Caraquet and Gulf

Shore railway and under Order in Council of June 12, 1920, the Cape Breton railway, were incorporated in the Government railway system. The Hudson Bay railway with 332·5 miles of steel rail at the end of 1920, and 214 miles operated, out of its total length of 424 miles, has been declared to be comprised in the Canadian Government railways and is being operated to a limited extent by the board of directors of the Canadian Northern Railway. Its cost to Mar. 31, 1922, was $20,536,106, of which $14,346,116 was chargeable to the railway and $6,189,990 to the terminals at port Nelson. During the calendar year 1921 its gross earnings were $29,475, its working expenses $101,396—a deficiency of $71,921.

Canadian Northern Railway.—In pursuance of an Act passed in 1917 (7-8 George V, c. 24), intituled an Act providing for the acquisition by His Majesty of the capital stock of the Canadian Northern Railway Company, and an agreement entered into under the Act, the Government acquired the entire capital stock of the Canadian Northern Railway Company, except five shares issued in exchange for Canadian Northern Railway income charge convertible debenture stock. Having thus acquired control, the Government, in September, 1918, appointed a new board of directors of the Canadian Northern Railway Company. This board, under Order in Council of November 20, 1918, became also a board of management of the Canadian Government railways, with all the powers theretofore vested in the general manager of the Canadian Government railways. The use of the general term "Canadian Government Railways" to describe both systems was authorized by Order in Council of December 20, 1918, the corporate entity of each system being, however, preserved. The Canadian Northern system, at the time of its acquisition by the Government, had a total mileage of 9,566·5 miles.

The Grand Trunk Pacific.—During 1916, 1917 and 1918, the Grand Trunk Pacific received advances from the Government totalling $19,639,837 to enable it to "carry on" during difficult times. Towards the close of the fiscal year 1918-19, approximately $950,000 of the $7,500,000 authorized in the estimates of that year remained unexpended. The company desired to use this to pay interest on Grand Trunk Pacific Debenture Stock, but the Government insisted that deficits in operation should have priority over all other charges, and made the remittance conditional upon that understanding. As a result, the company notified the Government that it would be unable to meet the interest due on its securities on March 1, 1919. This was followed on March 4, by a notification from the company that it would be unable to continue operation of the railway after March 10. As it was necessary in the interests of the immense territories served by the railway to maintain the operation of the railroad, the Minister of Railways was appointed receiver from midnight of March 9, and for a time the road was operated apart from the Canadian National Railways. In October, 1920, the management was transferred to the Canadian National Railways, and 1921 was the first complete year of the operation of this road as an integral part of the Canadian National System.

The Grand Trunk.—The desire of the parent organization, the Grand Trunk, to be relieved of its obligations in respect of the Grand Trunk Pacific, led to negotiations early in 1918 for the taking over and inclusion of the Grand Trunk in the Government system of railways. These continued until October, 1919, and resulted in Chapter 17 of the 2nd Session of that year, an Act to acquire the Grand Trunk Railway System. This legislation provided for the sale and purchase of the preference and common stock, the value of which was to be determined by arbitration. On certain other stocks, namely, the 4 p.c. guaranteed stock and the debenture stocks, the Government agreed to guarantee the payment of dividends and interest, provided the voting powers exercised by the shareholders should cease on the provision of the guarantees. The guarantees were to take effect on the appointment of a committee of management representative of both the company and the Government. The committee of management, which consisted of C. A. Hayes and S. J. Hungerford, representing the Canadian National Railways, W. D. Robb and Frank Scott, representing the Grand Trunk, with President Howard G. Kelley, of the Grand Trunk, as chairman, held its first meeting on May 21, 1920, from which date the Government assumed its liability under the Act already referred to. The arbitrators appointed were Sir Walter Cassels, Chairman; Sir Thomas White, for the Government; and Hon. W. H. Taft, for the Grand Trunk. The arbitration proceedings commenced on February 1, 1921. The agreement under the Grand Trunk Acquisition Act limited the time for the completion of the arbitration proceedings to nine months from the date of the appointment of the arbitrators. The arbitrators had been appointed on July 9, 1920, and the arbitration proceedings had not been completed when the proceedings lapsed on April 9, 1921.

This difficulty led to further delay, and to reinstate the arbitration proceedings necessitated more legislation. With this in view, an Act respecting the Grand Trunk arbitration was put through and became law on May 3, 1921. This legislation provided for the reviving of the arbitration proceedings, conditional upon the resignation of the Grand Trunk English directorate, the substitution of a Canadian Board, and the establishment of the head office in Canada. The English directors resigned on May 26, and the Canadian Board was appointed, as follows:—Sir Joseph Flavelle, Bart., Toronto; Howard G. Kelley, Montreal; A. J. Mitchell, Toronto; E. L. Newcombe, K.C., Ottawa; and J. N. Dupuis, Montreal. The arbitration proceedings were revived on June 1, and the hearing finally concluded on July 8. The award was made on Sept. 7, the chairman, Sir Walter Cassels, and Sir Thomas White holding that the preference and common stocks of the Grand Trunk Company had no value in view of the financial condition of the Grand Trunk, consequent upon its Grand Trunk Pacific entanglements. Hon. W. H. Taft dissented from this finding, holding that the securities in question should be valued at not less than $48,000,000, his contention being that the preference and common stocks would be earning dividends in five

years' time. The acquisition agreement provided for an appeal on a point of law, and as the majority of the arbitrators had declined to hear evidence as to replacement value of the physical property of the system, an appeal was made to the Judicial Committee of the Privy Council. This appeal was dismissed on July 28, 1922.

The Grand Trunk lines, both in Canada and United States, are now Government-owned and are being operated in close co-ordination with the Canadian National Railways, but under separate management pending the taking over of operations by the new board of directors of the Canadian National Railways, whose appointment was announced by the Prime Minister on October 4, 1922. The new Board will have control of the unified management and operation of all Canadian Government railways.

Quebec Bridge.—The Quebec Bridge was built by the Dominion Government to replace the structure which fell during the erection in 1907. The contract for the substructure was let in 1909, and for the superstructure in 1911. The bridge was opened for traffic in October, 1917, although not entirely completed until August, 1918. It was officially opened by H.R.H. the Prince of Wales, on August 22, 1919. The main span is the longest in the world, being 1,800 feet centre to centre of piers, or 100 feet longer than that of the Forth Bridge in Scotland. The total cost of this structure to March 31, 1921, was $14,831,175. The bridge is of the cantilever type and carries a double track railway and accommodation for foot traffic, but no highway. The bridge forms a connecting link in the Canadian National Railway system, and is operated as a part of such systems.

Summary.—The operating mileage of the Canadian Government lines at December 31, 1921, was 17,338 miles. The gross earnings during 1921 amounted to $126,691,456, the operating expenses to $142,784,357, involving a loss on the operation of the system of $16,092,901 for the year as compared with $36,842,970 for 1920, or an improvement as compared with 1920, of $20,750,069. The Grand Trunk system, which is to be consolidated with the Canadian Government lines, has an operated mileage of 4,776. Its operating revenue (including the Central Vermont Railway system which is controlled by the Grand Trunk) was in the calendar year 1921, $109,097,558 as compared with operating expenses of $104,725,040, leaving a net revenue from railway operation of $4,372,518, a slight improvement as compared with the preceding year.[1]

The Board of Railway Commissioners for Canada.

In the early days of railway building in Canada, the provinces were more concerned with rapid development than with rate regulation. Under the Railway Clauses Consolidation Act of 1851, rates were fixed by the directors of the railway, subject to the approval of the Governor in Council. Beyond this, competition was relied upon to bring rates to a reasonable level. As time went on, however, those

[1] For detailed statistics of the operation of Government lines of railway in 1921, see the annual statement by the Minister of Railways and Canals in Hansard of April 11, 1922.

who believed in the efficacy of competition as a regulator were disillusioned. For example, complaints were made that the Grand Trunk gave low through transit rates, say from Chicago to New York, through Canada, and recouped itself by high non-competitive rates in Upper Canada. In 1888 the supervision of rates was given to the Railway Committee of the Privy Council, sitting in Ottawa.

At the turn of the century, two reports were prepared for the Department of Railways and Canals by Professor S. J. McLean, the first setting down the experience of railway commissions in England and the United States, and the second discussing Canadian rate grievances with a recommendation that regulation by commission be adopted in Canada. The second report found that non-competitive rates were exorbitant as compared with competitive ones and that the railways had exercised their right to vary rates without notice, to the great distress of shippers. Among the weaknesses of the Railway Committee as a rate regulating body was its fixed station at Ottawa, which made the cost of appearing before it practically prohibitive. Besides, members of Parliament had no necessary aptitude for dealing with railway rates, and of their two functions—political and administrative—the political was to them the more important.

The Board of Railway Commissioners for Canada, as provided for by the amended Railway Act of 1903, was organized on February 1, 1904. In the beginning, its membership consisted of a Chief Commissioner, a Deputy Chief and one Commissioner. In 1908 the membership was increased by the inclusion of an Assistant Chief Commissioner and two other Commissioners. According to the Act, the Board may be divided into two sections of three, but since any two members constitute a quorum, two commissioners usually hear all but the more important cases, and, agreeing, give the decision of the Board.

The powers of the Commission, in brief, are in matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special, freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones which must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for the changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission. It is a knotty question to mark the boundaries of competitive areas—to decide whether Nova Scotian manufacturers should be given rates which will allow them to compete west of Montreal, or again, whether high construction and operation costs in British Columbia should enforce a rate which prevents her goods from moving far into the prairies. By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to

the Commission, but with narrower powers than were given to it in dealing with railways.

The procedure of the Board is informal as suits the nature of its work, for experience has shown that hearings in strict legal form give the parties to the argument uncompromising attitudes. If possible, matters are settled by recommendations to the railway company or the shipper; thus, during 1921, 88 p.c. of the applications to the Board were settled without formal hearing. The Railway Committee had kept its station at Ottawa, giving only formal hearings, so that the grievances of those who could not afford to appear in person or pay a counsel went unredressed. The itineraries of the Railway Commission are arranged so that evidence may be taken at the least expense to those giving it.

Any one of the Chief, Assistant or Deputy Chief Commissioners, depending upon which one is presiding, gives final judgment on points of law. On questions of fact the findings of the Board are final and are not qualified by previous judgments of any other court. Questions of law and jurisdiction are differentiated. In the first case, the Board may, if it wishes, allow an appeal to the Supreme Court; in the second the applicant needs no permission to present his appeal.

The Railway Committee of the Privy Council being a committee of the Cabinet was responsible to Parliament. When the powers of the Committee were made over to the Railway Commission the responsibility was retained but necessarily by a different means. There is now provision for an appeal from any decision to the Governor in Council, who may also of his own motion interfere to rescind or vary the action of the Board, but the power to rescind or vary usually consists in referring a matter to the Board for reconsideration. In the period 1904 to 1918 there were appeals from 62 of the 6,900 cases given formal hearing, which is to say 0·9 p.c., and of these less than one-sixth have been granted.

Statistics of Steam Railways.

Mileage of Steam Railways.—The increase in the steam railway mileage of Canada for the calendar year 1920 was 326 miles, the largest increase since 1917. On December 31, 1920, the total railway mileage in operation was 39,384. Until 1919 the railway year ended on June 30, but in that year it was changed to the calendar year, consequently in most of the tables 1919 appears twice. Table 1 records the steam railway mileage in Canada as at the end of each railway year from 1835 to 1920, and Table 2 the steam railway mileage of Canada by provinces, as at the end of each railway year from 1914 to 1920.

Capital Liability of Steam Railways.—The capitalization of the steam railways of Canada as at the end of the railway years 1876 to 1920 is given in Table 3. In the latter year the total capitalization was $2,170,030,128. This amount included $1,323,705,962 of stock and consolidated debenture stock, and $846,324,166 of funded debt.

Statistics of Individual Companies.—Table 4 gives the mileage, capital liability (including funded debt), earnings and operating expenses of the steam railways of Canada for the calendar year 1920. The aggregate earnings were $492,101,104, as compared with operating expenses of $478,248,154, an operating ratio which is shown by Table 5 to have been 97.18 per cent.

Passenger and Freight Traffic.—Tables 5 and 8 present analytically the statistics of railway passenger and freight traffic in Canada during recent years. Table 5 shows that the ratio of operating expenses to receipts in 1920 was the most unfavourable of any year since 1901, largely on account of the tremendous wage bill for the year, as given in Table 9. Table 6 shows gross earnings, operating expenses and net earnings per mile of line and gross earnings and operating expenses per train mile. Table 7 shows the distribution of the operating expenses of steam railways for the last four railway years, while Table 8 gives a summary analysis of passenger traffic and freight traffic since 1910, and Table 9 shows the number of employees, their salaries and wages and the ratio of the latter to gross earnings and operating expenses for the railway years from 1907 to 1920. Table 10 gives statistics of mileage and railway stock from 1916 to 1920, and Tables 11 and 12 give the tonnage of the chief commodities hauled as freight on steam railways between 1917 and 1920, the last year being under a new classification of commodities.

Government Aid to Private Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through thinly-settled districts where little traffic was available, it was necessary for Dominion, Provincial and even Municipal Governments to extend some form of assistance. In our earlier history, when our Governments had plenty of Crown land and little cash, the subsidies granted to railways frequently took the form of land grants, which had the advantage of giving the railway a direct interest in opening up the country, though it sometimes led to the railways holding large tracts of land idle for speculative purposes when intermixed Crown lands had been homesteaded, thus retarding the settlement of agricultural land. Table 13 shows the areas of the land granted as subsidies to steam railway companies by the Dominion and Provincial Governments, with the names of the companies in the case of the Dominion Government. The total area so granted up to Dec. 31, 1920, extends to 58,121,916 acres.

As the country grew wealthier, the objections to the land grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan, or a subscription to the shares of the railway. From 1851 up to Dec. 31, 1920, as shown analytically in Table 14, the total value of such aid granted to steam railways in Canada, exclusive of the capital of two Government railways (I.C.R. and P.E.I.R.), amounted to $281,771,322. Of this sum $221,911,278 represents aid granted by the Dominion

Government, $43,469,371 that granted by the Provincial Governments, and $16,390,673, that granted by municipalities. Table **15** records the details of the most recent type of assistance given to private railways, viz., by the guaranteeing of their bonds or of the interest thereupon. These guarantees enabled the railways receiving them to borrow money, generally from British investors, at rates of interest considerably lower than would otherwise have had to be paid. Up to Dec. 31, 1920, guarantees amounting to $455,813,641 had been authorized by the Dominion and Provincial Governments, and guarantees amounting to $399,183,329 had actually been earned by the railways concerned.

Government Expenditure on Construction of Government Steam Railways.—In Table **16** are given statistics of the cost of construction (capital expenditure), the working expenses, revenue, and operating surplus or deficit of Canadian Government-owned railways by years since their commencement, with totals to the end of 1920. In Table **17** this total capital expenditure is divided up according to the railway lines on which the money was spent.

Railway Accidents.—In the past few years the attention of the public has been directed by the "safety first" movement to the prevention of accidents on railways as well as in manufacturing establishments. Table **18** gives in a summary form the statistics of accidents occurring in connection with steam railways in Canada from 1888 to 1920, while Table **19** includes the details of the accidents which took place during the last three railway years for which statistics are available.

1.—Record of Steam Railway Mileage, June 30, 1835-1919, and Dec. 31, 1919-1920.

Year.	Number of miles in operation.	Year.	Number of miles in operation.	Year.	Number of miles in operation.	Year.	Number of miles in operation.

NOTE.—The mileage shown in the United States relates entirely to lines which cross American territory in passing from one point in Canada to another; such lines, although not heretofore included in Canadian mileage, are operated wholly for the purposes of Canadian traffic. There is a large additional mileage in the United States, which is owned and operated by Canadian railways, but of which no account is taken in these statistics.

3.—Capital Liability of Steam Railways, June 30, 1876-1919, and Dec. 31, 1919-1920.

Year.	Stocks.	Funded Debt.	Total.	Year.	Stocks.	Funded Debt.	Total.

Sheep	70,125
Hogs	243,311
Dressed meats (fresh)	695,743
Dressed meats (cured or salted)	120,083
Other packing house products	489,734
Poultry	78,828
Eggs	90,461
Butter and cheese	196,957
Wool	101,533
Hides and leather	260,301
Other animal products	272,000
Total	**3,801,130**
Mineral Products—	
Anthracite coal	9,513,891
Bituminous coal	22,933,445
Lignite coal	240,249
Coke	1,109,449
Iron ore	899,546
Other ores and concentrates	2,127,184
Base bullion and matte	173,851
Clay, gravel, sand, stone (crushed)	4,473,155
Slate-dimension or block stone	1,216,140
Crude petroleum	1,051,006
Mine Products—concluded.	
Asphaltum	248,672
Salt	307,135
Other mine products	782,245
Total	**45,075,968**
Forest Products—	
Logs, posts, poles, cordwood	2,517,580
Ties	405,211
Pulp wood	3,932,206
Lumber, timber, box shooks, staves, heading	10,572,971
Other forest products	4,850,912
Total	**22,278,880**
Manufactures and Miscellaneous—	
Refined petroleum and its products	1,263,856
Sugar	1,166,039
Iron—pig and bloom	1,352,921
Rails and fastenings	751,077
Bar and sheet iron—structural iron	
pipe	2,231,908
Castings, machinery and boilers	1,325,906
Cement	1,176,451
Brick and artificial stone	1,912,172
Lime and plaster	276,039
Sewer pipe and drain tile	77,112
Agricultural implements and vehicles other than auto's	756,424
Automobiles and auto trucks	563,301
Household goods	197,727
Furniture	197,336
Liquor and beverages	279,063
Fertilizers, all kinds	222,552
Paper, printed matter, books	1,624,809
Wood pulp	1,877,805
Fish (fresh, frozen, cured, etc.)	182,943
Canned meats	10,992
Canned goods (all canned food products other than meat)	305,662
Other manufactures and miscellaneous	10,061,340
Merchandise	5,111,959
Total	**32,925,394**
Grand Total	**127,429,154**[1]

[1] Includes 42,803 tons not classified.

13.—Areas of Land Subsidies granted to Steam Railways by the Dominion and Provincial Governments up to December 31, 1920.

By the Dominion Government to:	Acres.
Alberta Railway and Irrigation Co.	1,101,712
Alberta Great Waterways Railway Co.	1,007
Canadian Pacific, main line	18,196,172
Calgary and Edmonton Railway Co.	1,817,700
Great North West Central Railway Co.	320,000
Manitoba North Western Railway Co.	1,500,992
Manitoba South Western Colonization Railway Co.	1,396,263
Saskatchewan and Western Railway Co.	98,880
C.P.R. Pipestone Extension, Souris Branch	200,094
C.P.R. Souris Branch	1,406,932
Canadian National—	
Canadian North Western Railway Co.	745
Canadian Northern Alberta Railway Co.	1,527
Canadian Northern Manitoba Railway Co.	73
Qu'Appelle, Long Lake and Saskatchewan Railroad and Steamboat Co.	1,622,922
Canadian Northern Railway Co.	3,789,721
Edmonton, Dunvegan and British Columbia Railway Co.	3,678
Grand Trunk Pacific	28,229
Grand Trunk Pacific Branch Lines	1,499
Total by Dominion Government	**31,488,146**
By Provincial Governments:	
Quebec	13,324,950
British Columbia	8,119,221
New Brunswick	1,788,392
Nova Scotia	160,000
Ontario	3,241,207
Total by Provincial Governments	**26,633,770**
Total area of Dominion and Provincial land grants to steam railways	**58,121,916**

14.—Analysis of the Total Financial Aid given to Steam Railways up to Dec. 31, 1920.

By the Dominion Government.	$	By Provincial Governments.	$
Cash subsidies	114,625,658	Cash subsidies	33,593,898
Loans	58,076,533	Loans	9,575,473
Paid to Quebec Government	5,160,053	Subscriptions to shares	300,000
Cost of lines handed over to C.P.R.	37,785,319	**Total**	**43,469,371**
Implement Clause of Grand Trunk Pacific	6,263,715	By Municipalities.	
		Cash subsidies	12,893,528
		Loans	1,071,645
		Subscriptions to shares	2,425,500
		Total	**16,390,673**
Total	**221,911,278**	**Grand Total**	**281,771,322**

15.—Aid to Railways in the form of Guarantees of Bonds, Interest, etc., by the Dominion and Provincial Governments up to Dec. 31, 1920.

Government.	Authorized.	Guarantees earned.
	$	$
Dominion	238,880,792	234,484,537

ELECTRIC RAILWAYS.

The cheap and reasonably rapid conveyance of human beings is a necessity of the modern urban life which falls to the lot of an annually increasing percentage of the population of Canada. This necessity of life is supplied throughout Canada by the electric street railway, generally operated by the development of the water powers which are so important a feature of Canadian economic life.

Historical.—Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years, their safety and convenience resulted in the discarding of the older system. An electric system, 7 miles in length was opened at St. Catharines in 1887, using the double overhead trolley. This was followed by the completion of the Ottawa Electric railway in 1891, and the electrification of the Montreal and Toronto systems in 1892. The street railways of other Eastern cities were generally electrified during the nineties, while in the newer western cities electricity was used from the commencement. In the cities of the East, electric street railways are generally operated by private companies under franchises from the city, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the city, a fact which is indicated for 1920 in Table **23** by the word "municipal" in the name of the railway. In 1921, on the expiry of the 30 year franchise of the Toronto Street railway, the line in this second largest city of Canada was taken over by the city and is now being operated by a transportation commission.

Where possible, water-power with turbine engines is used for generating purposes. Where this is not available, steam power is necessary and although a more expensive method, modern devices have greatly reduced the cost per h.p. Many difficulties are met in operating the cars during the winter season, due to snow, ice and sleet. These, however, have been overcome by the use of sweepers, scrapers and plows. The single overhead trolley system has been found the most suitable and is in general use.

Great advances have been made during recent years in the construction and use of suburban or inter-urban lines, their mileage

now comprising a large percentage of the total. The greatest part of this track is in the Toronto, Niagara and Lake Erie district, on which considerable freight traffic is carried, and on the Pacific coast, where the British Columbia electric railway operated 421 freight cars in 1920.

Development of Electric Railway Traffic.—Figures for the year 1893 show that 30 companies with a paid-up capital of about $9,000,000 operated 256 miles of railway. By 1897, 35 companies made returns showing 583 miles of track, 1,156 cars, 26,431,017 miles run, 83,811,306 passengers carried and capital of $18,727,355. In 1904, 46 companies showed 766 miles of track, 2,384 cars, 42,066,124 miles run, 181,689,998 passengers, and capital of $30,314,730. Steady increases up to 1920 show that during that year 66 companies actually in operation, with 2,427 miles computed as single track, 5,240 cars, 114,481,406 miles run and 804,711,333 fare passengers carried, had a capital of $170,826,404. The number of employees in the service of electric railways on Dec. 31, 1920, was 17,341 as compared with 16,940 in 1919. Total salaries and wages for the year 1920 were $24,235,932, as against $20,211,576 in 1919.

Statistics of Electric Railways.—Summary statistics of the operation of electric railways in Canada from 1901 to 1920 inclusive are given by years in Table **20.** In Table **21** statistics of the mileage and equipment are given for the last three railway years, and annual statistics of the capital liability of electric railways are furnished from 1908 in Table **22.** Detailed figures for railways of the miles operated, the capital liability, the earnings and operating expenses are given for 1920 in Table **23,** while Table **24** gives by years from 1894 to 1920 the number of passengers, employees and others killed and injured on electric railways in Canada.

20.—Summary Statistics of Electric Railway Operation, years ended June 30, 1901-1919, and for calendar years 1919-1920.

MOTOR VEHICLES.

The earliest motor vehicles were propelled by steam, the history of the gasolene motor car commencing with the construction of a successful gasolene engine by Daimler in 1884. Until 1900 France remained the headquarters of the industry, possessing in the latter year more than half of the 10,000 cars in operation in Europe, while in the United States the number of cars was only about 700. Shortly afterwards the invention of the Ford car resulted in a keen competition to bring motor cars within the reach of the average man, profits being secured from large production rather than high prices. Detroit became the centre of the automobile industry of the United States and the Canadian side of the Detroit river became the headquarters of the Canadian industry. As a consequence the population of such border towns as Windsor, Walkerville, and Sandwich has greatly increased in the past decade, while Ford City, which had no existence in 1911, had 5,870 inhabitants in 1921.

Like many other inventions, the motor car commenced as a toy, then as the luxury of the rich, while now it ranks as a comfort of those in moderate circumstances and may even become a necessity of life to the masses. Of late years it has been increasingly used for economic purposes and to-day the great majority of cars effect substantial economies in time or in money for their owners, partly or wholly offsetting their cost of upkeep. In the past few years, the motor truck—the freight automobile—has assumed considerable economic importance, and this year it is separately classified in Table **27** of this section.

The increase of the use of motor vehicles in Canada has been very rapid. In 1904 the number of motor vehicles registered in Ontario was only 535. In 1907, 2,130 motor vehicles were registered in six Provinces, and in 1908, 3,033 in eight provinces, the motor car being at that time prohibited in Prince Edward Island. From these small beginnings Table **26** shows an increase to 465,378 motor vehicles in 1921, an increase over 1920 of 58,314, or more than the total number of motor vehicles registered in 1913. In Table **27** are given the numbers registered by provinces in 1921, classified as passenger cars, commercial cars or trucks, and motor cycles.

According to statistics collected for 1920 by the National Automobile Chamber of Commerce of the United States, Canada in that year ranked next to the United States and Great Britain among the countries of the world in the number of its motor vehicles. In 1921 it possessed a motor vehicle for every 19 of its population.

In a recent government report the statement is made that "the automotive transport industry is just beginning to be a factor in the transportation of passengers and freight in this country. Railways have found that the handling of less than car-load lots of freight is often unprofitable business; it follows that commercial trucks are being used in greater numbers to carry lighter shipments of property between some of the larger centres served by adequately surfaced

highways." While the increased passenger and freight rates are probably the main cause of the comparatively slow increase in recent years in railway traffic (see Table 5 of this section), there can be no doubt that motor vehicles are now doing much transportation work formerly performed by steam and electric railways.

Motor Vehicles Acts and Regulations in Force.

The following is a brief synopsis of the laws and regulations in force in each province, and Table 25 summarizes the legal speed limits by provinces under the varying conditions specified.

Prince Edward Island.—Under the Motor Vehicles Act, 1913, with amendments and regulations, all cars must be registered in the office of the Provincial Secretary. In addition to the registration fee, an annual tax is payable on the 1st of May, but this is not required of non-residents unless the car is used in the province during more than four weeks in one year. All drivers of cars, owners included, must be eighteen years old and must be licensed. Every car must have a lock, or other device, to prevent it from being operated when left unattended. The speed limits are, in cities, towns and villages $7\frac{1}{2}$ miles an hour, in places which are closely built up 10 miles, where there is not a clear view of the road for at least 200 yards 12 miles, and in all other places 15 miles an hour. The number of cars registered in 1921 (up to December 31) not including dealers' registration was 1,751.

Nova Scotia.—The Motor Vehicle Act, 1918, requires cars to be registered by the Provincial Secretary, who issues permits renewable annually on January 1. Cars belonging to persons residing out of Nova Scotia need not be registered if cars are registered in the place where owners reside, and are used as passenger cars. This privilege is given for a period of not more than three months in each year. If owners come into the province to reside permanently or to carry on business they must register. No person under 16 may operate a motor vehicle, and paid chauffeurs must be at least 18 and must take out licenses. Cars must have devices which will prevent their operation when left unattended and must also have mufflers. The speed limits are, in cities, towns and villages and in places where there is no clear view of the road for at least 50 yards, 15 miles an hour, at cross-roads and bridges, 15 miles, and in other places 25 miles an hour. During 1921 the number of permits issued for cars was 14,205, including 155 motor cycles.

New Brunswick.—Under the Motor Vehicle Law, 1915, as amended May, 1917, the registering and licensing authority is the Department of Public Works. Cars must be re-registered every third year, and besides the registration fee, an annual fee is payable on January 1. Non-residents may operate cars registered in another province or state during not more than 21 days in any year without registration in New Brunswick. The driver of a car must be 18 years old, and must be the owner or a member of his household, a

licensed chauffeur or a person accompanied by a chauffeur; all chauffeurs must take out licenses and must pass a qualifying examination before issue of the license. The speed limits are, in cities, towns and villages 12 miles an hour, in places which are closely built up, 15 miles an hour, and in other places where the road cannot be seen clearly for 200 yards, 20 miles an hour.

Quebec.—The law as to motor vehicles is contained in the Revised Statutes, 1909, chapter 4, s. xxi, and amending Acts. Cars must be registered in the office of the Provincial Treasurer and re-registered annually on March 1. Save in the cases of taxi-cabs and auto-busses or similar vehicles which run daily or periodically between the province and neighbouring provinces or states, no registration in the province is required of cars registered outside the province, provided that similar exemption is granted by law of the state or province in which the tourist resides. All drivers of cars must be licensed, and must not be less than 18 years old. Cars, when left unattended, must be locked in such a way as to prevent their use, and all cars must have mufflers. The speed limits are, in cities, towns and villages, 16 miles an hour, on highways where the land is closely built up, 16 miles an hour, at bridges and cross-roads and within a distance of five hundred feet before reaching a railroad crossing, 8 miles an hour, and in open country 25 miles an hour. Motors must stop for street cars which are standing to take on or discharge passengers.

Ontario.—The Acts concerning motor vehicles are the Motor Vehicles Act, R.S.O., 1914, c. 207, the Highway Travel Act, R.S.O., 1914, c. 206, the Load of Vehicles Act, 6 Geo. V, c. 49, and the Public Vehicles Act, 10 Geo. V, c. 76, and amending Acts. The registering authority is the Department of Public Highways, which issues permits that remain in force for the calendar year. Cars may be used without registration for not more than three months in one year, if registered in some other province, or for 30 days in one year if registered in certain of the United States which have entered into agreement with the province of Ontario. No person under 16 years old may drive a car, and those between the ages of 16 and 18, as well as all paid chauffeurs, must be licensed. Cars must be equipped with mufflers. The speed limit in cities, towns, and villages is 20 miles an hour, in other places, 25 miles an hour, at road and intersections, one-half of these rates of speed. A motor may not pass a street car which has stopped for passengers to get on or off. At street intersections a vehicle approaching from the right has the right-of-way. All cars are required to be equipped with non-glaring headlights.

Manitoba.—Under the Motor Vehicle Act, cars must be registered in the office of the Municipal Commissioner, and the registration is renewable annually on January 1. Chauffeurs must not be under 18 years old, and must have licenses; other drivers must not be under 16 years of age. Cars must have mufflers and

devices to prevent their use when left unattended. The speed limits in cities, towns or villages are 10 miles an hour at street intersections and 15 miles an hour elsewhere. There is also a limit of 20 miles an hour in certain rural municipalities. Motors must stop when behind standing street cars. The provisions of the Act relative to registration and display of registration numbers do not apply to a motor vehicle owned by a non-resident of the province, other than a foreign person, firm or corporation doing business in the province, provided that the owner thereof shall have complied with the provisions of the law of the province, foreign country, state or territory of his residence relative to registration of motor vehicles and the display of his registration number thereon, and shall conspicuously display his registration numbers as required thereby. These provisions, however, shall be operative as to a motor vehicle owned by a non-resident of Manitoba only to the extent that under the laws of the province, foreign country, state or territory of his residence like exemptions and privileges are granted to motor vehicles duly registered under the laws of and owned by residents of Manitoba.

Saskatchewan.—The licensing authority under the Vehicles Act is the Provincial Secretary. Licenses expire annually on December 31. Every motor vehicle, except motor cycles, must expose two number plates: one on the front and one on the rear. Motor vehicles must carry lights at night, and the front lights must be dimmed to prevent glare. Motor liverymen must be licensed. Non-residents may use cars for 30 days under permit from the Provincial Secretary without registration in the province. No person under the age of 16 may drive a car, and paid chauffeurs must take out licenses. A chauffeur's license may be granted to applicants over 16 and under 18 on passing special examination test. Cars must have mufflers. There are no speed limits, but special precautions are prescribed against accidents. Motor vehicles must stop for street cars which are taking on or discharging passengers.

Alberta.—The law relating to motor vehicles is contained in the Motor Vehicle Act, 1911, and amending Acts, and the Highways Act, 1911. Cars must be registered, with descriptions, in the office of the Provincial Secretary, who issues certificates, which are renewable annually on January 1. Paid chauffeurs must be licensees, and all drivers must not be under 16 years old, if male, or 18 years if female. Cars must be equipped with mufflers. The speed limits are 20 miles an hour in cities, towns and villages, and 10 miles an hour at street crossings and bridges, while there is special provision for speed of fire vehicles going to fires. A motor car may not pass a street car which has stopped for passengers to get on or off. Regulations may be made by the Lieutenant-Governor in Council providing for permits to a resident of the United States or of any province in Canada who has complied with provisions of the law regarding registration of his motor vehicle in the state or province in which he resides, to operate an unregistered car in Alberta. Such exemption or privilege applies to such persons only to the extent to which

under the laws of the said state or province similar exemptions or privileges are granted with respect to motor vehicles registered under the laws of and owned by residents of Alberta. The same applies to drivers' licenses. The Provincial Secretary may revoke or suspend the license of any chauffeur convicted under the provisions of the Liquor Act of selling or having for sale intoxicating liquor. Provision is made for the impounding of cars by the authorities where the owners or drivers are convicted of driving cars while intoxicated or convicted under other sections of the Act relating to speeding and juvenile driving.

British Columbia.—Under the Motor Vehicle Act, and amending Acts, cars are required to be registered with the Superintendent of Provincial Police. Licenses expire on December 31. Foreign registered cars may be used for touring in the province under a touring license issued by the Superintendent of Provincial Police. Cars registered outside the province may be used for 90 days free. No person under the age of 17 may drive a car, and paid chauffeurs must take out licenses. The speed limits are: in cities, towns and villages, 15 miles an hour, in wooded country 15 miles, and in open country 30 miles an hour. A motor may not pass a standing street car at more than 5 miles an hour and must stop if it overtakes the car while taking on or discharging passengers.

Yukon Territory.—The Motor Vehicle Ordinance, No. 14, 1914, requires all cars to be registered in the office of the Territorial Secretary, who issues certificates, renewable annually on July 15. A non-resident may operate an unregistered motor for not more than 90 days. No male under 16, and no female under 18 years of age may drive a motor. In cities, towns and villages the speed limit is 15 miles an hour, or 10 miles an hour at street intersections.

EXPRESS COMPANIES.

"Express service is an expedited freight service on passenger trains." But express companies do not own the means of performing their services, they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning.

The Vickers Express Company, at first, did business as a stage company in south-western Ontario. Later it conducted an express business on the Toronto, Grey and Bruce and on the Northern railway. When the Canadian Pacific railway acquired the Toronto, Grey and Bruce, the Vickers Express Company did business for a time in the same car with the Dominion Express Company but soon went out of existence.

The Dominion Express Company had been incorporated in 1882 with a capital stock of $1,000,000. Between 1882 and 1904 the original shareholders assigned their stock to trustees, who thenceforth

held it for the C.P.R. The transfer of the stock became evident in 1904, when at a special meeting the shareholders of the company increased its capital to $2,000,000.

In 1865 the Canadian Express Company was incorporated with a nominal capital of $500,000, of which $275,200 was subscribed. In 1891 the Grand Trunk Railway Company purchased the capital stock for $660,000, and thenceforth the stock of the company was held for the Grand Trunk by trustees, all of whom were directors of the railway.

The Canadian Northern Express Company was incorporated in 1902 with a nominal capital of $1,000,000, of which $300,000 was issued. Five thousand dollars was paid in cash and the remainder was issued as paid up stock. Mackenzie, Mann and Company, Limited, received all but five $100 shares, which went to qualify directors. The connection between the railway and the express company consisted in the two companies having practically the same directors.

Since the taking over of the C.N.R. and the G.T.R. by the Government the express businesses of the two have been amalgamated to simplify matters. Beginning September 1, 1921, the operations of the Canadian Express Company and the Canadian National Express Company were consolidated under the name of the second, and the staffs of the two companies were rearranged, where necessary, to constitute the staff of the new company.

Before 1915, an express company in Canada was not liable for delay or damage caused by anything quite beyond its control, thus maintaining itself as an entity separate from the railway company. But in 1915 this liability was qualified, and thenceforth an express company became liable for delay or injury of goods if either were caused by the railway company in whose cars the goods were being carried.

Goods are sent by express for quick transit, so that express companies do not have to compete with freight rates by rail or water. Thus in its first tariff, the Dominion Express Company, in pursuance of its contract with the C.P.R., gave a rate of $2\frac{1}{2}$ times the maximum first class railway freight rate for the same goods carried the same distance. An express company usually pays the railway company a percentage of its gross earnings; for example, the Canadian Express Company paid the Grand Trunk 50 p.c. But the railway by controlling the stock has an additional revenue; and since express companies have little equipment but offices and, therefore, have slight expenses for upkeep, the railway receives in the end practically all the profits of the express company above bare operating expenses.

Express Company Operations.—There were operating in Canada in 1920, the last year for which the statistics of the Transportation Branch of the Dominion Bureau of Statistics are available, five distinctly Canadian express companies, viz., the Canadian Express Co., the Canadian National Expréss Co., the Central Canada Express Co., the Dominion Express Co., and the British America Express Co. They are organized under powers conferred by Acts

of the Dominion Parliament, and their business consists in the forwarding of parcels through the railway companies, in the transfer of luggage and in the issue of money orders, travellers' cheques, letters of credit and other forms of financial paper. Three other express companies situated in the United States, but consolidated during the war period, like the United States railways, under the operation of a single management appointed by the United States Government, and referred to here as "American Railway," also do business in Canada. The total capital liability of the five Canadian companies on December 31, 1920, stood at $4,918,800.

Statistics showing the operating mileage of express companies in Canada are given for the last four statistical years in Table **28**, of earnings by companies and of operating expenses in Tables **29** and **30** and of the express companies' business in financial paper in Table **31.**

28.—Operating Mileage of Express Companies in Canada, by Routes, by Provinces and by Companies, for the years ended June 30, 1918-1919, and for the calendar years 1919 and 1920.

CANALS.

Historical.—Before the period of extensive railway construction which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages. The canals of Canada were, in the main, constructed to eliminate the toil of unloading, transporting, and reloading at the portages.

The earliest mention of canals in Canada is in connection with the Lachine canal, begun by early French settlers in 1700, but only after the conquest of Canada by the British were improvements of the main water routes made, and in the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although for a time the canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country.

Canal Systems.—There are six canal systems under the control of the Dominion Government in connection with navigable lakes and rivers. They consist of the canals (1) between Port Arthur or Fort

William and Montreal; (2) from Montreal to the international boundary near lake Champlain; (3) from Montreal to Ottawa; (4) from Ottawa to Kingston and Perth; (5) Trenton, lake Ontario, to lake Huron (not completed); and (6) the St. Peter's canal from the Atlantic ocean to Bras d'Or lakes, Cape Breton. The total length of the waterways comprised within these systems is about 1,594 statute miles, the actual mileage of canals constructed being 117·2.

The St. Lawrence group, part of the Montreal to Port Arthur system, comprises seven separate canals at different points between Montreal and Prescott, not including the so-called "submerged" canal or channel dredged through shallow parts of the river between Montreal and Quebec. Chief of these is the Lachine canal, originally designed to be a mile in length, with a width of 12 feet and a depth of 18 inches. First opened in 1824 and finally completed in 1901, it is now navigable by vessels drawing 14 feet of water.

The Welland canal, connecting lake Ontario with lake Erie, overcomes their difference in level of 325½ feet. Commenced in 1824, it was opened in 1829, and has since been remodelled on several occasions. At present the channel from Port Colborne to Thorold is being altered to admit the passage of large lake boats, and a new channel from Thorold to a point 3 miles east of Port Dalhousie is in course of construction. The total distance traversed by the New Welland from lake to lake will be 25 miles. The difference of level between the two lakes, will be overcome by seven lift locks, each having a lift of 46½ feet. The locks are to be 800 feet long and 80 feet wide in the clear and will provide a depth of 30 feet of water over the mitre sills. The width of the canal prism is to be 200 feet. A new breakwater is being built at Port Colborne, extending 2,000 feet farther into the lake than the present breakwater. Extensive harbour works are contemplated for the lake Ontario entrance at Port Weller. It is expected that upon the completion of the New Welland there will be a reduction of about 2 cents a bushel in the freight rate on east-bound grain shipments and that a large proportion of Canadian grain now being shipped by Buffalo and New York will be diverted to the St. Lawrence route.

The Sault Ste. Marie canal, next in importance to the Welland in respect to tonnage carried, was opened for navigation in 1895 and has been of vital importance to the traffic in grain and iron ore on the Great Lakes. Although a marked decrease in tonnage is shown during the last ten years, much of this is due to the depression in the iron industry and to improved facilities offered by the American Sault Ste. Marie canal.

The Rideau Canal route [systems (3) and (4) above], comprising the canals on the Ottawa river, besides those between Ottawa and Kingston, was placed in operation to provide a safer route, for both military and civil purposes, than the St. Lawrence offered. Between the completion of the Rideau Canal in 1834 and the completion of the Grand Trunk railway between Montreal and Toronto, it was regularly used by tens of thousands of immigrants *en route* to Upper Canada.

The Trent canal, a partially completed route between Trenton, on lake Ontario, and Georgian bay, by way of Rice lake, the city of Peterborough and town of Lindsay and lake Simcoe, is as yet of little importance as a traffic route. The abundant power available at many points is, however, of great value to the Ontario Hydro-Electric Power Commission. At Peterborough the canal is equipped with the largest lift-lock in the world.

The St. Peter's canal, constructed between the years 1912 and 1917, connects the Bras d'Or lakes with St. Peter's bay on the south-east coast of Cape Breton island. It consists of a tidal lock 300 feet in length and 48 feet in breadth, and provides for a minimum depth of 18 feet of water on the lock sills.

Projected Canals.—Of the proposed canal schemes, the Georgian Bay route and the deepening of the St. Lawrence waterway are the most prominent. The former, first travelled by Champlain in 1615, from Montreal along the Ottawa and French rivers to Georgian bay, has been strongly advocated on numerous occasions. Its great cost, however, and the loss of time in locking, present serious drawbacks to the undertaking. The construction of the proposed deep waterway along the St. Lawrence from lake Ontario to the sea, for purposes of navigation and power development, has for the present been deferred, after consideration by the governments of Canada and the United States.

Canals and their Traffic Statistics.—In Table **32** are given the names and locations of the canals of Canada, their length and lock dimensions; in Table **33** statistics of canal traffic during the navigation seasons of 1920 and 1921. Following a decrease in the total tonnage passing through Canadian canals of 1,259,883 in 1920, the season of 1921 shows an increase of 671,638 tons over the previous year, this increase being due to heavy grain shipments on the Welland and St. Lawrence canals in 1921. Depression in the iron industry has caused decreases in traffic through both the Canadian and American canals at Sault Ste. Marie, though recent improvements effected in the American canal have led to a great falling off in the traffic of the Canadian canal, which in 1921 was only 4.68 p.c. of the amount in 1913, the record year. That canal traffic in Canada is mainly a matter of the summer and fall months is shown by the statistics of Table **34.** From Table **35** it is evident that farm products and mine products provide the chief traffic for Canadian canals. Table **36** gives the principal articles carried through Canadian canals in 1920 and 1921. Tables **37** and **38** contain the statistics of traffic through the Sault canal and through all Canadian canals for the years 1900 to 1921, inclusive, by nationality of vessel and origin of cargo. Table **39** gives statistics concerning the use of each of the Canadian canals during the navigation seasons 1914 to 1921. In Tables **40** and **41** are given statistics of the sums spent by governments before and since Confederation as current and capital expenditure on the canals of Canada.

Panama Canal.—The Panama canal, which was opened to commercial traffic on August 15, 1914, is a waterway which is destined to be of the greatest importance to the British Columbian ports from which vessels now leave direct for Great Britain and European ports throughout the year. During the war the great expectations based upon the opening of the Panama canal were not realized owing to the scarcity of shipping, but with the decline in ocean freight rates an increase in traffic between our Pacific ports and Europe is occurring. Statistics showing the amount of traffic through the Panama canal and the nationality of vessels passing through it are given in Tables **42** and **43**. The first cargo of Canadian wheat passed through the canal on February 9, 1921, on the steamer "Buenos Aires," of the Johnson line.

SHIPPING.

In the beginning of Canadian shipping furs were carried in canoes by water routes to the ocean ports. After 1665, Talon, as intendant, carried shipping a step beyond this by giving government aid to the building of ships for the West Indies trade and for the French navy, but the industry lost ground through the use of poor materials and the high cost of construction.

With the coming of the U. E. Loyalists and their establishment as farmers in what is now Ontario, western trade took on a different character and set aside the birch bark canoe for the bateau and Durham boat. The route from Montreal to the Upper Lakes was broken at three places—from Montreal to Kingston transportation was by bateau or Durham boat, from Kingston to Queenston schooners were used, then there was the portage road from Queenston to Chippawa and finally schooner again to the destination. The charge for transporting a barrel of rum from Montreal to Kingston was from $3.00 to $3.50 and freight charges on other goods were proportions of the rate on this standard article.

In 1809, the "Accommodation", the first Canadian steamship, was built for the Hon. John Molson to run between Montreal and Quebec. By 1818 Molson had formed a company, the St. Lawrence Steamship Company or the Molson Line. On lake Ontario, the "Frontenac", beginning with 1817, was used on a weekly service between York and Prescott, and following this beginning came a period of great activity in lake and river shipping. In 1845, the "Gore" reached lake Huron by way of the Welland canal to carry on transport trade in the Upper Lakes where previously there had not been enough traffic to support a large ship. Shipping on the Upper Lakes became brisker now, for there were settlers to be carried from Buffalo to the western United States and grain to be brought back. In this period Canadian shipping made its profit by carrying American goods, for there was little traffic originating in the Canadian near-West.

After 1850 there was railway competition to contend with. By 1852 Chicago was joined to New York and by 1854 Toronto to Collingwood and Hamilton to Windsor. The competition of railways meant the weeding out of the less efficient ships; passengers now forsook the steamships, and railways took over the transportation of perishable goods. But the new roads opened up traffic areas for water transport as well as for themselves; grain became an important article of lake transportation and the new ships were built for the carriage of bulky commodities.

The building of wooden ships had centered at Quebec ever since the beginnings were made by Talon. In 1825 ships having a tonnage of 24,592 were built there. From this time forth the industry maintained its position until the depression caused by the altered trade relations of Great Britain to Canada. Under the Reciprocity Treaty the industry revived, but after 1865 it declined and practically disappeared as steel ships became more common. Before 1800, fishing had occupied the seamen of the Maritime Provinces,

but in the nineteenth century larger ships were built for foreign trade. Until 1865 the shipbuilding industry advanced in those parts, but by 1871 iron hulls had replaced wooden ships, and further, the years of the Reciprocity Treaty had seen the exportation to the United States of practically all the Maritimes' hackmatac, which was the finest of all soft woods for shipbuilding. The building of passenger boats and freighters is carried on now at various ports on the Great Lakes; in British Columbia, where there is native coal and iron, ships are built, especially at Vancouver, Esquimalt and Prince Rupert.

Ocean shipping was begun only towards the middle of last century with the advent of steamships. In 1833, the Royal William, a Canadian ship, which had been built to ply between Quebec and Halifax, crossed the Atlantic from Pictou to London. A few years later, Samuel Cunard enlisted English capital and in 1838 obtained a seven years' contract from the British government to carry mail across the Atlantic. His company, the Cunard line, pursued a conservative course; wooden ships were built for it long after iron hulls were a proven success, likewise paddle wheelers when these had been largely replaced by twin screws. By 1867, the company's business had shifted to New York, and in that year the terminal was moved thither from Halifax. The Allan line had a somewhat similar early history, but it has maintained itself as a Canadian line, pursuing a more modest course than the Cunard in the size and speed of its vessels. Now both the C.P.R. and C.N.R. own ocean fleets as extensions to their railway systems.

The Department of Marine:—Administration of the general shipping interests of Canada is divided between the Marine Department and the Department of the Naval Service.[1] The Marine Department includes the control, regulation, management and supervision of various services, chief amongst which are (1) administration of the Canada Shipping Act and other Acts of the Dominion Government relating to marine transportation; (2) pilotage; (3) the construction and maintenance of lighthouses, lightships, fog alarms, buoys and beacons; (4) ports, harbours, piers, wharves and breakwaters; (5) the Meteorological Service of Canada; (6) sick and distressed seamen, and the establishment, regulation and management of marine and seamen's hospitals; (7) river and harbour police; (8) inquiries into the causes of shipwrecks and casualties and the collection of wreck statistics; (9) the inspection of steamboats; (10) the construction and maintenance of the St. Lawrence River Ship Canal and (11) the maintenance of winter communication between Prince Edward Island and the mainland. The net revenue of the Marine Department for the fiscal years ended March 31, 1920 and 1921, was $303,002 and $396,617 respectively, and the expenditure for the same periods was $38,301,080 and $26,038,902, as compared with $4,459,165 in the fiscal year ended March 31, 1919.

[1]For information relating to the Department of the Naval Service refer to heading "Naval Service of Canada," in the index.

Canadian Government Merchant Marine.—During the closing years of the war, the Dominion Government, realizing the need for a mercantile fleet, not only as a means of developing Canada's export trade but also as a means of assisting our national railways and of providing employment, placed orders with Canadian shipbuilding firms for the construction of 63 steel cargo vessels of 6 different types. These vessels were intended primarily to co-operate with British shipping in supplying the necessities of war, as well as to provide in times of peace the means of carrying abroad the products of Canada's farms, forests, mines and factories, without which Canada could not hope to take full advantage of the opportunity of expanding her export trade.

Prior to Dec. 31, 1919, 19 vessels had been delivered by the builders. During 1920 the total number delivered was increased to 47, while during 1921 an additional 18 vessels were completed, bringing the total at Dec. 31 of that year up to 65 vessels with a total deadweight tonnage of 380,097. In regard to ownership and operation, a separate company has been organized for each vessel and the capital stock of each is owned by the Canadian Government Merchant Marine, Limited. Under an operating agreement with each of these companies, the Canadian Government Merchant Marine, Limited, operates all of the steamers and keeps a separate account for each company. Promissory notes have been given to the Minister of Finance and Receiver-General for the total capital stock of each vessel, with interest payable at $5\frac{1}{2}$ p.c. per annum.

According to the second annual report of the Canadian Government Merchant Marine, Limited, a surplus of $1,004,233 (without provision for interest charges) is shown from the operations of this government-owned fleet as at Dec. 31, 1920. At the close of the third year of operation, however, as a result of the world-wide depression in the shipping industry and particularly of the addition of more ships to the fleet, the annual report as for Dec. 31, 1921, shows a deficit, after all charges, of $9,116,144. As a result, the Board of Directors has proposed the reduction of the number of vessels to 37, retaining only the larger, speedier and specialized ships, the reduction of the capital cost, (about $72,500,000) to what may be considered present replacement value (about $28,500,000), and the payment of interest to the government only if earned after allowing for depreciation.

At present, regular cargo services are maintained to points in the United Kingdom and European Continent, to Australia and New Zealand, to British India and the Straits Settlements, to the West Indies (which is also served by a three-weekly passenger service), to Newfoundland, to South America, to China and Japan and to California. In addition, voyages have been made to many points on the continent, Cuba, the East Indies, Russia and Egypt, exclusive of frequent coastwise service on the Atlantic. A few of the smaller boats have at times been moved to the Great Lakes to assist in the transportations of eastbound grain.

Offices of the company outside of Canada are located in London, in the West Indies, and in Australia, New Zealand and Newfoundland, while agencies give the company representation in all the principal shipping centres of the world.

Shipping Statistics.—Of the following Tables **44** to **51** are compiled from the shipping reports of the Department of Customs and Excise and Tables **52** to **59** from the reports of the Department of Marine. Table **44** gives summary statistics by nationalities of sea-going vessels, exclusive of coasting vessels, entered and cleared at Canadian ports during the fiscal years 1920 and 1921. Entrances and clearings of sea-going vessels at principal ports in the fiscal year 1921 are given in Table **45**, while Table **46** gives detailed statistics of sea-going vessels by countries, whence arrived and countries to which departed, for 1921. Tables **47** and **48** are historic tables, giving entrances and clearings for sea-going vessels and for sea-going and inland vessels, exclusive of coasting vessels, respectively, from the commencement of the century. Statistics of the coasting trade for the past five years are given in Table **49**, and statistics of the trade on the lakes and rivers between Canada and the United States in Table **50**. Statistics of vessels built and registered in Canada and sold to other countries are given in Table **51.**

In Table **52,** taken from the report of the Department of Marine, are statistics showing the number and net tonnage of vessels on the registry of shipping in Canada for 1916 to 1919, the figures showing the effect of the recent ship building programme. Table **53** shows steam boat inspections during the fiscal year 1919-1920. Table **54** shows the number of seamen shipped and discharged at Canadian ports from 1908 to 1919. Table **55** gives the Canadian wrecks and casualties up to 1920 and Table **56** shows the marine and danger signals from 1911 to 1920. Tables **57** and **58** show the current trend of the revenue and expenditure of the Department of Marine, the heavy expenditure in the fiscal years 1920 and 1921 being attributable to the large shipbuilding programme undertaken in those years. Table **59** is an historic table giving revenue and expenditure statistics of the Department of Marine since 1868.

44.—Sea-going Vessels (exclusive of Coasting Vessels) Entered and Cleared at Canadian Ports during the fiscal years 1920 and 1921.

1913	16,975	13,749	1919	18,208	13,649
			1920	22,569	19,719

Wrecks and Casualties.—The statement in Table **55**, supplied by the Department of Marine, applies to vessels of every nationality in respect of wrecks and casualties in Canadian waters and to Canadian vessels in respect of wrecks and casualties in other waters. The returns in some years cover wrecks and casualties of previous years.

55.—Canadian Wrecks and Casualties for 1870-1900, for the years ended June 30, 1901-1917, and for the calendar years 1918-1920.

Year.	Casualties.	Net tonnage.	Lives lost.	Stated damages.	Year.	Casualties.	Net tonnage.	Lives lost.	Stated damages.

[1]Nine months. [2]Includes $493,000 sale of steamer "Earl Grey", sold to Russian Government.

TELEGRAPHS.

Canada's first telegraph line was erected in 1847 between Toronto, Hamilton, St. Catharines and Niagara. In the same year the Montreal Telegraph Co. was organized, and a line built from Quebec to Montreal and Toronto. At the close of the year, the Montreal Telegraph Co., having absorbed the original one, had 540 miles of wire in use, 9 offices, 35 employees, and had sent out 33,000 messages. Equipment of very high quality was used by the early companies.

Development of new companies was rapid, new lines radiating from Montreal in all directions. The Grand Trunk Telegraph Co., with a line from Quebec to Buffalo, offered considerable opposition to the Montreal Co., and soon a combination of the two with the Great North Western Telegraph Co. was formed. This company controlled telegraph service in Canada until the building of the C.P.R. While private companies extended their service to meet the requirements of the more densely populated areas of the country, the Canadian Government built and operated lines in many other districts, 2,548 miles of wire being under government control in 1897. The Government lines existing prior to the taking over of the Canadian National and the Great North Western and the Grand Trunk Pacific Telegraph service were constructed largely for the purpose of supplying telegraphic service to outlying communities. On March 31, 1921, their system comprised 11,205½ miles of pole line, 13,645 miles of wire and 354½ miles of cables. They had 1,248 offices and in the fiscal year 1921 dispatched 636,471 messages as compared with 584,346 in 1920.

Telegraph Systems.—The Canadian telegraph system is composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Government system includes, besides the lines originally constructed by the Government, those previously owned by the Great North Western Telegraph Co., the Grand Trunk Pacific Telegraph Co., the Canadian Northern Railway Co., and the National Transcontinental Railway. The system is now operated by the Great North Western Telegraph Co., under the name Canadian National Telegraph Co.

The Canadian system, inproportion to population, is one of the most extensive in the world, and is maintained despite many considerable climatic and geographic disadvantages. In the operation of railways, the receipt and despatch of market reports and its usefulness to the press, its services to the nation are invaluable.

Submarine Cables.—Six transoceanic cables have a terminus in Canada—five of them on the Atlantic and one on the Pacific coast. The first date on which the cable was shown to be of commercial value was in 1866, and up to the present their use has greatly increased. The Atlantic cables are controlled by English and American interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902 and is owned by a partnership of the Governments of Great Britain, New Zealand, Australia and Canada.

Marconi Wireless.—Since the first transatlantic wireless message in 1901 and the organization in Canada of the Marconi Wireless Telegraph Co. in 1903, communication has been established between many stations throughout the country and with the outside world. Plans are at present under way for a wireless route which will encircle the world by means of stations in Canada and other parts of the Empire.

[1]Cablegrams not included.
[2]Statistics of lines in Ontario, Quebec and New Brunswick not included.
[3]Number of messages and offices included in returns from the Grand Trunk Pacific Telegraph Company.
[4]The decrease in wire mileage is due to the elimination of over 500 miles of metallic train despatching telephone circuits which are not used for the transmission of commercial messages.

Wireless Telegraph Coast Stations.—Table **62** shows the name, situation and range in nautical miles of the radiotelegraph or wireless telegraph coast stations, as operated by the Department of the Naval Service, and Table **64** the number of messages and words handled and the cost of maintenance for the stations of the east and west coasts and of the Great Lakes. For the year 1920-21 the total number of messages was 414,943, as compared with 341,333 in 1919-20 and of words handled 7,234,213, as compared with 6,128,990 in 1919-20. Table **63** gives the names of the Canadian Government steamers that are equipped with radiotelegraphic apparatus, with the range of miles for each steamer. A transatlantic wireless service is carried on by the Glace Bay, N.S., and Newcastle, N.B., Stations, which work with Clifden and Ballybunion, Ireland, respectively. A commercial wireless service is maintained via the Glace Bay Station, the charge being 18 cents per word as against 25 cents by cable. A commercial wireless service is maintained with Bermuda, via the Canadian Government wireless station at Barrington Passage, N.S., the rate charged per word being 28 cents as against 42 cents by cable.

TELEPHONES.

Telephone development in Canada dates from the year 1880, when the Bell Telephone Co. was incorporated by Act of Parliament. Although at this time all patents and lines were owned by the Canadian Telephone Co., they were dependent on the Bell Co., to which they sold out in 1882. By 1883 the first submarine telephone cable had been laid between Windsor and Detroit, and during the year the Bell Co. operated in Canada 4,400 rental earning telephones, 44 exchanges and 40 agencies, with 600 miles of long distance wire. It controlled development in all the provinces except British Columbia, where the greater part of the system has always been in the hands of the British Columbia Telephone Co., Ltd.

With rapid growth of private companies in the Maritime provinces the lines of the Bell Co. were disposed of in 1888, to the Maritime Telegraph and Telephone Co. in Nova Scotia, and to the New Brunswick Telephone Co. in New Brunswick, an interest in these corporations being retained under the terms of sale. A development of a different kind is seen in the three prairie provinces, where well organized systems were sold to the governments of Manitoba and Alberta in 1908 and to Saskatchewan in 1909. The lines in Ontario and Quebec are still largely owned by the Bell Telephone Co.

Telephone Systems.—In all the provinces, besides the large telephone companies, are many smaller systems, both urban and rural, usually owned privately or co-operatively. The number of independent lines is particularly large in Saskatchewan. The steady growth in the use of telephones is shown in Table **67**, particularly by the increase of 77,508 telephones in 1920 as compared with 1919. For each 100 of population, there were 9·8 telephones in use during 1920, over 40% of the total being in Ontario. In this respect Canada ranks second among the countries for which such data is available.

Telephone Statistics—Telephone statistics for 1920, published by the Transportation Branch of the Dominion Bureau of Statistics, show a considerable increase in telephones during the year, especially when the increased rates are considered. These statistics are summarized in the following tables which also give comparative figures for preceding years. The term capitalization as used in Table **65** includes both capital stock and funded debt. Table **66** gives statistics of the number of telephone companies reporting to the Department of Railways and Canals, the remarkable feature being the growth of the number of co-operative companies since 1911. Table **67** furnishes statistics of instruments in use and mileage of wire since 1911, while Table **68** gives financial statistics of Canadian telephone systems since 1912. Interested persons are referred to the Bureau's report on telephone statistics for more detailed information.

[1]As the head office of the Bell Telephone Company is situated in Montreal, its very large business is necessarily accredited to Quebec, though largely transacted outside of that province.

THE POST OFFICE.

A postal service was established between Montreal and Quebec as early as 1721, official messengers and other travellers making a practice of carrying letters for private persons. When Canada came under British rule, the Post Office was placed on a settled footing by Benjamin Franklin, then deputy postmaster-general for the American colonies, who visited Canada in 1763, opened post offices at Quebec, Montreal and Three Rivers, and also established courier communication between Montreal and New York. Since 1755 Halifax had had a post office and direct postal communication with Great Britain.

As a consequence of the outbreak of the American Revolution, the first exclusively Canadian postal service, a courier route from Halifax to Quebec, was established, involving a seven weeks' trip and expenses of about £200, of which only one-third was met by postal charges. Up to 1804 the postal facilities of Upper Canada consisted of one regular trip by courier each winter with whatever mail might reach Montreal during the season of navigation. Charges were necessarily high, $1.12 being paid on ordinary letters from London to Toronto *via* Halifax.

The first post office in Toronto was opened about 1800. By 1816 there were 19 offices in the two Canadas, and in 1827 this number had increased to 114. At this time the system consisted pr marily of a trunk line of communicat on between Halifax, Quebec, Montreal, Toronto, and Amherstburg, over which couriers travelled at varying intervals. Branching off this line were routes to Sorel, Sherbrooke, St. Johns, Hull, Hawkesbury, Perth and Richmond, with most deliveries made once or twice a week.

Hitherto the Post Office had been under the control of the Imperial Department, but considerable agitation resulted in the service being transferred on April 6, 1851, to the several provinces. Only enough mutual control was maintained to ensure the continuance of Imperial and intercolonial relations. The provinces had complete jurisdiction over the establishment and maintenance of systems and rates.

At Confederation the provincial systems were transferred to the Dominion. The Post Office Act of 1867 established a service throughout Canada. The domestic rate on letters was reduced from 5 to 3 cents per half-ounce and in 1870 the rates to the United States and Great Britain were reduced from 10 to 6 cents and from 12½ to 6 cents respectively per half-ounce. In 1875 a convention between Canada and the United States reduced postal rates between the countries to the domestic level. In 1878, on the admission of Canada to the Postal Union, letter postage to the countries of the Postal Union was reduced to 5 cents per half-ounce. After a conference in 1897 Imperial penny postage (2 cents per half-ounce) was established on Dec. 25, 1898, while the domestic rate was reduced from 3 to 2 cents per ounce. These rates were maintained until 1915, when a 1 cent war tax, still in force, was imposed on all 2 cent letters, on post cards and postal notes. Recently the rate to Great Britain has been increased to 4 cents per ounce and that to the Postal Union has been raised to 10 cents per ounce.

The Post Office Department is administered by the Postmaster-General. Besides the several administrative branches within the Department, the Dominion is divided into 15 districts, each in charge of a Post Office Inspector. The Canadian system embraces a territory more extensive than that served by any other systems except those of the United States and Russia, and must do this with a much smaller population.

Money Order and Savings Bank Services.—The auxiliary postal services—the money order service and post office savings bank—have expanded enormously between Confederation and the present time. In 1868 there were 515 Money Order offices in operation, issuing orders to an amount of $3,342,574. In 1921, these figures had increased to 5,197 and $173,523,322. The Post Office savings banks were established in 1868, deposits for the first year being $861,655. In 1921 the 1,328 banks in operation showed deposits for the year of $6,631,685, and total balance due to depositors of $31,605,594.

Rural Mail Delivery.—A system of rural mail delivery was inaugurated in Canada on October 10, 1908, limited at that time to existing stage routes, persons residing on such routes being entitled to have mail boxes put up in which the mail carrier was to deposit mail matter and from which he was to collect mail matter and carry it to the post office. As a consequence of the public approval of this scheme new regulations, taking effect on April 1, 1912, made all persons residing in rural districts along and contiguous to well defined main thoroughfares of one mile and upwards eligible to receive their mail in this manner, while couriers of rural mail routes were also required to sell postage stamps and take applications for and accept money, money orders and postal notes. The result has been an increase in the number of rural routes from approximately 900 in 1912 to 3,750 in 1921, having 194,790 mail boxes as against approximately 25,000 in 1912. The establishment of these routes has been an important factor in the recent amelioration of the conditions of Canadian rural life.

Postal Statistics.—During the fiscal year 1921 there was an increase of 407 miles in the system over which the mails are carried by railway, bringing the total actual track mileage for the carriage of mails on March 31, 1921, to 35,949 miles. The total mileage of mail conveyance by railway was 41,215,804 miles as against 39,355,268 in the previous year, indicating reasonably, rapid expansion in the postal service. Statistics of the number of post offices in operation on March 31, 1921, are given in Table **69**, of postal revenue for 1920 and 1921 in Table **70** and of revenue and expenditure of the Post Office Department since 1890 in Table **71**. A list of mail subsidies and steamship subventions is given in Table **72.** Table **73** is an historic table showing the operation of the money order system from 1901, while Table **74** gives detailed statistics of money orders for recent years. Table **75** deals with the number and value of postal notes in recent years and Table **76** with the issue of postage stamps in the past two fiscal years.

XI.—LABOUR, WAGES AND PRICES.

OCCUPATIONS OF THE PEOPLE.

The occupations of the people of a country at any given time are mainly determined by its natural resources and the stage which has been reached in their development. The outstanding characteristics of Canada are its enormous extent, its immense natural resources and the comparatively slight development of these, only the southern portions of the country being as yet at all developed. The developed areas fall into four economic units with quite distinct physical characteristics, first, the Maritime Provinces, where lands, forests, mines and fisheries are the chief natural resources; secondly, Ontario and Quebec, with lands, forests, mines and abundant water power for manufacturing purposes; thirdly, the Prairie Provinces, where the land is the chief natural resource except in Alberta, which contains immense coal deposits; lastly, British Columbia with fisheries, forests, and mines, where agriculture plays a comparatively minor part. Though, when the country as a whole is considered, the immense fertile areas of arable land must be considered as its chief natural resource, in different parts of its vast expanse other resources predominate, and give the key to the chief occupations of the people.

In Canada, as in other new countries, the labouring population (using the term in its widest sense) bears a larger proportion to the total than is the case in older civilizations where there exists more realized wealth.

In addition to our native-born workers, great numbers of young males and smaller numbers of females, who have nothing to sell but their personal services, immigrate from older countries to Canada to find here a better market for their labour. Thus both the sex distribution and the age distribution of the population of Canada is rendered somewhat abnormal, an unusually large percentage of that population being of working age and of the male sex—that is, of the sex which is most generally gainfully employed.

These statements may be illustrated from the Canadian census of 1911. (See Table **1**). In that year out of a total population 10 years old and over of 5,514,388 in the nine provinces, 2,723,634 were returned as gainfully employed, being 49·39 p.c. of such population, or 37·93 p.c. of 7,179,650, the total ascertained population of the nine provinces. Thus, three out of every eight persons in the Dominion were gainfully employed, or four out of every eight persons ten years old and upwards.

Male Labour.—Considering the male population of 10 years old and upwards, it was found at the census of 1911 that no less than 79·54 p.c. or nearly four-fifths were gainfully employed. Further, if we take out those under 15 as being more properly at school training for the future than gainfully employed in the present and those over 65 as having earned the right to rest, we find that of the total male population between 15 and 65 no less than 92·73 p.c. was gainfully employed, a percentage which is increased to 96·28 p.c. if we con-

sider only those in the main productive 40 year period between 25 and 64 years old inclusive. Thus Canada is shown by its statistics to be emphatically, in so far as the males are concerned, a workers' country.

Female Labour.—The growth of the employment of females in gainful occupations between 1891 and 1911 is shown in Table 2. The figures found there may be supplemented by the information that in 1891, 11·07 p.c., in 1901, 12·01 p.c., in 1911, 14·31 p.c. of the female population 10 years old and over were gainfully employed —an increase from one-ninth to one-seventh of the female population of these ages during the 20 year period—a rate of increase which, in view of the labour conditions of the war and reconstruction period, will probably be found to have been maintained in the present decade.

It is significant that among females the age period during which there is the maximum of gainful employment is shown by the census to be that from 15 to 24 years inclusive. Of the female population of these ages, 27·78 p.c. were in 1911 gainfully employed, a percentage which fell to 12·14 p.c. for the period 25 to 64 years inclusive. As every employer of female labour knows, the decline is due to the absorption of female labour by marriage and home duties.

[1]Workers were not classified by sex in 1881.

Distribution of Labour Force by Industries.—The distribution of the Canadian labour force by industries at the censuses from 1881 to 1911 is given by numbers and percentages employed in Table 3. The most notable features of this table are the great absolute increase of 52·7 p.c. between 1901 and 1911 in the gainfully employed population, the comparative decline of the agriculturists (in spite of the large absolute increase in their numbers) from 48·1 p.c. of the occupied population in 1881 to 34·3 p.c. in 1911, the increase of manufacturing workers from 11·7 to 18·0 p.c., of the traders from 5·7 to 10·4 p.c. and of transportation workers from 2·9 to 8·0 p.c. of the occupied population in the 30 year period. It should, however, be borne in mind that under present day conditions of specialization in industry many of those employed in trade, transportation and manufactures are doing work which formerly was performed by agriculturists and other primary producers for themselves.

Distribution of Labour Force by Provinces.—The extremely varied character of the occupations of the Canadian people, as conditioned by the various utilized natural resources of our immense territory, may be illustrated by reference to Table 4, which shows that in 1911 out of every 1,000 gainfully employed males, the number employed in agriculture varied from 127 in British Columbia to 673 in Saskatchewan and 684 in Prince Edward Island. Only 1 out of every 1,000 gainfully employed males was employed in mining in Prince Edward Island and 3 in Saskatchewan, as compared with 82 in British Columbia and 115 in Nova Scotia. In forestry only 2 out of every 1,000 were employed in Saskatchewan, Manitoba and Prince Edward Island, as compared with 62 in British Columbia. In fishing and hunting, the variation was from 3 per thousand in Manitoba to 98 per thousand in Nova Scotia. The males gainfully employed in manufacturing industries varied from 35 per thousand of the occupied population in Saskatchewan to 220 per thousand in Ontario. From this widely differing occupational distribution of the population in different parts of the country arise many of the divergencies of interest which are reflected in Canadian social and political life.

The industrial distribution of female labour is considerably more uniform than is the case with male labour, though even here there are great variations. In the largest class, those employed in domestic and personal service vary from 338 per 1,000 in Ontario to 536 in Saskatchewan, while in manufactures they vary from 57 in Saskatchewan to 335 in Quebec. Comparing the sexes, we find an enormously larger percentage of the gainfully employed women than of the gainfully employed men occpied in professional pursuits. Out of the 57,835 women returned as employed in professional pursuits in 1911, no fewer than 34,063 were teachers.

Distribution of Labour Force by Nativity.—While at the census of 1911, those born outside of Canada constituted approximately only 22 p.c. of the total population, these 22 p.c., because they contained a large proportion of young, strong males, contributed no less than 31·91 p.c. of those engaged in gainful occupations. As is shown in Table 4, they constituted even a larger proportion of those engaged in domestic and personal service, in civil and municipal government, in mining and transportation, while they fell short of reaching their general proportion to the occupied population in agriculture, forestry, fishing and hunting—that is, in all the primary industries except mining.

DOMINION DEPARTMENT OF LABOUR.

The Department of Labour of the Dominion Government was established in 1900 under the authority of the Conciliation Act, 1900 (63-64 Vict., c. 24). Its chief duties originally comprised the administration of certain provisions of this statute designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wage policy for the protection of workmen employed on the Dominion Government contracts and works aided by grant of public funds, the collection and classification of statistical and other information relative to conditions of labour, and the publication of a monthly periodical known as the "Labour Gazette." From 1900 to 1909, the Department was administered by the Postmaster General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909 (8-9 Edw. VII, c. 22).

The work of the Department was greatly increased in 1907 by the passage of the Industrial Disputes Investigation Act, 1907 (6-7 Edw. VII, c. 20). The Department is also charged with the administration of an Act passed in 1918 known as the Employment Offices Co-ordination Act (8-9 Geo. V, c. 21), and of the Technical Education Act, enacted in 1919 (9-10 Geo. V, c. 73). The scope of the Department has increased in other directions, especially in the investigation of questions relating to the cost of living.

Industrial Disputes Investigation Act.—The Industrial Disputes Investigation Act, 1907 (6-7 Edw. VII, c. 20) has attracted considerable favourable attention from legislators and publicists throughout the world. It distinctly forbids strikes or lockouts in industrial disputes affecting mines and public utilities, until the matters in

dispute have been submitted for the report of a Board of Conciliation and Investigation, consisting of three members, two appointed by the Minister of Labour on the recommendation of the respective parties to the dispute, the third on the recommendation of the first two, or if they fail to agree, by the Minister himself. After their report has been made, either of the parties to the dispute may reject it and declare a strike or lockout, which, however, is likely to involve the loss of the sympathy and support of the general public. The effect has been to diminish greatly the number of strikes and lockouts in such industries. On the application of the parties to the dispute, the machinery of the Act may be extended to other industries. A review of the proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, to the end of the fiscal year 1921, shows that in the fourteen years, 509 applications were received for the establishment of boards of conciliation and investigation, as a result of which 370 boards were established. In all but 33 cases strikes (or lockouts) were averted or ended. In the fiscal year ended March 31, 1921, 63 applications for the establishment of boards of conciliation and investigation were received, and 37 boards were established. Strikes (or lockouts) were averted in all but six cases.

Fair Wages Branch.—The Fair Wages Branch of the Department of Labour is charged with the preparation of schedules of minimum wage rates, which are inserted in Dominion Government contracts, and must be adhered to by contractors in the execution of the respective works. The number of fair wages schedules prepared since the adoption of the Fair Wages Resolution in 1900 up to the end of the calendar year 1921 is 3,930, of which 26 were prepared during the year 1921.

Fair wage conditions are also inserted in contracts for the manufacture of certain classes of government supplies, and in contracts for all railway construction to which the Dominion Government has granted financial aid, either by way of subsidy or guarantee.

The Department of Labour is also frequently consulted by other departments of the Government regarding the wage rates to be observed in connection with work undertaken on the day labour plan.

Labour Legislation.—Much attention is devoted to labour legislation. Information as to new laws enacted by the Dominion and the Provinces is kept up to date, while notes or articles regarding their provisions are published in the "Labour Gazette." Since 1917, the Department has published annual reports containing the text of Canadian labour laws enacted during the year, together with an introduction summarizing this legislation under subject headings. These reports are based on a consolidation of Dominion and Provincial labour legislation as existing at the end of 1915, which was made from the most recent Revised Statutes and the subsequent annual volumes of statutes up to 1915 and which formed the Department's report on labour legislation for 1915. Reports on the labour

laws enacted in the four subsequent years have been published in regular order. The report for 1920 is similar to that for 1915, being a consolidation of Canadian labour legislation as existing at the end of 1920. The text of the Dominion and Provincial labour laws forms the larger part of the volume. In order to preserve the uniformity of the series, the legislation enacted in 1920 is summarized in a manner similar to that of the preceding reports. Another part of the introduction takes the form of an outline of the principal developments in the field of labour legislation in Canada during the quinquennium 1915-20. In this connection, consideration is given to the action taken at the International Labour Conferences held at Washington and Genoa pursuant to the Treaty of Versailles.

The advantage of uniformity in the laws relating to the welfare of persons engaged in industrial work in the several provinces was pointed out by the Royal Commission of 1919 on Industrial Relations in Canada. This view was supported by a resolution of the National Industrial Conference which was held in Ottawa in September, 1919. A commission was established in 1920, composed of representatives of the Dominion and Provincial Governments and of employers and workers respectively, to consider the foregoing subject. This commission met in Ottawa between April 26 and May 1, 1920, and formulated recommendations looking to greater uniformity in the provincial laws relative to workmen's compensation, factory control, mining and minimum wages for women and girls.

Joint Industrial Councils.—One section of the report of the Royal Commission of 1919 on Industrial Relations, related to shop committees and industrial councils. The Commissioners strongly urged the adoption in Canada of the principles underlying the Whitley Councils and other kindred systems. The subject was discussed also at the National Industrial Conference, composed of representatives of the Dominion and Provincial Governments and representative employers and labour men, held at Ottawa in September, 1919. The committee to which the matter was referred reported unanimously in the following terms:—

> "Your committee is of the opinion that there is urgent necessity for greater co-operation between employer and employee. We believe that this co-operation can be furthered by the establishment of joint industrial councils. Your committee does not believe it is wise or expedient to recommend any set plan for such councils.
>
> "We therefore recommend that a bureau should be established by the Department of Labour of the Federal Government to gather data and furnish information whenever requested by employers and employees or organizations of employers or employees that whenever it is desired to voluntarily establish such councils the fullest assistance should be given by the bureau."

While it has not been deemed necessary or desirable at the present time to establish a bureau for the purposes outlined in the resolution of the National Conference, the department has entered heartily into the spirit of the resolution and has continued and extended its study of joint industrial councils and kindred systems. Employers throughout Canada, at the request of the department, have furnished

information regarding joint councils or committees in their establishments, and the information thus received, together with information regarding similar systems in other countries, has been assembled and published as a supplement to the "Labour Gazette" of February, 1921. During the same month a conference on these matters took place at the call of the Minister of Labour, there being present representatives of a number of the larger employing companies in Canada which have established joint councils with their employees.

At a joint meeting of representatives of the international unions of the building trades and members of the Standing Labour Committee of the Association of Canadian Building and Construction Industries, and representatives from special branches of the industry, held at Hamilton, May 26, 1920, resolutions were unanimously carried, setting up a National Joint Conference Board of the Building and Construction Industries of Canada, to be composed of joint representatives elected or selected by the Association of Canadian Building and Construction Industries and five members elected or selected by the representatives of the building trades international unions. The resolution included a request that the Dominion Government appoint a representative to act as chairman and convenor of this National Joint Conference Board. The functions of the Board are of an educational and advisory nature, but it may deal with disputes referred to it for settlement by affiliated local organizations or establish local industrial boards. It is also charged with the encouragement of the organization of employers and workmen of the building and construction industries into local joint industrial boards for the settlement of disputes in the building and construction industries of Canada, and local joint industrial boards have been organized in the building trades in Hamilton, Ottawa, London, Toronto, Saskatoon and Vancouver.

The Canadian Railway Board of Adjustment No. 1 formed during the war, though not precisely a joint council, is a board of twelve members, one-half of whom are representatives of railways, named by the Canadian Railway Association, and one-half representatives of the six railway workers unions which are parties to the agreement: (1) Brotherhood of Locomotive Engineers; (2) Brotherhood of Locomotive Firemen and Enginemen; (3) Order of Railway Conductors; (4) Brotherhood of Railroad Trainmen; (5) Order of Railroad Telegraphers; (6) United Brotherhood of Maintenance-of-Way Employees and Railway Shop Labourers. The agreement provided for the reference to the board of all disputes and that the decision of the board should be final. The board served admirably during the war and the agreement has since been formally renewed. The same plan is perhaps not applicable in its entirety to other industries, but its continuance and marked success are illustrations of the increasing disposition to dispose of industrial differences by direct negotiation between the parties concerned.

CANADA AND THE INTERNATIONAL LABOUR ORGANIZATION.[1]

The International Labour Organization was set up in accordance with Part XIII of the Treaty of Versailles. The general object of the Organization is given in the preamble to that document:—

> "Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice;
>
> "And whereas conditions of labour exist involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled; and an improvement of those conditions is urgently required; as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labour supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education and other measures;
>
> "Whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries;
>
> "The High Contracting Parties, moved by sentiments of justice and humanity as well as by the desire to secure the permanent peace of the world, agree to the following."

The scheme of organization provides for an International Labour Conference to be held at least once a year and a permanent International Labour Office.

The International Labour Conference is composed of four delegates from each Member of the Organization, two representatives of the government, one of the employers and one of the workpeople. Its task is to consider proposals dealing with questions similar to those laid down in the preamble, and to embody its findings in draft conventions or recommendations. Each Member binds itself to bring such of these conventions and recommendations as are adopted by a two-thirds majority of the Conference before the competent authority or authorities. The authority has complete liberty to decide whether or not it will ratify any or all of these conventions and what action, if any, it will take on the recommendations.

It is of special interest to Canada that the Treaty recognizes the limited power of a federal government and provides that in the case of a federal state, the authority of which to enter into conventions on labour matters is limited, the federal government may treat a draft convention as a recommendation only.

Article 396 of the Treaty states that "the functions of the International Labour Office shall include the collection and distribution of information of all subjects relating to the international adjustment of conditions of industrial life and labour and particularly the examination of subjects which it is proposed to bring before the Conference with a view to the conclusion of international conventions and the conduct of such special investigations as may be ordered by the Conference."

[1]Contributed by Gerald H. Brown, Esq., Assistant Deputy Minister, Department of Labour, Ottawa.

The International Labour Office is required to collect all available information in regard to the problems to be dealt with and to prepare draft conventions or recommendations for submission to the Conference. The work of the Office has been divided for the proper performance of its duties into two divisions, namely: the Diplomatic Division, which conducts the correspondence with Governments and is called upon to deal "with the questions connected with the obligations entailed by the labour provisions of the Treaty and in particular with those relating to the work of the International Labour Conference," and the Scientific Division, which is "responsible for the collection, compilation and dissemination of information of international interest and importance about industry and labour conditions in all countries." Technical services have been created to supply the necessary information on technical questions such as maritime problems, industrial hygiene, employment and unemployment, hours of labour, agriculture, alien labour, employment of women, home work, wages, social insurance, education and co-operation.

The first session of the International Labour Conference was held at Washington in October and November, 1919, in accordance with Article 424 of the Treaty of Peace. The subjects to be considered at this first Conference were stipulated in the Treaty and included the application to industry of the principle of the eight-hour day or forty-eight hour week; the prevention or mitigation of unemployment; the employment of women before and after childbirth, during the night and in unhealthy processes; the employment of children during the night and in unhealthy processes, and the age at which they should be employed; the extension and application of the International Convention adopted at Berne in 1906 on the prohibition of night work for women and of the use of white phosphorus in the manufacture of matches. As some of the items on the agenda related to matters falling within the jurisdiction of the provinces, the Canadian Government delegates were accompanied by advisers nominated by the provinces.

The second session of the International Labour Conference was held at Genoa in June and July, 1920, and in accordance with a resolution adopted at the Washington Conference, was devoted to the consideration of matters relating to seamen. Draft conventions were adopted regarding facilities for finding employment for seamen, the minimum age of employment of children on board ship and unemployment indemnity in case of loss or foundering of ship. Recommendations were passed concerning hours of work in inland navigation, hours of work on fishing vessels, unemployment insurance for seamen and the establishment of national seamen's codes. Resolutions were also adopted for the instruction and guidance of the International Labour Office concerning the prevention and treatment of venereal disease in the mercantile marine, insurance against unemployment, special clauses in articles of agreement and seamen's codes and the education of children or apprenticed seamen. The prohibition of the employment of trimmers and stokers under eighteen

years of age, the medical examination of children before employment on board ship and the education of children were referred to the next Conference for consideration. These last mentioned subjects were dealt with at the Conference of 1921.

A Joint Maritime Commission composed of twelve persons was appointed to advise the International Labour Office on questions relating to seamen.

The third annual meeting of the International Labour Conference was held at Geneva in October and November, 1921. An invitation was extended by the Dominion Government to the Provincial Governments to be represented at this Conference. Three of the provinces, namely Ontario, Manitoba and Quebec, accepted the invitation and their representatives were appointed as advisers to the Government delegates.

The discussions of the Conference resulted in the adoption of Draft Conventions regarding the minimum age of trimmers and stokers on ships, medical inspection of children and young persons on ships, the use of white lead in painting, the right of association of agricultural workers, workmen's compensation for agricultural workers, the employment of children in agriculture, and a weekly rest in industrial undertakings. Recommendations were made concerning agricultural workers in relation to technical education, unemployment, social insurance, night work of women and children, maternity and housing conditions and concerning a weekly rest in commercial establishments.

On receipt from the Secretary-General of the League of Nations of the texts of the draft conventions and recommendations of these three International Labour Conferences, they were referred to the Department of Justice for examination as to the legislative authority of the Dominion and the provinces to deal with the subject matters in question. Certain of the draft conventions and recommendations were found to be within provincial authority and were accordingly referred to the Provincial Governments, whilst those within federal jurisdiction are engaging the attention of the Dominion Government. The opinion of the Department of Justice on the Geneva draft conventions and recommendations has not yet (May 27, 1922) been rendered.

To date (May 27, 1922) the decisions of the First International Labour Conference, held in Washington, D.C., in 1919, have led to the enactment of more than 50 statutes bearing on labour matters in various countries, and to the preparation of over 100 separate bills. The Second International Labour Conference of 1920, which was devoted entirely to the consideration of matters affecting seamen, has been followed by the adoption of three laws and the preparation of about 30 separate bills. The Third International Labour Conference, held in October and November, 1921, has already led to the preparation of two bills.

ORGANIZED LABOUR IN CANADA.

The labour movement in Canada is of comparatively recent growth. In all the countries where a widespread national labour movement has arisen, it has done so only when, through the increase of large scale production involving increased investment of capital, the impossibility of the average labourer ever rising into the position of an employer has been demonstrated. When this happens the instinct of class consciousness is excited, and labourers, realizing that great individual success in the future is for them improbable, band themselves together to secure higher wages and greater comfort in the present.

For these reasons, the modern labour movement took its rise in England—the first country to be affected by the so-called Industrial Revolution—the change from hand to machine production. Where this change takes place, business skill—skill displayed in bargaining for raw material, for needed capital, for labour, for the sale of finished products—becomes the predominant factor in business success, rather than technical skill, and the skilled labourers who possess technical but not business skill, find themselves labouring throughout their lives for the entrepreneur. By the organization of trade unions for collective bargaining they attempt with more or less success to change the situation to their advantage.

Trade Unionism in Canada occupies a unique position by reason of the fact that most organized workers in the Dominion are members of organizations whose headquarters are located in a foreign country, viz.: the United States. This condition is explained when it is understood that workers move freely from one country to the other in order to find employment. In years gone by Canadian workmen who sought a livelihood in the United States greatly outnumbered those from the latter country who came to Canada. As industry was further developed in the United States, there arose a number of unions of various crafts, and with these the Canadian workers soon became affiliated. With the development of industry in the Dominion many of these Canadians subsequently returned to their native land, bringing with them the gospel of trade unionism and collective bargaining as a means of protecting their rights. In many instances these trade unionists became the nuclei of strong bodies of organized labourers formed in Canadian cities.

In the early part of the nineteenth century, a number of independent trade associations were formed in Canada, the earliest of which there is record being a printers' organization in Quebec city in 1827. The first union known to have been organized in the province of Ontario was also composed of printers, and operated in York (now Toronto), as early as 1834; both of these bodies were later superseded by branches of the International Typographical Union, which body in 1869 changed its name from National Typographical Union of the United States, on account of the inclusion of Canadian branches.

In 1851 a branch of the Amalgamated Society of Engineers, a British organization composed of metal mechanics, was established in Toronto. In the years immediately following other branches were

organized in other Canadian cities, the society having the whole Dominion for its operations. In 1888 the United Machinists and Mechanical Engineers of America was formed and entered the field as a competitor for the organization of the craftsmen eligible for membership in the Amalgamated Society. The first Canadian lodge (No. 103) of the new body was formed in Stratford, Ont., in 1890, while lodges in Montreal (No. 111) and in Winnipeg (No. 122) were organized before the close of the same year. To meet the extension of the jurisdiction into Canada the name of the organization was changed in 1891 to International Association of Machinists. Since that time the organization has added greatly to its Canadian following, having at the close of the year 1921 99 local lodges with a combined membership of 10,135. On the other hand, the Amalgamated Society never added very greatly to its Canadian following, the largest number of local branches and members on record being in 1919, when they stood at 24 and 3,000 respectively. Negotiations were opened in 1919 by the general officers of the Amalgamated Society of Engineers and the International Association of Machinists, with a view to effecting an amalgamation. As a result the Amalgamated Society on Sept. 30, 1920, withdrew its operations from Canada and also from the United States, where branches were also in existence, leaving the whole North American continent to the International Association of Machinists. Another British labour organization to establish branches in Canada was the Amalgamated Society of Carpenters and Joiners, now the Amalgamated Society of Woodworkers, which in 1860 chartered a branch in Toronto, twenty-one years before the United Brotherhood of Carpenters and Joiners, now the chief organization in North America of the craft named, came into existence. In this case also bickerings finally led to a unification whereby the members of the Amalgamated Society became also members of the United, retaining their connection with the parent body for the beneficial features. The only other branch of a British labour organization in Canada is a lodge in Hazelhill, N.S., of the Association of Wireless and Cable Telegraphers. With the practical elimination of the British organizations, the North American field has been left entirely to the labour organizations originating on this continent. These labour bodies are for the most part in affiliation with the American Federation of Labour, which in addition to dealing with trade matters speaks for the organized workers in the United States on the subject of legislation. In Canada the legislative mouthpiece of organized labour is the Trades and Labour Congress, which body is strongly representative of the international labour movement, its affiliated membership being largely drawn from international organizations which have in the first place been affiliated to the American Federation of Labour. Under the travelling card system now in vogue members of the respective unions move as they desire between the two countries and are entitled to all rights and privileges established in the various localities where local branches are in existence. Canadian members of international organizations are eligible for the highest offices in the gift of their organizations, and in some instances have been elected to these posts.

In addition to the international trade union membership in Canada there are labour bodies which are termed non-international. Some of these organizations were formed by former members of international unions which for various reasons severed their connection with the parent bodies. There are also a number of independent labour unions in the Dominion, their origin in a few instances being an outcome of grievances against their central organizations not being settled to the satisfaction of the complaining branches.

A statement of the development of organized labour in Canada would not be complete without a reference to the Knights of Labour, an organization formed in the United States in 1869, to which all classes of workers were admitted. The Knights of Labour, which in 1885 reached its greatest numerical strength, with about a million members, extended its jurisdiction into Canada, establishing district and local assemblies in many localities in the Dominion, seventeen of which were operating in 1891 in the province of Quebec. Soon after the latter date, internal dissension took place in the ranks of the organization, owing to the difficulty of uniting workers of different crafts in one body. The international craft organizations, which had in the meantime become united under the banner of the American Federation of Labour, formed in 1881, offered strong opposition to the Knights of Labour, which in a few years ceased to be a factor in the labour movement of the continent. All of its Canadian "Assemblies" have long since passed out of existence.

Trades and Labour Congress of Canada.—Through the initiative of the Toronto Trades Assembly (now the Toronto District Trades and Labour Council) the first national labour organization, the Canadian Labour Union, was formed in Toronto in September, 1873. The organization held its second and third annual meetings in 1874 and 1875, but disappeared as a result of the serious depression of the later 70's. In 1883 the Trades and Labour Council of Toronto, feeling the necessity of the wage earners of Canada having a medium through which to express their opinions, assumed the responsibility of calling another trades and labour congress, which met in Toronto on Dec. 26, with 45 delegates. On the summons of the Toronto council a second meeting, with 109 delegates, assembled on Sept. 14, 1886, the first occasion on which any labour body outside of the province of Ontario was represented. A permanent organization was effected at this meeting under the name of "Trades and Labour Congress of the Dominion of Canada." This was the title of the organization until 1895, when the title "Trades and Labour Congress of Canada" was adopted in preference to "Canadian Federation of Labour." Since 1886 conventions have been held annually, the 1921 meeting in Winnipeg being counted as the thirty-seventh. The Trades and Labour Congress is representative of international trade unionism in the Dominion, the bulk of its membership being drawn from the international organizations which have local branches in Canada. According to reports for 1921 the congress received payment of per capita tax from 58 international bodies which had

affiliated the whole of their Canadian membership, numbering 150,812, in 1,699 local branches. In addition three national organizations affiliated their whole membership of 9,771, in 210 branches. With other affiliations and unions directly under charter the congress had in all at the close of 1921 a membership of 173,778, in 1,964 branches.

Membership of International Organizations in Canada.—At the close of 1921 there were 98 international organizations having one or more local branch unions in Canada, three fewer than in 1920. These bodies between them have 2,223 local branches in the Dominion with 222,896 members, a decline of 232 branches and 44,351 members as compared with the previous year. The international organizations have 83 per cent of the local branches of all classes in the Dominion, and 71 per cent of the members.

Canadian Federation of Labour.—The Canadian Federation of Labour was organized in 1902 under the name of National Trades and Labour Congress as the result of the expulsion from the Trades and Labour Congress of Canada of the Knights of Labour assemblies and all other unions which were composed of members of crafts over which existing international organizations claimed jurisdiction. The delegates of the expelled unions forthwith formed a new central body of a distinctively national character, which in 1908 adopted its present name. For a number of years labour bodies in the province of Quebec were the main support of the new organization. Gradually the Quebec affiliations dropped off and the centre of activity was a few years ago shifted to Toronto. The membership of the Federation at the close of 1921 stood at 7,430, comprised in 32 directly chartered local branches. Two central bodies are also affiliated with the Federation.

Non-International Trade Union Membership.—There are in Canada fifteen organizations of wage earners termed non-international unions, eight of which are in direct opposition to the international organizations. In some instances these non-international bodies have been formed by secessionists from international unions. The combined membership of the non-international organizations is 24,980, comprised in 264 local branches.

Membership of Independent Units.—There are 27 independent local labour bodies in the Dominion, 21 of which have a membership of 15,644. The remaining six have not reported as to their standing.

Federation of Catholic Workers of Canada.—During the period that the Knights of Labour operated in Quebec there existed also four independent unions, one of labourers and three of leather and shoe workers. Up to 1902 these several bodies were represented at the annual conventions of the Trades and Labour Congress of Canada. In that year, in an effort to eliminate a duplication of unions, and to bring the independent bodies under the banner of the

international organizations, the Trades Congress denied them further representation. The Knights of Labour assemblies gradually disappeared, but the independent unions continued to exist. With the advent of the Mutual Labour Federation of the North in 1912, the first organization to confine membership to adherents of the Roman Catholic church, a stimulus was given to this movement, and several of the existing independent unions, the number of which had increased during the decade from 1902 to 1912, became identified with what are termed National and Catholic unions. In 1918 a conference of these bodies was held in Quebec city, followed by other meetings in Three Rivers in 1919 and in Chicoutimi in 1920, the delegates at the latter conference, numbering 225, from 120 unions, deciding to establish a permanent central body to co-ordinate the work of the scattered units. Accordingly at the 1921 conference held in Hull, at which approximately 200 delegates were present representing 89 unions, a constitution to govern the new body was approved. The name selected was Federation of Catholic Workers of Canada, and permanent officers were elected, the constitution and bylaws to become effective on January 1, 1922. From information at hand, there are 120 National and Catholic unions with a combined membership of 45,000.

One Big Union.—Owing to dissatisfaction with the alleged reactionary policy of the Trades and Labour Congress of Canada, a number of delegates from Western Canada to the Quebec convention in 1918 held a caucus for the purpose of having the delegates from the western unions concentrate their energies towards having the Trades Congress legislate in accordance with the views of these bodies. Some months later a meeting of delegates was called by the British Columbia Federation of Labour, to assemble immediately following the annual convention of that body, which for the first time in its history met outside of the province under its jurisdiction, in the city of Calgary. The conference assembled on March 13, 1919, with 239 delegates present; the outcome of the meeting was the formation of an industrial organization, the "One Big Union." On June 11, 1919, a conference of the advocates of the new body was held in Calgary to further the plans of organization. The next meeting, termed the first semi-annual convention, was held in Winnipeg in January, 1920. The O.B.U. had made much progress during its short existence, with a membership of 41,150 at the close of 1919. From the outset the O.B.U. met with much opposition from the old-established labour unions, as represented by the Trades and Labour Congress of Canada, which are opposed to the substitution of industrial unionism for the existing system of craft unions. During the years 1920 and 1921 the O. B. U. has been on the decline, many of the early supporters having deserted the organization, and the membership has dropped to approximately 5,300.

Total Reported Membership of Organized Labour in Canada.—At the close of 1921 the numerical strength of organized labour in Canada is given by the Department of Labour as follows: International organizations, 2,223 local branches with an aggregate

membership of 222,896; non-international organizations, 264 branches and 24,480 members; independent units, 27 with 15,644 members; National and Catholic unions, 120 with 45,000 members; and One Big Union, 34 units, with 5,300 members. Grand total, 2,668 local branches and 313,320 members, decreases as compared with 1920 of 250 branches and 60,522 members.

Table 6 shows by years the membership of trade unions in Canada since 1911.

6.—Membership of Trade Unions in Canada, 1911-1921.

Year.	Members.	Year.	Members.
1911	133,132	1917	204,630
1912	160,120	1918	248,887
1913	175,799	1919	378,047
1914	166,163	1920	373,842
1915	143,343	1921	313,320
1916	160,407		

International Trade Unions Operating in Canada.—Table 7 gives the names of the 98 international labour organizations which have extended their operations into Canada, and contains (1) the number of branches which were in existence in the Dominion at the close of 1921 and (2) the reported membership.

TRADE DISPUTES.

Statistics of strikes and lockouts in Canada have been collected and published by the Department of Labour since its inception toward the end of 1901. Table 9 shows the number of disputes, the number of employers and employees involved and the time loss in working days for each year from 1901 to 1921, and the totals for the period. The item in the time loss in working days is calculated by multiplying the number of men directly affected through a strike or lockout by the number of working days they are so affected during the time the firm or establishment is involved. For the year 1921 the number of disputes, the numbers of employers and employees involved were smaller than in the previous year, but the time loss in working days during the year slightly exceeded that for 1920 owing to a number of prolonged disputes, namely, the printers' strike for a 44-hour week beginning about June 1st and to a considerable extent unsettled at the end of the year, the strike in the pulp and paper industry early in the year, and several strikes in the building trades lasting several weeks. In all respects, however, the figures were lower than in 1919, when not only the general strike at Winnipeg and the resulting sympathetic strikes, but also disputes in many industries throughout the Dominion, contributed to cause the greatest time loss on record in Canada, involving also the largest number of employees and of establishments.

The time loss owing to trade disputes since the beginning of the century to the end of 1921 is shown by industries in Table **10**, from which it is evident that the time loss during the period has been greatest in the mining industry, followed by the metals, machinery and conveyances industry, which owed its prominence to the great

strike in Winnipeg in 1919. In 1921, however, the industries most disturbed by industrial disputes were the printing and allied trades (higher wages and the 44-hour week), and the building and construction trade (generally against reduction of wages).

Table **11** shows by industries the number of disputes, the number of employees involved and the time loss, the greatest time loss being, as above mentioned, in printing and publishing, in pulp and paper manufacturing and in building and construction, with however considerable time loss in the clothing industry, in food, liquor, and tobacco manufacturing, and in mining. Apart from the printers' strike for the 44-hour week the feature of the year was the number of men who struck against reductions in wages, 16,255 out of 22,930, of whom 11,052 were unsuccessful, while 2,836 secured a compromise. The number of disputes in existence in 1921, with the number of employees involved and the time loss, is shown by months in Table **13,** which indicates that in 1921, as ordinarily, the maximum of trade disputes was reached in the early summer—in May and June.

The causes and results of industrial disputes occurring in 1921 are given in Table **12,** from which it is evident that the chief struggles of the year resulted from the attempt of the employers to reduce money wages, corresponding with the falling prices of their products, and the resistance of the employees to such reductions—a resistance which was rarely successful since it ignored the current economic trend. Statistics of the methods applied in settling the disputes which occurred during the year are presented in Table **14.**

9.—Record of Labour Disputes by Years, 1901-1921.

Year.	Number of Disputes.		Disputes in existence in the year.		
	In existence in the year.	Beginning in the year.	Employers involved.	Employees involved.	Time loss in working days.
1901	104	104	273	28,086	632,302

EMPLOYMENT AND UNEMPLOYMENT.

Employment Service of Canada.—The Employment Offices Co-ordination Act, (8-9 Geo. V, c. 2), empowering the Minister of Labour to aid and encourage the organization and co-ordination of public employment offices throughout Canada in order to establish a Dominion-wide Employment Service, was passed in May 1918. At that time there were only twelve provincial employment offices in the Dominion but at the close of the year fifteen offices were in operation and by the end of 1919 the number had increased to ninety-two. As the demobilization period came to a close the number of offices decreased and at the end of the year 1921 there were 76 offices, distributed among the provinces as follows:—Nova Scotia, 4; New Brunswick, 2; Quebec, 5; Ontario, 26; Manitoba, 9; Saskatchewan, 9; Alberta, 7; British Columbia, 14.

Under the Employment Offices Co-ordination Act sums aggregating $50,000 in 1918-19, $100,000 in 1919-1920 and $150,000 in subsequent years, (amounts afterwards increased), were appropriated to be paid to the Provincial Governments in proportion to their expenditure on employment offices, to assist them in organizing and extending their services. Subventions were made conditional upon an agreement between the Minister of Labour and the Provincial

Governments as to the terms, conditions and purposes upon and for which payments should be made. During 1921 agreements were completed with all the provinces except New Brunswick and Prince Edward Island. Agreements were also made during the year with the municipalities of Moncton and Chatham, in accordance with an amendment to the Act passed in 1920. The agreement requires that in the operation of the employment offices the provinces shall endeavour to fill situations in all trades and occupations for both men and women and that no charge shall be made to employers or employees for this service. Each province agrees to maintain a provincial clearance system in co-operation with the interprovincial clearance system established by the Dominion Government; to organize in connection with the Employment Service of the province a provincial advisory council, and in every city of the province with a population of 25,000 or more in which an employment office is established, a local advisory council, representing equally employers and employees, to assist in the administration of the employment offices.

Regulations issued under authority of the Act in December, 1918, in addition to authorizing Provincial and Local Advisory Councils, provided for the establishment of the Employment Service Council of Canada, to advise the Minister of Labour in the administration of the Act and to recommend ways of preventing unemployment. This body is composed of representatives of the Dominion and Provincial Governments, the Canadian Manufacturers' Association, the Association of Canadian Building and Construction Industries, the Trades and Labour Congress of Canada, the Railway Association of Canada, the Canadian Railway Brotherhoods, the Canadian Lumbermen's Association, the Canadian Council of Agriculture and the Great War Veterans' Association. It has held three meetings, the first in May, 1919, the second in September, 1920, and the third August 31-September 2, 1921, at which plans for developing the work of the Employment Service and for preventing unemployment were discussed and recommendations presenting the views of the Council were adopted.

During the year 1921, the applications for employment received at the various local offices of the Employment Service totalled 530,872, of which 434,590 were for men and 96,282 for women. The vacancies reported during the same period numbered 420,024, of which 321,402 were for men and 98,622 for women. During the year 280,518 placements were made in regular employment, of which 245,246 were of men and 35,272 of women, and also 7,523 placements in casual employment.

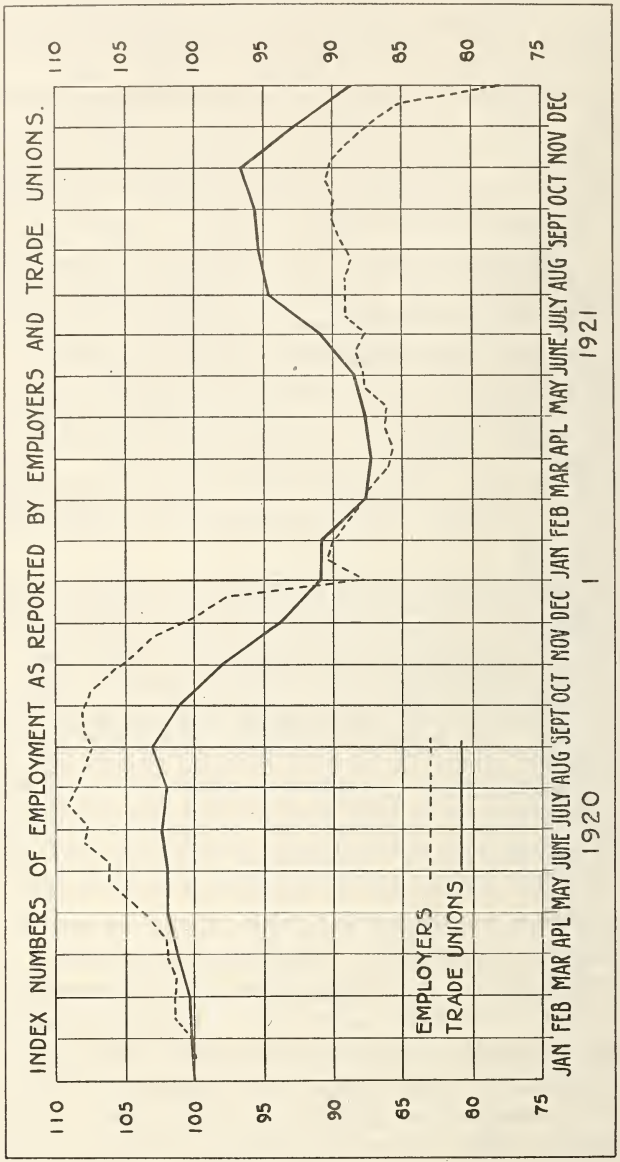
A special transportation rate for persons sent by the Service to employment at a distance has been granted by the principal railways. This rate, applying only in cases of *bona fide* placements through the Employment Service, was granted during the year 1921 to 37,445 persons, of whom 23,536 were going to points in the same province as the dispatching provinces and 13,909 to points in other provinces.

During the fiscal year 1919-20 an arrangement was put into effect with regard to the admission of workers from Great Britain to fill vacancies which cannot be filled in Canada. This plan, which involves close co-operation between the Immigration Department and the Employment Service and between the Employment Service of Canada and the British Employment Exchanges, proved on the whole very satisfactory and continued in force during 1921. A procedure has been adopted which as far as possible obviates delay and at the same time insures that workers shall not be brought into the country before every effort has been made to secure the required help in Canada and the authorities have had an opportunity of deciding whether prevailing conditions warrant the importation of the required labour.

Data covering the field of employment are collected and compiled under authority of the Employment Offices Co-ordination Act. For this purpose five principal sources of information were used during 1921: reports from employers, trade union reports, employment office reports, reports on civic employment and reports on building permits. The returns received and tabulated during the year showed that while in 1920 employment remained at a high level until autumn, the volume of employment in 1921 was at a low ebb throughout the whole year, the highest level attained being considerably lower than the peak in 1920, and only slightly above the lowest level of the latter year.

The reports from employers and trade unions are on the whole the best indices of employment. The former are received weekly from some 5,200 employers employing about 600,000 persons, and the latter monthly from some 1,500 unions with a combined membership of over 160,000. As shown in the accompanying chart, returns from these two sources agree in indicating a continuation until the 1st of April 1921, of the marked contraction in employment which commenced in October 1920. From the spring of 1921 until late in October, employment expanded fairly steadily, but in the following month the autumn and winter contraction in industry set in, causing the curve of employment to decline rapidly, so that at the end of the year it stood at a very low level.

INDEX NUMBERS OF EMPLOYMENT, 1920 AND 1921.



For the curve of employment as reported by employers, the number of employees reported as at work on Jan. 17, 1920, is taken as 100.

For the curve of employment as reported by trade unions, the percentage of trade unionists reported as at work on Jan. 1, 1920, viz., 96·02 p.c., is taken as 100

The curve is based on the number of employees actually at work on the last day of each month as reported by the firms making returns in comparison with the number of employees reported by the same firms on January 17, 1920.

WAGES.

Statistics of wages and hours of labour have been compiled for recent years by the Department of Labour, the records in some cases going back to 1900. To indicate the general movement of wage rates, index numbers have been calculated from the hourly and weekly rates. For 21 classes of labour in 13 cities, index numbers were calculated from published statistics back to 1901 and for common labour in factories, for a number of miscellaneous factory trades and also in lumbering back to 1911, hourly rates only being included in the calculation up to 1921. Index numbers of wages in coal mines have also been published for the three principal districts from 1900 to 1921, those for the years 1911 to 1921 being included here.

The accompanying table summarizes these index numbers and shows the downward movement during 1921 in the groups covered, the greatest decreases appearing in lumbering and sawmilling, amounting in some cases to 33 per cent.

Early in the year reductions in wages were made in many of the factories throughout Canada, some of which had closed down toward the end of 1920 or early in 1921 and reopened with wages on a lower scale. In some cases reductions were as great as 15 and 20 p.c., but in other cases were only 5 or 10 p.c., while successive reductions of 5 or 10 p.c. occurred in other instances. In the spring there was a fairly general reduction in wages in the building trades, amounting in many cases to 10 cents per hour. In the metal trades, reductions varied considerably, but averaged about 10 cents per hour. In the printing trades, the agreements of the unions with the job printing proprietors expired in many cases and in the new agreements reductions in the working hours from 48 to 44 per week were provided for in some cases, the weekly rates of wages being also reduced in some cases while in others increases occurred. Substantial increases in hourly rates therefore appeared. Owing, however, to strikes in these trades for the 44-hour week in many cities, conditions were unsettled during the last seven months of the year. In railway work, there were decreases averaging 12 p.c. for all classes, but ranging from 5 p.c. to 17 or 18 p.c. Coal miners in the various districts in Canada had received increases in wages in the closing months of 1920 and these rates continued through 1921 except in Vancouver island mines, where reductions according to calculations of changes in the cost of living in that mining district amounted to nearly $1 per day. In some of the smaller coal mines in Alberta wages were reduced about 15 p.c. and in New Brunswick 12½ p.c. In metal mining, decreases were between 15 and 25 p.c. In smelters wages were similarly reduced. In the pulp and paper industry there was a general decrease in the summer of 1921, ranging in the different trades from 10 to 20 p.c. according to the trades involved, following a strike and the award of an arbitration board, the finding of which was applicable to many mills in Canada as well as in the United States.

(1) Index numbers for 1921 calculated by reducing those for 1920 by the extent of the average decrease per cent in each group from 1920 to 1921, shown by the samples available for both 1920 and 1921 as follows:—Common labour in factories, 65 samples, miscellaneous factory trades, 257 samples, lumbering, 46 samples.
[2]Calculated from three classes of miners on day wages and average earnings per day for contract miners in representative mines in the three important coal mining districts, Nova Scotia, southern Alberta and eastern British Columbia and the Vancouver island field.

20.—Rates of Wages and Hours of Labour of Employees of Steam Railways in Canada, September, 1920, and September, 1921.[1]

Wages in Canadian Manufacturing Industries in 1915 and 1919.—At the census of manufactures taken for 1915, an attempt was made for the first time to secure detailed statistics of the wages paid in manufacturing establishments throughout Canada. Statistics of wages were actually obtained from 14,887 manufacturing concerns, having 394,597 wage-earners out of a total enumerated in the census of 462,200. In 1919, statistics of wages were obtained on a somewhat similar schedule for 525,505 wage-earners out of an ascertained total of 594,118 wage-earners employed in Canadian manufacturing industries. The statistics for these two years are given for comparative purposes in Table 24

The increase in wages during the four year period between 1915 and 1919 may best be measured by taking the median wage, that is, the wage of the individual in each group who, as nearly as can be ascertained, has just as many persons receiving more than him as receive less than him. On the assumption that the earnings of the members of the wage-group containing these individuals were evenly distributed between the upper and lower limits, the median wages in 1919 were as follows, the 1915 median wages being given for comparative purposes in parentheses: males over 16, $22.78 ($12.64); females over 16, $11.59 ($6.87); males under 16, $8.37, females under 16, $7.71, all wage-earners under 16, $8.06 ($4.48). For males over 16 the median wage, therefore, increased by 80·2 p.c., for females over 16 by 68·7 p.c., for wage-earners under 16 by 79·9 p.c. in the four year period. Table 28, compiled by the Department of Labour, shows an increase in the cost of living from 104 p.c. of the 1913 cost in December 1915 to 175 p.c. in December 1919, or an advance of 68·2 p.c. on the 1915 prices.

PRICES AND THE COST OF LIVING.

Wholesale Prices.—Statistics as to wholesale prices in Canada have been published by the Department of Labour since 1910, an index number being calculated to show the movement from month to month and from year to year. A special report, issued in 1910, contained records of prices of 230 commodities from 1890-1909, and afforded the basis for the index number, the statistics being brought down to date each year in annual reports for calendar years. Since 1917 annual reports have not been issued, but the index figures have appeared monthly in the Labour Gazette.

The index number has been calculated from the prices each month of 271 commodities since 1915, 272 commodities from 1910 to 1914, and 230 commodities from 1890 to 1909. The index figure shows the price level each month or year as a percentage of prices during the period adopted as a base, which was the decade 1890 to 1899. Each month or year the current price of each article is divided by the average price of the same article for the decade 1890-1899 and multiplied by 100, thus obtaining its current relative price, or its percentage of the price for the base period. These relative prices or percentages are averaged to ascertain the general index number for all commodities included and also by groups to determine the group averages, and sub-group averages. The index number is not weighted, otherwise than by the selection of large numbers of items from important commodity groups, that is, no allowance is made for the relative importance of the various articles included, the simple arithmetic average being taken in each case.

The accompanying tables and diagrams show the steep decline in prices during 1921, continuing the downward movement which began in May 1920, and was experienced not only in Canada but throughout the world, except where the excessive issue of paper currency tended to raise prices still more. The table of group averages by months shows that prices of farm products and raw materials declined most until the end of 1920, and that prices of semi-manufactured goods declined generally after the downward movement in raw materials had in a general way ceased about the end of 1920. At the end of 1921 prices were approximately 70 per cent above 1913 levels, whereas at the beginning of the year, the general level was 108 per cent higher and in May 1920 as much as 165 per cent above 1913 levels.

COURSE OF WHOLESALE PRICES IN CANADA, BY MONTHS, 1919-1921.

Retail Prices.—Statistics as to retail prices in Canada have been published by the Department since 1910, the retail prices of the principal staple foods, of coal, wood and coal oil and also the prevailing rates for the rent of six-roomed houses being published in the Labour Gazette each month for the cities having a population of 10,000 or more, some sixty in number. Figures for December, 1900, and December, 1905, were also secured in a special investigation in 1914. From the averages of these figures for the Dominion and for each province a calculation of a theoretical weekly family budget of expenditure on food, fuel and light and rentals has been made for each year since 1910 and for each month since January 1914, in order to show the general movement in retail prices as the movement in wholesale prices is shown by the index number. Tables **29** and **30** show the details of the changes in the average prices of each article included in food, and fuel for the Dominion and in the cost of the three items, food, fuel and rent in each province for each month of 1921 and for earlier dates.

In addition to the statistics as to retail prices of food and fuel, and as to rates for rent, the Department during 1920 and 1921 secured figures as to retail prices of staple lines of clothing, including footwear, from retail dealers throughout Canada, for each year back to 1913. The figures relate to prices prevailing at the end of the year in each case, but since 1919 prices have been secured more frequently. From these quotations the percentages of changes in the cost of clothing have been calculated. Information was also secured as to the prices of household supplies, furniture, furnishings, etc., and an estimate

has been made as to the percentage changes in the cost of miscellaneous items, the effect of the information gathered showing that such changes are approximately equal to the average changes in other items. The percentage changes in food, fuel and rent have been calculated from the weekly budgets published in the Labour Gazette from month to month, and Table 28 summarizes the yearly and quarterly changes by groups, the figures for each group and for all items being weighted according to the family budget method. From July, 1920, to June, 1921, food and clothing prices fell steeply, and fuel slightly, while rent advanced. Food recovered in August and September, 1921, but by December was back to June levels. Clothing changed little on the average after June.

28.—Index Numbers of Changes in the Cost of Living in Canada, based upon weighted Retail Prices, 1910-1922.

Average Prices, 1913 = 100.

XII.—FINANCE.

Under the general heading of Finance in Section XII are grouped statistics relating to the public accounts of the Dominion Government, including revenue and expenditure, public debt, assets and liabilities and inland revenue. Tables have been added showing the receipts and expenditure of each of the nine provincial governments of Canada, and these are followed by financial statistics of urban municipalities, of the Ontario Hydro Electric Power Commission, values of building permits and statistics of currency and banking, loan and trust companies, commercial failures, government annuities and insurance companies.

DOMINION PUBLIC FINANCE.

Historical Sketch.—Both under the French *régime* and in the earlier part of the British, the territorial or casual revenues of Canada, consisting of certain seignorial dues and the proceeds of the sale of government timber and land, were reserved to the Crown, while the right of levying taxes and of regulating the trade and commerce of the colony was deemed to be vested in the British Parliament.

By the Quebec Act of 1774, certain duties on spirits and molasses were imposed, to be expended by the Crown in order to provide a revenue "toward defraying the expenses of the administration of justice and the support of the civil government of the province." A little later, in 1778, the British Government by the Declaratory Act (18 Geo. V, c. 12), renounced forever the right of taxing the colonies to provide Imperial revenue, but maintained its claim to impose duties considered necessary for the regulation of trade, the proceeds to go towards defraying the expenditures of the colonial administration. After the Constitutional Act of 1791, the customs duties remained under the control of the Imperial Government, their revenue, as well as the territorial revenue above mentioned, coming in to the executive administration independently of the Legislative Assembly and thus making the executive power largely independent of the legislature. In case these revenues proved insufficient, recourse could generally be had to the grant made by the Imperial Government for the support of the army. As time went on, however, the Crown revenues became more and more inadequate to meet the increasing expenditure, while the wave of economy after 1815 in Great Britain made it impossible any longer to supplement these revenues from military sources. On the other hand, the purely provincial revenues collected under the authorization of the provincial legislature showed an increasing surplus. The power of the purse thus began to pass into the hands of the legislatures; in 1831 the British Parliament passed an Act placing the customs duties at the disposal of the legislatures.

Under the Act of Union a consolidated revenue fund was established. All appropriation bills were required to originate in the Legislative Assembly, which was forbidden to pass any vote, resolution or bill involving the expenditure of public money unless the same

had been first recommended by a written message of the Governor-General. The British Government surrendered all control of the hereditary or casual revenues, which were thenceforth paid into the treasury of the province to be disposed of as its legislature should direct.

At the interprovincial conferences which took place prior to Confederation it was decided that the new Dominion Government, which was to take over permanently as its chief source of revenue the customs and excise duties that had yielded the greater part of the revenues of the separate provinces, (direct taxation being as unpopular in British North America as in other new countries), was also to assume the provincial debts and to provide out of Dominion revenues definite cash subsidies for the support of the Provincial Governments. (See Tables **16** and **17**.) Until the Great War, which made other taxes necessary, the customs and excise revenue constituted the chief resource of the Dominion Government for general purposes—the post office revenue and railway receipts which, properly speaking, are not taxes at all, being mainly or entirely absorbed by the expense of administering these services. Indeed, for many years preceding the war, customs and excise duties, together with the revenue secured by the head tax on Chinese immigrants, were the only items of receipts which were classified by the Department of Finance as taxes. In the last fiscal year of peace, these two items aggregated $126,143,275 out of total receipts on consolidated fund account amounting to $163,174,395, the post office and government railways furnishing between them $26,348,847 of the remainder, offset, however, by expenditure on these two services amounting to $27,757,196. Miscellaneous revenue, largely fees, amounted in that year to $10,682,273—a comparatively small fraction of the total. As both customs and excise taxes were indirect, the average Canadian felt but little the pressure of taxation for Dominion purposes.

The war enormously increased the expenditure and this increase had in the main to be met by loans, It is, however, a cardinal maxim of public finance that where loans are contracted, sufficient new taxation should be imposed to meet the interest charge upon the loans and to provide a sinking fund for their ultimate extinction. This war taxation was begun in Canada within the first weeks of the war, when in the short war session of August, 1914, increases were made in the customs and excise duties on various commodities, including coffee, sugar, spirituous liquors and tobacco. In 1915 special additional duties of 5 p.c. ad valorem were imposed on commodities imported under the British Preferential Tariff and 7½ p.c. ad valorem on commodities imported under the Intermediate and General Tariff, certain commodities being exempted. New internal taxes were also imposed on bank circulation, on the income of trust and loan companies, on insurance other than life and marine companies, on telegrams and cablegrams, railway tickets, sleeping car berths, etc., also on cheques, postal notes, money orders, letters and post cards. In the following year the Business War Profits Tax (dropped

in 1921) was introduced, and in 1917 an Income Tax was imposed. In 1918 both of these taxes were increased and their application widened, and in 1919 the income tax was again increased, and still further augmented in 1920, by a surtax of 5 p.c. of the tax on incomes of $5,000 and over; the sales tax was also introduced in that year. This sales tax was increased in 1921 and again in 1922. The cumulative result of these war taxes was that in the fiscal year ended Mar. 31, 1921, customs duties were for the first time displaced from their position as the chief factor in Canadian revenue, the war taxes yielding $168,385,327 as against the customs yield of $163,266,804. In the fiscal year recently closed, this fact is still more obvious, for war taxes yielded $177,484,161, while the yield of customs duties fell to $105,686,645. The income tax has contributed increasingly to the yield of war taxes, raising $78,684,355 in the fiscal year ended Mar. 31, 1922, or approximately three-quarters of the yield from customs.

A more detailed sketch of the new taxation imposed during and following the war is appended for reference:—

War Taxation in Canada.—War taxation began in Canada almost simultaneously with the outbreak of the war. In the short war session of August, 1914, the Customs Tariff Amendment Act, (chap. 5) and an Act to amend the Inland Revenue Act, (chap. 6), provided for increases in the customs and excise duties on various commodities, including coffee, sugar, spirituous liquors and tobacco. In the 1915 session the Customs Tariff War Revenue Act, 1915, imposed duties or additional duties of 5 p.c. ad valorem under the British Preferential Tariff, and of 7½ p.c. ad valorem under the Intermediate and General Tariffs on all goods in Schedule A of the Customs Tariff, whether dutiable or free of duty, subject to exemptions of which the chief were, fish caught by Canadian and Newfoundland fishermen, goods used in the manufacture of agricultural machinery and of binder twine, certain goods used for medical and surgical purposes, anthracite coal, steel for the manufacture of rifles, silk, chemical fertilizers, cotton seed cake and cotton seed cake meal. By the Special War Revenue Act (chap. 8), new taxes were imposed as follows: on every bank, ¼ of 1 p.c. on the average amount of its notes in circulation during each three months period; on every trust and loan company, 1 p.c. on its Canadian income; on every insurance company other than life and marine insurance companies, 1 p.c. of its net premiums received in Canada. Further, taxes were imposed of 1 cent on every cablegram or telegram for which a charge of 15 cents or more was made; 5 cents on the first $5 and 5 cents on every additional $5 on railway and steamboat tickets to places in North America and the British West Indies, and on tickets to places outside of these, $1 if the price exceeded $10, $3 if it exceeded $40, and $5 it it exceeded $65; 10 cents on every sleeping car berth and 5 cents on every parlour car seat; all the foregoing taxes to be collected by the companies concerned and transmitted to the Government. The same act imposed the following stamp duties: 2 cents on every bank cheque and on every express and post office money order and 1 cent on every postal note, 2 cents on every bill of lading, 1 cent extra on every letter and post card, 1 cent for every 25 cents of the retail price of proprietary medicines and perfumery, 3 cents for a pint or less and 5 cents for every quart of non-sparkling wine, and 13 cents for ½ pint or less and 25 cents for every pint of sparkling wine.

By 1916 it was seen that still further taxation was required to maintain the finances of the Dominion in a satisfactory condition. As a result the Business Profits War Tax of that year (chap. 11), was passed, imposing a tax of 25 p.c. of the amount by which the profits earned in business owned by an incorporated company exceeded 7 p.c. per annum, or, in a business owned by any other person or association, exceeded 10 p.c. per annum upon the capital employed in the business. Businesses employing less than $50,000 capital, life assurance companies, businesses engaged in farming and live stock raising, and businesses of which 90 p.c. or more

of the capital was owned by a province or a municipality were exempted, these exemptions not to apply to businesses engaged to the extent of 20 p.c. or over in manufacturing or dealing in munitions or war materials or supplies.

In the 1917 season the Business Profits War Tax was amended (chap. 6), to provide for a tax of 50 p.c. on profits in excess of 15 p.c. per annum, but not exceeding 20 p.c. per annum, and a tax of 75 p.c. on profits in excess of 20 p.c. per annum. In the same session the Income War Tax Act (chap. 28) imposed a tax of 4 p.c. on incomes exceeding $2,000 in the case of unmarried men and widows and widowers without children, and on incomes exceeding $3,000 in the case of other persons. A super-tax was also imposed, progressing from 2 p.c. on the amount by which an income exceeded $6,000 but did not exceed $10,000, up to 25 p.c. on the amount by which an income exceeded $100,000.

In the session of 1918 the Business War Profits Tax Act was amended by chapter 10, extending the operation of the Act to businesses having a capitalization of from $25,000 to $50,000. The Income War Tax Act, as amended by chapter 25, lowered the limit of exemption to $1,000 for unmarried persons and childless widows and widowers and to $2,000 for other persons, the former paying 2 p.c. on incomes between $1,000 and $1,500, the latter 2 p.c. on incomes between $2,000 and $3,000. The normal tax remained at 4 p.c., but the supertax was increased on incomes exceeding $200,000, being graduated up to 50 p.c. on incomes exceeding $1,000,000. A surtax was also introduced, ranging from an additional 5 p.c. of the combined normal tax and super-tax on incomes between $6,000 and $10,000 to an additional 35 p.c. of the normal and super-tax on incomes exceeding $200,000, corporations to pay a tax of 6 p.c. on incomes exceeding $3,000, but no super-tax or surtax. By the Customs Tariff Amendment Act (chap. 17), increased duties were imposed on tea, coffee and tobacco, and by the Act to amend the Special War Revenue Act, 1915 (chap. 46), increased or new taxes were imposed as follows:— For each seat or berth in a parlour or sleeping car 10 cents and 10 p.c. of the price of the seat or berth; one cent on every hundred matches and 8 cents on every package of 54 or fewer playing cards with customs duties of the same amount on these articles when imported; 10 p.c. of the selling price on passenger automobiles, gramophones, etc., and records therefor, mechanical piano players and records therefor and jewellery.

In the 1919 session, the Business War Profits Tax was renewed (chap. 39) for the calendar year 1919: in the case of businesses having a capital between $25,000 and $50,000, profits in excess of 10 p.c. were now to be taxed 25 p.c., businesses having a capital of $50,000 or more to be taxed at the same rate as in previous years. The Income War Tax Act was amended by chapter 55, which increased the general rate of taxation. All corporations paid 10 p.c. of their net income in excess of $2,000, as against 6 p.c. under the former Act. In respect of individuals the normal rate of 4 p.c. was to be levied on all incomes exceeding $1,000, but not exceeding $6,000, in the case of unmarried persons and widows or widowers without dependent children, and upon all incomes exceeding $2,000 but not exceeding $6,000 in the case of all other persons, the respective minima of $1,000 and $2,000 being exempt from taxation. A normal tax of 8 p.c. was levied on the excess of all incomes over $6,000. The surtax was imposed on a progressive scale on all incomes of over $6,000, applying first at the rate of 1 p.c. on the amount by which the income exceeded $5,000 and did not exceed $6,000; then at the rate of 2 p.c. on the amount by which the income exceeded $6,000 and did not exceed $8,000; then at a rate increasing by 1 p.c. for each $2,000 increase of income up to $100,000, so that 48 p.c. was levied on the amount by which the income exceeded $98,000 and did not exceed $100,000; then at 52 p.c. on the amount by which the income exceeded $100,000 and did not exceed $150,000; 56 p.c. on the excess between $150,000 and $200,000; 60 p.c. on the excess between $200,000 and $300,000; 63 p.c. on the excess between $300,000 and $500,000; 64 p.c. on the excess between $500,000 and $1,000,000; 65 p.c. on the excess income over $1,000,000. Chapter 47 provided for the entire repeal of the extra duty of 5 p.c. ad valorem added to the British Preferential Tariff under the Customs Tariff War Revenue Act, 1915, and for the partial repeal in respect of the intermediate and general tariff rates of the excess of $7\frac{1}{2}$ p.c. imposed under the same Act; also for the free importation into Canada of wheat, wheat flour and potatoes from countries not imposing a customs duty on such articles when grown or produced in Canada. Five cents per lb.

was deducted from the duty on coffee roasted or ground under the preferential, intermediate and general tariff schedules and 3 cents per lb. was deducted from the duty on British grown teas under the preferential tariff. Under the general tariff the Act provided for a total reduction (including the 7½ p.c. war duty) from 27½ p.c. to 15 p.c. on cultivators, harrows, horserakes, seed-drills, manure spreaders and weeders and complete parts thereof; from 27½ p.c. to 17½ p.c. on ploughs and complete parts thereof, windmills and complete parts thereof, portable engines and traction engines for farm purposes, horse-powers and threshing machine separators and appliances therefor. On hay-loaders, potato diggers, fodder or feed cutters, grain crushers, fanning mills, hay tedders, farm, road or field rollers, post-hole diggers, and other agricultural implements, provision was made for a reduction of duty to 20 p.c. with a similar reduction on farm wagons. Respecting cement, the war customs duty was repealed and the general tariff rate reduced to 8 cents per 100 lbs. Specific instead of ad valorem rates of duty were enacted for pig-lead, zinc spelter, and copper ingots.

In the session of 1920 chapter 36 amended the Business Profits War Tax Act by exempting from tax profits which during the year 1920 did not exceed 10 p.c. of the capital employed; upon profits exceeding 10 p.c. up to 14 p.c. there was a tax of 20 p.c. of the profits; from 15 to 20 p.c., a tax of 30 p.c.; from 20 to 30, a tax of 50 p.c.; exceeding 30, a tax of 60 p.c. In any business with a capital of $25,000 to $50,000, 20 p.c. tax was charged on the amount by which profits exceeded 10 p.c. of capital; this was also to apply in respect of the profits earned in 1917, 1918 and 1919 on businesses having capital less than $50,000 if 20 p.c. or more of such profits had been derived from business carried on for war purposes. Chapter 49 amended the Income War Tax Act of 1917 in the following particulars: (1) empowering the minister to determine deficits and losses; (2) taxing dividends or shareholders' bonuses; (3) taxing income from an estate or accumulating on trust; (4) increasing by 5 p.c. tax and surtax on incomes of $5,000 or more; (5) requiring that one-quarter tax be forwarded with return, the balance being payable, if desired, by 3 bimonthly instalments with interest at 6 p.c.; (6) imposing severe penalties for default. Chapter 71 amended the Special War Revenue Act of 1915 by imposing a stamp tax on bills and notes, bank statements, overdrafts, bank cheques, sale or transfers of stock, etc.; also by imposing new excise taxes on certain classes of goods, ranging from 3 p.c. to 50 p.c. according to use or value of the goods, and specific duties on certain fluids. In addition, a tax of 1 p.c. was imposed upon wholesale and manufacturers' sales.

In the session of 1921, the excise duties on spirits were increased from a basic rate of $2.40 per proof gallon to a basic rate of $9.00 per proof gallon, the old rates being continued, however, where the spirits were used by licensed manufacturers of patent and proprietary medicines, extracts, essences and pharmaceutical preparations. Under chapter 50 the tax on sales and deliveries by manufacturers and wholesalers and jobbers was raised from 1 p.c. to 1½ p.c. and in the case of sales by manufacturers directly to retailers and customers from 2 p.c. to 3 p.c. Where goods were imported the rates under similar circumstances were raised from 2 p.c. to 2½ and 4 p.c. respectively.

Summary statistics of the war tax revenue from 1915 to 1921 are given in Table 5 and detailed statistics of the war tax revenue collected by the Inland Revenue Department from 1921 in Table 6. In Table 7 are furnished statistics of the yield of the income tax by provinces for the years 1919 to 1921.

National Debt.—The gross national debt of Canada on Mar. 31, 1914, was $544,391,369, as against assets of $208,394,519, leaving a net debt of $335,996,850. Comparatively small as was this debt, it was a debt incurred almost altogether either for public works of general utility which, like the Intercolonial and Transcontinental railways and the canal system, remained assets, though perhaps not realizable assets of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government owned, assisted greatly in extending the area of settlement

as well as the productive and therefore the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes, Also, it was mainly held outside the country, the principal of the Dominion funded debt payable on Mar. 31, 1914, in London being $302,842,485, as against only $717,453 payable in Canada.

The great changes brought about by the war in our national debt have been (1) the enormous increase in net debt from $335,996,850 to $2,422,135,801; (2) as having been largely incurred for war purposes, the gross debt is not represented by corresponding assets; (3) the debt is now mainly held in Canada; (4) the average rate of interest paid on interest-bearing debt has been considerably increased, the interest-bearing debt on Mar. 31, 1914, being $416,892,576, with an annual interest charge of $14,687,797, the average interest rate being thus only 3·52 p.c., while on Mar. 31, 1922, the interest-bearing debt was $2,676,284,300, with an interest charge of $138,190,400, the average rate of interest paid thus being 5·16 p.c. Had it been possible to keep down the rate of interest to its pre-war level, the debt charge would be nearly $44,000,000 less than it is. Post-war conversions of debt to lower rates of interest are likely to reduce substantially our annual interest payments within the next few years.

A summary account of the loans effected since 1914 is appended.

War Loans.—The first Dominion domestic war loan was raised on November, 1915, under authority of chapter 23 of the Statutes of that year (5 Geo. V, c. 23). It originally consisted of $50,000,000 5 p.c. tax-exempt 10 year gold bonds, issued at 97½ and maturing December 1, 1925. As the issue was heavily over-subscribed (public subscriptions by 24,862 subscribers $78,729,500, bank subscriptions $25,000,000) and the extra money was needed, the Government increased the amount of the loan to $100,000,000. In July, 1915, $25,000,000 of 1 year and $20,000,000 of 2 year 5 p.c. notes had been floated in the United States, with the object of stabilizing exchange and of relieving the pressure on London.

In September, 1916, the second Canadian domestic war loan of $100,000,000 5 p.c. tax exempt 15 year gold bonds was issued and again over-subscribed (public subscriptions by 34,526 subscribers $151,444,800, bank subscriptions $50,000,000). In March of that year, a loan of $75,000,000 in 5, 10 and 15 year 5 p.c. bonds had been floated in New York.

The third Canadian domestic war loan, composed of $150,000,000 5 p.c. tax exempt 20 year gold bonds issued at 96, was issued in March, 1917, and was again over-subscribed, 40,800 public subscribers applying for $200,768,000, while the banks subscribed $60,000,000. In August, 1917, $100,000,000 of 5 p.c. 2 year notes were issued in New York at 98.

Hitherto the process of raising money had been comparatively easy. The buoyancy of Canadian finance was illustrated by the increasing subscriptions to

each successive loan, while the Government could, when needed, obtain additional funds in New York. In April, 1917, however, the United States entered the war. Its gigantic preparations drained enormous sums of money from the New York money market, and made it difficult for other countries to raise money there. Henceforth Canada had in the main to depend on her own people to supply the funds necessary for keeping her steadily increasing forces in the field. Subsequent appeals for war loan subscriptions had to be made to the masses of the people rather than to the comparatively few wealthy or comfortably-off investors.

The fourth domestic war loan (First Victory Loan) issued in November, 1917, illustrates the foregoing remarks. For the first time subscriptions as low as $50 were received toward an issue of $150,000,000 5½ p.c. 5, 10 and 20 year gold bonds, the Minister of Finance reserving the right to allot the whole or any part of the amount subscribed in excess of $150,000,000. The subscribers numbered 820,035 and the subscriptions totalled $398,000,000, or about $50 per head of the population of Canada.

The fifth domestic war loan (Second Victory Loan) of $300,000,000 5½ p.c. 5 and 15 year tax exempt gold bonds was issued at 100 and interest as of date November 1, 1918, and the end of the war, then clearly in sight, stimulated public subscriptions. The applications numbered 1,067,879 and totalled $660,000,000.

The sixth domestic war loan (Third Victory Loan) was raised at 100 and interest in November, 1919. It consisted of $300,000,000 taxable 5 year and 15 year 5½ p.c. gold bonds. The subscriptions amounted to $678,000,000.

The general result of these loans has been that in 1921, the great bulk of the Canadian national debt is owing to the Canadian people. At the end of the fiscal year 1920-21, the Dominion net funded debt payable in London was officially stated as $310,334,996, in New York as $135,874,000, while the net funded debt payable in Canada amounted to no less than $1,988,494,357. The largest creditors of the Dominion Government are within the Dominion itself, and as a consequence the interest payments made on National Debt account outside the country are a relatively small item. Detailed statistics of the national debt as on Mar. 31, 1921, are given in Table **14.**

Balance-Sheet.—A summary review of the financial situation of the Dominion as on Mar. 31, 1921, is given in the balance sheet reproduced from pages 2 and 3 of the Public Accounts, 1921 (Table 1). This shows the gross debt on the above date to have been $2,902,482,-117, offset by available assets aggregating $561,603,133, leaving a net debt of $2,340,878,984.[1] Non-available assets, including such public works as canals and railways, also loans to railways, amount in the aggregate to $1,225,377,222, leaving a debit balance on Consolidated Fund Account on Mar. 31, 1921, of $1,115,501,762. The details of the various assets and liabilities are contained in the schedules accompanying the balance sheet and printed in the Public Accounts.

[1]The net debt on March 31, 1922, was $2,422,135,801. See page 659.

1.—Balance Sheet of the Dominion of Canada, as at March 1, 1921.

	$ 2,902,482,117
Balance Net Debt March 31, 1921, brought forward	$ 2,340,878,984
	$ 2,340,878,984

Note.—The Dominion of Canada is also responsible for principal and interest on loans negotiated by Railways under various Acts of Parliament amounting to $222,895,613.

Receipts and Disbursements.—The total receipts on Consolidated Fund account for the fiscal year ended Mar. 31, 1921, were $434,386,537, an increase of $84,640,202 over the preceding year; besides this, special receipts amounted to $1,905,648. The regular expenditure on consolidated fund account was $361,118,145, but special expenditures amounting to $17,489,592 were also charged to this account. There was also an expenditure on capital account of $40,012,807, while advances to railways were made aggregating $109,662,655—as well as miscellaneous advances aggregating $335,000. Thus the total disbursements, exclusive of these advances, amounted to $418,620,544, or inclusive of the advances to $528,618,199, resulting in an addition, after certain readjustments had been made as between available and non-available assets, of $92,010,360 to the net debt (gross debt less available assets).[1]

For the fiscal year ended Mar. 31, 1922, the total receipts on consolidated fund account were $381,952,387, a decline of $52,434,150 from 1921. Expenditure on consolidated fund account was also lower at $347,560,691, a decline of $13,557,454. The surplus of receipts over expenditure on consolidated fund account was therefore $34,391,696.

Detailed statistics of receipts and expenditures on consolidated fund account are contained in Tables **3** and **4**, statistics of war tax revenues in Tables **5** to **7**. Tables **8** and **9** are historical tables giving the figures of the main items of Dominion receipts and expenditure since Confederation, while Table **10** shows the per capita receipts and expenditure for these years according to census and estimated populations.

Public Debt.—On March 31, 1922, the gross debt of the Dominion was $2,902,347,137, which, after active assets amounting to $480,211,336 are deducted, leaves a net debt of $2,422,135,801. The gross interest charge for the year was $135,247,849, which, after interest amounting to $21,961,513 had been received on the assets, leaves a net interest charge of $113,286,336 (Table **11**). The details of the assets and liabilities are published in Tables **12** to **14**, while Table **15** gives a historical conspectus of the growth of the public debt since Confederation.

NOTE.—The years marked with an asterisk (*) are those of the Census, April 2, 1871, April 4, 1881, April 6, 1891, April 1, 1901, June 1, 1911 and 1921. In all other cases the population is estimated at the close of each fiscal year: June 30 from 1868 to 1906, March 31 from 1907 to 1910, and June 1 from 1911 to 1922. The fiscal period of 1907 is for the nine months ended March 31.

11.—Public Debt of Canada, March 31, 1916-1922.

Description.	1916.	1917.	1918.	1919.	1920.	1921.	1922.

NOTE.—The minus sign (−) denotes a decrease.
[1]This amount includes $3,305,450.24, caused by the settlement of accounts with Ontario and Quebec.
[2]This amount takes into account $5,397,503.13 allowed to Ontario and Quebec, under 47 V., c. 6.
[3]Active assets only.

Provincial Subsidies.—Tables **16** and **17** show the amounts of the subsidies and other payments made by the Dominion to the Provincial Governments for each of the years 1916 to 1921 (Table **16**), and the totals paid from Confederation to date (Table **17**). The Provincial subsidies payable by the Dominion Government were originally settled by the British North America Act, 1867 (30 and 31 Vict., c. 3, s. 118), but were revised by the British North America Act, 1907 (7 Edw. VII, c. 11). Under the revised settlement each Provincial Government receives (a) a fixed grant according to population and (b) a grant at the rate of 80 cents per head of the population up to 2,500,000, and at the rate of 60 cents per head of so much of the population as exceeds that number. The Province of British Columbia received an additional grant of $100,000 per annum for a period of 10 years from 1907.[1] An additional grant of $100,000 per annum is payable to Prince Edward Island under an Act of 1912 (2 Geo. V., c. 42), and the payments to Manitoba were revised by the Extension of Boundaries (Manitoba) Act (2 Geo. V, c. 32).

[1] See Canada Year Book 1907, pp. xxxiii-iv.

Other payments to the Provincial Governments by the Dominion Government consist of special grants, as compensation for lands and allowances for buildings, allowances in lieu of debt, etc.

[1] Compensation for lands and allowances for buildings.
[2] Allowance in lieu of debt.

Inland Revenue.

Under the Inland Revenue Act (R.S. 1906, c. 5), the Department of Inland Revenue until 1918 had the control and management of the collection of excise duties, of stamp duties, internal taxes, standard weights and measures and of the collection of bridge and ferry tolls and rents. It administered the statutes which deal with the adulteration of food and other articles, electricity and gas inspection, patent medicines, petroleum, naphtha and the analysis of fertilizers and feeding stuffs. The Department also established the food standards, which were put into force from time to time by Orders in Council under the authority of Section 26 of the Adulteration Act. For the year ended March 31, 1921, the total inland revenue of the Dominion amounted to $116,916,991, as compared with $58,928,536 in 1920. By Order in Council, dated May 18, 1918, the Department of Customs and the Department of Inland Revenue were amalgamated and combined under the name of the Department of Customs and Inland Revenue under one Minister of the Crown. By Order in

Council dated June 3, 1918, the administration of the Gas, Electric Light and Weights and Measures Inspection Acts, the Adulteration of Food, Commercial Feeding Stuffs, Fertilizers, Proprietary and Patent Medicine and Inspection of Water Meters Acts was transferred to the Department of Trade and Commerce as from September 1, 1918. On June 4, 1921, the Departments of Customs and Inland Revenue were amalgamated, under one Minister, as the Department of Customs and Excise (11-12 George V, chap. 26).

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as existing on July 1, 1922:—

Spirits—	
When made from raw grain, per proof gal..	$9.00
When made from malted barley.....	9.02
When made from imported molasses or other sweetened matter free of Customs duty, per proof gal.....	9.03
Malt, per lb.....	0.03
Malt, imported, crushed or ground, per lb...	0.05
Malt liquor, when made in whole or part from any other substance than malt, per gal.....	0.15
Tobacco, per lb.....	$0.20
Cigarettes, weighing not more than 3 lb. per M, per thousand.....	7.50
Cigarettes, weighing more than 3 lb. per M, per thousand.....	12.50
Foreign raw leaf tobacco, unstemmed, per standard lb.....	0.40
Foreign raw leaf tobacco, stemmed, per standard lb.....	0.60
Canada twist tobacco, per lb.....	0.20
Snuff, per lb.....	0.20
Cigars, per M.....	3.00
Cigars, when put up in packages of less than 10 each, per M.....	4.00

When, however, any person is licensed by the Minister of Customs and Inland Revenue to manufacture patent and proprietary medicines, extracts, essences and pharmaceutical preparations by the use of spirits in bond, subject to the Inland Revenue Act and regulations thereunder, the following duties of excise shall be collected: when made from raw grain, $2.40 per proof gallon; when made from malted barley, per proof gallon $2.42; when made from imported molasses or other sweetened matter free of customs duty, per proof gallon $2.43. Druggists licensed by the Minister of Customs and Inland Revenue to prepare prescriptions for medicines and pharmaceutical preparations, are also allowed to use limited quantities of spirits testing not less than 50 p.c. over proof on payment of the above lower manufacturer's rates of duty. A drawback of 99 p.c. of the duty may be granted when spirits testing not less than 50 p.c. over proof are delivered in limited quantities to universities, scientific or research laboratories or hospitals for medicinal purposes only.

Consumption of Alcohol and Tobacco.—The separate sources of inland revenue for the years 1916 to 1921 are set out in Table **18.** The two largest sources of inland revenue used to be spirits and tobacco, which together accounted for over 80 p.c. of the total in 1913 and about 65 p.c. of the total in 1920; however, owing to the increased yield in the war taxes, spirits and tobacco produced only about 28 p.c. of the 1921 inland revenue. Tables **18** and **19** in the edition of 1916-17 showed that the consumption of alcoholic liquors and of tobacco tended annually to increase, both absolutely and relatively per head of the population up to the year 1913. For the year 1912-13 the consumption of spirits reached its highest point, viz., 1·112 gallon per head. For the year 1913-14 the consumption of malt liquor rose to its highest point, viz., 56,060,846 gallons, or

7·2 gallons per head (Table **21**). Under the influence of the war and resulting restrictive legislation a marked decrease in the consumption of liquor and tobacco became apparent, the consumption of spirits falling to 0·391 gallons per head in the fiscal year ended March 31, 1919, of wine to 0·025 gallons, of beer to 2·948 gallons, of tobacco to 3·109 lbs. The general prosperity evident in the following year led to a considerable increase in consumption of liquors and tobacco, followed by a decline in the consumption of wine, beer and tobacco in 1921, due in some measure to the industrial depression. For the same reason the consumption of cigars fell from 270,089,761 to 214,262,197, a decline of more than 20 p.c. (See Table **20** for further details).

18.—Excise and other Inland Revenues for the Fiscal Years 1916-1921.

Sources of Revenue.	1916.	1917.	1918.	1919.	1920.	1921.

PROVINCIAL PUBLIC FINANCE.

Provincial Governments in Canada are in the position of having, under section 118 of the British North America Act, 1867 (30 and 31 Vict., c. 3), and the British North America Act, 1907 (7 Edw. VII, c. 11), a considerable assured income paid to them in subsidies from the Dominion Treasury. Details of these payments are given for recent years in Tables **16** and **17** of this section. In addition, through their retention of ownership of their lands, minerals and other natural resources, the provinces which by the voluntary action of their previously existing governments entered Confederation, raise considerable revenues through land sales, sales of timber, mining royalties, leases of water-powers, etc., while the prairie provinces receive from the Dominion special grants in lieu of land revenues.

Further, under section 92 of the British North America Act, 1867, Provincial Legislatures are given authority to impose direct taxation within the province for provincial purposes and to borrow money on the sole credit of the province. While the *laisser faire* school of political thought was predominant throughout the country, provincial receipts and expenditures were generally very moderate, as may be seen both for individual provinces and for the provinces collectively, from Table **23**. From the commencement of the twentieth century, however, the Canadian public, more especially in Ontario and the West, began to demand increased services from the government, particularly along the lines of education, sanitation, public ownership and operation of public utilities. The performance of these functions necessitated increased revenues, which had in the main to be raised by taxation. Among the chief methods of taxation to be employed have been the taxation of corporations and succession duties, the latter showing a considerably increased yield even within the comparatively short period of five years from 1916 to 1920 covered by the comparative statement compiled by the Finance Branch of the Dominion Bureau of Statistics,[1] and published as Table **25**. Prominent among the objects of increased expenditure in this same period are education, public buildings, public works and enterprises and charities, hospitals and corrections. The fact that provincial government is cheaper per head in the *laisser faire* eastern provinces is evident from Table **24**, which gives the total and per capita ordinary revenue and expenditure for each of the three provincial fiscal years ended in 1920. This, however, is not to be taken as evidence that the larger services rendered to the public in the western provinces are not worth what is being paid for them.

For the half century subsequent to Confederation the provincial accounts, published by each Government according to its own system of accounting, were quite incomparable as between the provinces, a fact much regretted by students of provincial public finance. Upon the creation of the Dominion Bureau of Statistics in 1918, its Finance Branch undertook the work of placing the varying provincial public

[1]The succession duties collected by the provinces in 1920 amounted in the aggregate to $7,335,728, as compared with $1.020.972 as recently as 1904, or a seven-fold increase in 16 years. The aggregate revenue raised by taxation of corporations, etc., increased from $7,217,548 in 1916 to $19,207,699 in 1920.

accounts on a comparable basis. As the result of an exhaustive detailed analysis of the provincial public accounts, a summary statement of the ordinary receipts and expenditure of the Provincial Governments appeared in the 1919 Year Book for the first time on a comparable basis. In the present issue is published an analysis of the provincial public accounts for the five fiscal years from 1916 to 1920. All doubtful points have been cleared up by correspondence between the Bureau and the provincial authorities concerned. The various items of receipts and expenditures have been classified under appropriate headings, and a uniform terminology has been adopted. The result is given in Tables **25** and **26**, which present for each of the five provincial fiscal years from 1916 to 1920 summary statements of the ordinary receipts and expenditures of all the Provincial Governments, as classified under principal headings. From these statements it is possible to ascertain the amounts received and expended in each year under the respective headings for each province, while Table **27** supplies the same information for the provinces collectively.

In the use of these tables it should be borne in mind that the fiscal years in the different provinces do not coincide. In Prince Edward Island, Manitoba and Alberta the fiscal year ends December 31, in Nova Scotia, September 30, in New Brunswick and Ontario, October 31, in Quebec, June 30, in Saskatchewan, April 30, and in British Columbia March 31.

The total ordinary revenue of the nine provinces for the latest fiscal year available, 1920, was $92,653,023 as compared with $76,844,307 in 1919, $69,345,305 in 1918, $57,989,984 in 1917 and $50,015,795 in 1916. The total ordinary expenditure in 1920 was $88,250,675 as against $76,403,973 in 1919, $66,052,909 in 1918, $60,122,485 in 1917 and $53,826,219 in 1916. Thus the total ordinary revenue of the provinces shows an increase of 85·2 p.c. in the short space of four years, while the total ordinary expenditure shows an increase of 63·9 p.c. The main cause of the increasing expenditure has been, of course, the rapid rise during the period in the prices of the commodities and labour required for the public service, while the extension of the functions of government has also been a considerable factor.

Considering the individual provinces, the largest revenue for 1920 is that of Ontario, $25,981,517, Quebec being next with $14,472,651 and British Columbia third with $13,866,603. As regards total expenditure for the same year, that of Ontario was highest, $25,880,843, Quebec being second with $13,520,740 and British Columbia third with $11,568,003. In 1920 British Columbia raised the largest revenue per head of population, $27.14, while Quebec had the lowest, $6.23.

Provincial Assets and Liabilities.—The asset and liability statements of the provinces vary so greatly in their content that heretofore no attempt has been made to publish any collective statement. In some instances natural resources, such as timber, mining, agricultural and school lands unsold, are shown as assets, while in others no account is taken of these. In some cases provincial government buildings with lands connected therewith, also roads,

bridges and public improvements are considered as assets, while other provinces do not include them in their published statements. With a view to presenting the principal items which make up provincial assets and liabilities, the following co-ordinated table (Table **28**) has been compiled, in consultation with the various provincial audit departments. Other miscellaneous assets of the provinces are briefly enumerated. Indirect liabilities, which are separately given, consist mainly, as shown by the foot-notes, of guarantees of bonds and debentures. Generally speaking, both the assets and the liabilities of the provinces in which public ownership of public utilities exists, are proportionately larger than is the case in the other provinces.

23.—Statement showing the Ordinary Revenues and Expenditures of the Provincial Governments, for their respective fiscal years 1869-1920.

ment of Government Stocks and Bonds, (f) Public Improvements, (g) Royal Commissions, (h) Patriotic Purposes, (i) Other Expenditures, (j) Miscellaneous.

(10) Natural Resources, including (a) Pine Timber, (b) Pulpwood, Timber, Ties, Poles, Hardwood, etc., (c) Mining Lands and Profits, (d) Agricultural Lands, (e) Water Powers, (f) Sand, gravel, etc., (g) District of Patricia area 146,000 sq. miles Timber, Fisheries, Fees and Mining Possibilities, (h) Unsold school lands.

LIABILITIES.

(1) Dominion Government, including (a) Agricultural Aid, unexpended Balance, (b) Administration Agricultural Aids Act, (c) Housing Act Loan, (d) Dominion Subsidy Paid in Advance, (e) Balance of Account, 1902, (f) Purchase of Property Q.-M. O. Railway, (g) Loans, (h) Public Health Aid unexpended Balance.

(2) Debentures, including (a) Provincial, (b) Adminsitration Farms Loans Act.

(3) Bonds, including (a) Provincial, (b) Court House, (c) Government Bonds and Stock. (d) Profit on Bond Conversion.

(4) Stocks, including (a) Stock inscribed (London, England), (b) Registered, (c) Stocks.

(5) Treasury Bills.

(6) Loans, including (a) Short Term Special. (b) Loan Account, (c) Due Bank, (d) Temporary Loans, (e) Loans (Funded Debt).

(7) Bank Overdrafts and Debit Balances.

(8) Sinking Funds, including (a) Replacement reserves, (b) Municipal, (c) Invested.

(9) Miscellaneous, including (a) Certificates (Railway and Annuity), (b) Trust Funds and Deposits, (c) Mortgages (B.C. Building, London, England), (d) Interest (1) on securities (2) accrued (not due), (e) Supplementary Revenue Fund, (f) School Grants, (g) Amounts Payable, (h) Licenses paid in advance, (i) Liabilities for Capital Expenditure, (including Railways, Bridges, Roads, etc.), (j) Outstanding Warrants, (k) Miscellaneous.

(10) Indirect Liabilities, including (a) Guarantee of Bonds and Loans in Nova Scotia, (b) Bonds guaranteed by Province of New Brunswick, (c) Debentures and Loans for Railways, Institutions, Schools, etc., in Quebec, (d) Guarantees of Debentures for Toronto University, Niagara Falls Park, Toronto and Hamilton Highway Commission, Towns of Bruce Mines, Cochrane and Matheson, Township of Tisdale, Separate School Board, Town of Timmins and Hydro-Electric Power Commission for Ontario, (e) Principal and Interest guaranteed for C.N.R. Securities, Municipal Debentures and Manitoba Farm Loan Association Securities (in addition interest only has been guaranteed on Municipal Debentures par value $99,500, also rentals payable to N.R. Ry. Co. for certain railways leased) in Manitoba, (f) Guarantees of Principal and Interest on Securities, Railways, Sewerage and Drainage Board, Dyking Districts, War Reduction Co. and Agricultural Credits Commission in province of British Columbia.

MUNICIPAL PUBLIC FINANCE.

The statistics of the rural and urban population of Canada appearing on page 101 of this issue of the Year Book, show that between 1901 and 1921, the urban population of Canada more than doubled, increasing from 2,014,222 to 4,352,442; further, this growth has been greater in the cities, more especially the larger cities, than in the towns and villages. The aggregation of great numbers of people into the cities within a comparatively short space of time has made it necessary for costly public services to be furnished to the new-comers. Problems of water supply, road and bridge building, police and fire protection, sanitation and sewage, transportation, education, public health and recreation, have been faced and more or less satisfactorily solved, often at great expense. Some municipalities, indeed, in the period before the war considered it expedient to provide public services for prospective as well as for existing population, and later found that the prospects did not become actualities as rapidly as they had expected. The results of the great actual growth and the great expectations of growth was a rapid increase in municipal taxation which has made municipal public finance a very important part of the public finance of Canada, attracting a very considerable amount of attention from theoretical students of public finance, from municipal officials, from bond houses and generally from the urban ratepayer.

Investigators of municipal public finance have, however, found great difficulties in pursuing their studies on account of the incomparability of the statistics collected by Provincial Governments, or the entire absence of such statistics, only six provinces compiling and publishing their municipal statistics in 1919. Accordingly, in response to suggestions from the Union of Canadian Municipalities and the Municipal Improvement League of Canada, the Dominion Bureau of Statistics undertook to collect independently through its Finance Branch the statistics for a fixed group of municipalities, of 10,000 population or over, according to schedules and methods of compilation approved by the provinces. The results of the first investigation for the calendar year 1919 were published in summary form on pages 570 to 580 of the 1920 Year Book, as well as in greater detail in a special report.

Statistics of Urban Municipalities of 10,000 Population and over.—In the present issue of the Year Book the statistics for 1920 of Canadian cities of 10,000 population and over are printed in considerable detail, a summary of the more important statistics being given by provinces and for the whole country in Table **29**, which shows that the 57 cities included in the report had in that year taxable land and buildings assessed at $2,786,894,948 and tax-exempt land and buildings assessed at $686,365,646. Their ordinary receipts aggregated $168,840,792, of which $94,407,640 were derived from

taxation, being $33.38 per head of the census population; their extraordinary receipts were $41,679,648, a total of $210,520,440, while their grand total expenditure was $210,692,259. Available and revenue-producing assets amounted to $389,148,880, and total assets to $809,861,299, while total liabilities were $675,610,501. For individual cities statistics of receipts are given in Table **30**, of expenditures in Table **31**, of assets and liabilities in Table **32.**

Statistics of Urban Municipalities of from 3,000 to 10,000 Population.—According to the statistics compiled and published by the Finance Branch of the Dominion Bureau of Statistics for urban municipalities with a population of from 3,000 to 10,000, the 103 municipalities of this class reporting had in the calendar year 1919 an estimated population of 552,668. The aggregate value of taxable property was in that year $280,294,473, and of property exempted from taxation $108,239,833. The total ordinary receipts of these 103 municipalities were $15,309,562, of which $9,380,217 were derived from taxes, being $16.97 per head of the estimated population. The extraordinary receipts were $4,476,454, bringing the total receipts up to $19,786,016. The aggregate ordinary expenditures were $15,185,024 and extraordinary expenditures $5,209,137, a grand total of $20,394,161. The aggregate available assets were $58,751,681, and the aggregate liabilities $55,719,411.

Statistics of Smaller Urban Municipalities of 1,000 to 3,000 Population.—Statistics have been compiled and published for 1920 by the Finance Branch of the Dominion Bureau of Statistics for 241 towns and villages having an estimated population in that year of between 1,000 and 3,000, and an aggregate estimated population of 419,197. The aggregate value of the taxable property in these municipalities in 1920 was $227,073,141, and of property exempted from taxation $49,295,401. The total ordinary receipts of the 241 municipalities were $10,684,795, of which $7,375,878 proceeded from taxation, or $17.59 per head of the estimated population; the total extraordinary receipts were $5,448,829, bringing the total receipts (including $35,306 not classified as ordinary or extraordinary) to $16,168,930. Aggregate ordinary expenditures were $11,318,446 and extraordinary expenditure $4,848,881, making the grand total expenditure (including $32,661 not classified) $16,199,988. Aggregate available assets were $37,718,157, and aggregate liabilities $33,407,405.

All these reports may be obtained on application to the Dominion Statistician.

NOTE.—According to the census of 1921, 55 cities in Canada had at that time a population of 10,000 or over. The municipal authorities of Amherst, Dartmouth and New Glasgow, all in Nova Scotia, and of Oshawa and North Bay in Ontario, had previously estimated their populations as being 10,000 or over; they were classified as such in the 1919 report and are here retained for comparative purposes. Three urban municipalities having more than 10,000 population by the census, failed to send in a report and are not included; viz., Guelph, Glace Bay and Shawinigan Falls.

Building Permits.—Table 33 shows the value of the building permits issued by 35 cities for each of the years 1918, 1919, 1920 and 1921. For the year 1921 the total value of the building permits in the table was $94,508,164, as compared with $100,679,839 in 1920, a decrease of $6,171,675.

33.—Values of Building Permits taken out in 35 cities in 1918, 1919, 1920 and 1921.

The Hydro-Electric Power Commission of Ontario.

The Hydro-electric scheme in Ontario had its beginning in 1903, when seven municipalities united in an investigation of the transmission possibilities of Niagara power. The Ontario Power Commission, which was created to report on the question, favoured the construction of a generating plant at Niagara Falls and the Hydro-Electric Power Commission of Ontario was formed in 1906 to carry out its recommendations.

The capital required by the Commission for its transmission plant was provided by issues of bonds guaranteed by the Government of Ontario, whose security was something more corporate than that of

the associated municipalities. The contracts between the Commission and the municipalities called for repayment to the Government in thirty years.

When a municipality wishes to become part of the Hydro system an engineer of the Commission reports on the cost of connection with the existing transmission lines. Then the question of joining the Hydro is voted upon under a civic by-law, which, if passed, is followed by another giving the necessary money. The local distribution system is financed by an issue of municipal debenture bonds to be retired in twenty years. Monthly bills are sent by the Commission to the municipalities, based upon an approximation to the yearly expense incurred in supplying power to the municipality, and at the year's end a thirteenth statement is sent which brings the approximation to a true account. Like any efficient business concern, the Commission makes provision from the charges for power for sinking funds, repairs and replacements.

The Commission had been given authority to generate its own power, but chose rather to contract for power from the Ontario Power Company at $9.40 for the first 25,000 h.p. and $9.00 for any in addition up to 100,000 h.p. In 1916 power was purchased from the Canadian Niagara Power Company as well, and in the following year the Ontario Power Company was acquired through purchase of practically all the stock. It was at this time that the Queenston-Chippawa development was begun. Of the total drop of 327 feet between Lake Erie and Lake Ontario, the Ontario Power Company used only 180 feet at Niagara Falls; the Queenston-Chippawa development takes water through a power canal from the Welland river a distance of 12½ miles to Queenston, where the generating plant operates under a net head of 305 feet. Thus for the same diversion of water the Queenston-Chippawa development generates 29·4 h.p. to every 14·6 h.p. generated by the Ontario Power Company.

The Queenston-Chippawa development was begun in 1917 as a war measure when the consumption of power in munition factories was greatest, at a time when the duration of the war could not be foreseen. High wage costs and high prices of material placed construction costs far above the original estimate of $10,500,000, besides which the ultimate capacity of the plant was enlarged. The cost of completing the first five units totalling 275,000 h.p. is now estimated at approximately $60,000,000.

The growth of the Hydro system in Ontario is shown in the amount of power used by its customers. In 1910, the Commission supplied 750 h.p. to 10 municipalities; in 1915, 100,242 h.p. to 99 municipalities; in December 1921, 242,349 h.p. was distributed, 81.7 p.c. of which was supplied to the Niagara district. "The government electric utilities in Ontario have grown from a league of seven municipalities formed in 1903 until now the vested interests of the people in this class of property are represented by investments totalling nearly $200,000,000, the bonded indebtedness of which is guaranteed by the Province of Ontario".

Hydro-Electric Power Statistics.—The Canada Year Book of 1910 (p. xliii) described the installation on October 11, 1910, at Berlin, now Kitchener, Ontario, of electrical energy generated by the Niagara Falls, and the initial work carried out by the Ontario Hydro-Electric Power Commission for the supply of electrically generated power to 15 municipalities. Table **34** gives for 1920 the financial statistics of the electrical installations of 184 municipalities. It shows that the cost of operations for the year 1920 was $8,094,057, and that the revenue was $9,707,901, leaving a surplus of $1,613,844, less a depreciation charge of $902,029, making the net surplus to be $711,815. The total number of consumers in the 184 municipalities for 1920 was 245,666 as against 216,086 in 1919, 170,916 in 1917 and 148,732 in 1916. Of the total in 1920, 199,094 were domestic light consumers, 37,173 were commercial light consumers, and 7,173 were power consumers, while 2,236 were rural consumers. The total horsepower taken in December, 1920, was 208,232 for 184 municipalities, as compared with 185,355 for 181 municipalities in December 1919, 157,048 for 143 municipalities in December, 1917, and 120,768, for 128 municipalities in December, 1916. Table **35** is a detailed statement of the assets and liabilities of the municipalities served by the Commission for the four years 1917 to 1920. The total assets have grown from $24,427,276 in 1917 to $34,615,361 in 1920.

34.—Statement of Earnings and Operating Expenses of Electric Departments of Municipalities served by the Ontario Hydro-Electric Commission for the calendar years 1917-1920.

CURRENCY AND BANKING.

During the French period in Canada the currency of the country was in an extremely unsatisfactory condition—a condition mitigated by the fact that most transactions were carried on by means of barter. Beaver and other furs, tobacco and wheat were at times used as substitutes for currency, the last named being at one time a legal tender. Perhaps still less satisfactory to its holders was the use of playing cards, stamped with a value and signed by the Intendant, as paper money. Other paper money was also issued and the total amount of Canadian paper money outstanding at the time of the cession was estimated at 80,000,000 livres, the great bulk of which was finally lost to its holders. In order to establish a more stable

currency the new government imported and paid out large quantities of Spanish milled dollars at 4s. 6d. per dollar, or $4.44 4-9 per pound sterling, constituting the old par of exchange until lately used by Canadian banks as a basis of calculating sterling exchange. During the war of 1812 the British Government established an Army Bill Office authorized to issue bills of various denominations which were duly redeemed on presentation. These familiarized the Canadians with a sound paper currency, and their withdrawal after the war left a gap which was filled up later by bank note issues.

From the time of the cession, Canadians had been familiar with the dollar; now they came more and more closely into touch in their trade relations with the United States. The result of their familiarity with the decimal currency was that in 1853 a measure was passed providing for the adoption of the decimal currency with a dollar equivalent to the American dollar; the British sovereign was made legal tender at $4.86\frac{2}{3}$. An act of 1857 requiring all government accounts to be kept in dollars and cents came into force on Jan. 1, 1858, from which dates the formal adoption of decimal currency in the province of Canada.

By the Uniform Currency Act of 1871 (34 Vict., c. 4), the decimal currency was extended throughout the Dominion, the British sovereign was made legal tender for $4.86\frac{2}{3}$ and the United States eagle made legal tender for $10, while authority was taken to coin a Canadian $5 gold piece. No Canadian gold coinage was, however, issued prior to the establishment of the Canadian branch of the Royal Mint in 1908, the first coins then struck being sovereigns similar to those of Great Britain, but with a small "C" identifying them as having been coined in Canada. In May 1912 the first Canadian $10 and $5 gold pieces were struck, but the Canadian gold coinage has so far been limited in amount, since Canadians have generally preferred Dominion notes to gold, for use within the country, and when gold is needed for export, British or American gold coin or bullion serve the purpose equally well.

Gold.—Gold is used only to an insignificant extent as a circulating medium in Canada, its monetary use being practically confined to reserves, but 5 dollar and 10 dollar gold pieces weighing respectively 129 and 258 grains, 9-10 pure gold by weight, have been coined, the Canadian gold dollar thus containing 23·22 grains of pure gold. These coins were first issued in 1912, authority to issue them having been first conferred in 1910. By the Currency Act, 1910 (9–10 Edw. VII, c. 14), British sovereigns which are legal tender for $4.86\frac{2}{3}$, and other gold coins, and the 5 dollar, 10 dollar and 20 dollar gold coins of the United States, which contain the same weight of gold as Canadian gold coins of these denominations, are also legal tender. These, however, are almost entirely divided between the Dominion Government and the banks as reserves, and the chief circulating medium of the country is provided by paper and token currency. The gold coinages of the Ottawa branch of the Royal Mint, which was opened on January 2, 1908, are given in Tables **36** and **37.** Table

38, compiled by the Dominion Comptroller of Currency, gives the form in which the gold has been held by the Government in recent years. The American gold, it will be seen, greatly preponderates, and there is a considerable additional amount held by the banks, as it is legal tender in both countries.

Token Currency.—Canadian silver dollars weighing 360 grains, 37-40 fine, are provided for by the Currency Act of 1910, but no dollar coins have ever been struck by the Mint. Fifty, twenty-five, ten and five-cent pieces of weight proportionate to their respective fractions of the dollar, and of the same fineness, are in circulation, but by chapter 9 of the Statutes of 1920 the standard of fineness was reduced to 8-10. In 1921 the coinage of a nickel five-cent piece weighing 70 grains was authorized and a number of these coins have appeared. Silver coins are legal tender only up to ten dollars, and bronze coins to twenty-five cents.

Dominion Notes.—An important part of the Canadian monetary system is the paper currency of the Dominion Government. Under the Dominion Notes Act, 1914 (5 Geo. V, c. 4), the Dominion Government is authorized to issue notes up to and including $50,000,000 against a reserve in gold equal to one-quarter of that amount. By Chapter 4, Acts of 1915 "An Act respecting the issue of Dominion Notes" the Dominion Government is authorized to issue notes up to $26,000,000 without any reserve of gold, $16,000,000 of the notes to be against certain specified Canadian railway securities guaranteed by the Dominion Government.[1] Notes may be issued to any additional amount in excess of $76,000,000, but (except as provided by the Finance Act, 1914), an amount of gold equal to the excess must be held. Thus Dominion notes are under normal conditions gold certificates. Under the Act, the Government issues notes of the denominations of 25 cents, $1, $2, $4, $5, $50, $100, $500, $1,000. In addition, "special" notes of the denominations of $500, $1,000, $5,000 and $50,000 (first issue September, 1918), are issued for use between

[1]The following is an outline of Canadian legislation respecting the issue of notes. After Confederation, by an Act of 1868 (31 Vict., c. 46), authority was given for the issue of notes to the extent of eight million dollars. The reserve was fixed at 20 p.c. up to a circulation of five millions; beyond that, 25 p.c. to be held as reserve. The law of 1870 (33 Vict., c. 10), authorized a limit of nine million dollars. The reserve was fixed at 20 p.c., but the nine millions were only to be issued when the specie amounted to two millions. Dollar for dollar was to be held beyond nine millions. In 1872 (35 Vict., c. 7), the reserve for the excess over nine millions was fixed at 35 p.c. in specie. This was amended in 1875 (38 Vict., c. 5), by requiring dollar for dollar beyond twelve millions; for the reserve between nine and twelve millions 50 p.c. in specie was to be held. In 1878 the law respecting Dominion notes was extended to the provinces of Prince Edward Island, British Columbia, and Manitoba. In 1880 (43 Vict., c. 13), the basis of the present standard was established. A reserve of 25 p.c. in gold and guaranteed debentures was required, of which 15 p.c. at least must be in gold. The limit was raised to twenty million dollars. In 1894 (57-58 Vict., c. 21), the limit was raised to twenty-five millions, but this was found unworkable and was repealed in 1895 (58-59 Vict., c. 16), and authority was given to issue notes to any amount over twenty millions, on holding dollar for dollar beyond that sum. In 1903 (3 Edw. VII, c. 43), the Minister of Finance was required to hold gold and guaranteed debentures of not less than 25 p.c. on Dominion notes issued and outstanding up to thirty million dollars; beyond thirty millions he was required to hold gold equal to the excess. In 1914 (5 Geo. V, c. 4), this amount was raised to fifty millions and in 1915, to seventy-six millions, under the conditions stated in the text. The Finance Act, 1914 (5 Geo. V, c. 3), makes provision, in case of war, panic, etc., for the issue of Dominion notes against approved securities.

banks only, the purpose being to safeguard against theft. Table **41** shows how the different denominations have run during the past six years in the circulation. Table **40** gives the main statistics of Dominion note circulation and the reserve on which it has been built since 1890.

Bank Notes.—The circulating medium chiefly in use in Canada is in the form of bank notes. Under the Canadian Bank Act, the banks are authorized to issue notes of the denominations of $5 and multiples thereof to the amount of their paid-up capital. These notes are not in normal times legal tender. In case of insolvency the notes of a bank are a first lien upon the assets. They are further secured, in case of insolvency, by the Bank Circulation Redemption Fund, to which all banks contribute on the basis of 5 p.c. of their average circulation, the sum thus secured being available for the redemption of the notes of failed banks. In addition, during the period of the movement of the crops (September 1 to February 28-29), the banks may issue "excess" circulation to the amount of 15 p.c. of their combined capital and "rest or reserve" funds. In the event of war or panic the Government may permit the "excess" to run all the year. The banks pay interest on the excess at 5 p.c. If a bank desires to exceed its circulation it may, under the last revised Bank Act of 1913, do so by depositing dollar for dollar in gold or Dominion notes in a central gold reserve. The figures of bank note circulation are given in Table **42.** Table **43** brings together the results obtained above as to the quantity of the circulating medium in the hands of the Canadian public.

[1]Dominion Notes of larger denominations in hands of banks not included.
[2]Includes Provincial Notes amounting to $28,811 in 1900 and reduced gradually to $27,743 in 1921.
[3]Yearly average. [4]At end of June in each year. [5]Per capita circulation in 1900=100.

Banking.

In the early days of banking in older countries, one of the chief functions of banks was to issue promissory notes payable to the bearer on demand; where the bank's credit was good these notes passed freely from hand to hand, creating an auxiliary uniform circulating medium, which in various cases was preferred to that issued by national governments.

The lack of a uniform circulating medium in Canada was felt by the merchants of Montreal toward the end of the eighteenth century, and the prospectus of a proposed bank of issue to be known as The Canada Banking Company was issued in 1792. This scheme, however, was allowed to drop, while a second project in 1808 for the incorporation of a Bank of Canada, failed to secure the assent of the legislature of Lower Canada.

At the close of the war of 1812 the Army Bill currency was withdrawn, and public attention once more turned to the expediency of securing a currency through the establishment of banks. The Bank of Montreal began business toward the end of 1817, with a charter based on that of the first Bank of the United States. In the following year the Quebec Bank was established, as well as the Bank of Canada at Montreal and the Bank of Upper Canada at Kingston. The three Lower Canadian institutions, commencing as private banks, obtained their charters in 1822, while the bank of Upper Canada, also a private institution, was superseded by a second Bank of Upper Canada, established at York (Toronto) as a chartered bank in 1821. Meanwhile the Bank of New Brunswick had been incorporated in 1820, while in Nova Scotia the Halifax Banking Co. (private) had commenced business in 1825, and the Bank of Nova Scotia received a regular charter in 1832. The Bank of British North America, previously incorporated in Great Britain, commenced business in Canada in 1836, while Molson's Bank was established in 1853, the Bank of Toronto in 1855, the Banque Nationale in 1860 and the Banque Jacques-Cartier (now the Banque Provinciale du Canada) in 1862. The Merchants Bank was established in 1864, the Union Bank in 1866, the Canadian Bank of Commerce in 1867, the Merchants' Bank of Halifax (now the Royal Bank) in 1869, the Dominion Bank in 1871, the Bank of Hamilton in 1872, the Banque d'Hochelaga in 1873, the Bank of Ottawa in 1874, the Imperial Bank in 1875 and the Standard Bank in 1876.

Banking Legislation.—As has already been stated, note issue was formerly considered as the chief function of the banks and banking legislation dealt mainly with note issue. In 1830 the Banking Act was amended so that the total amount of notes of less than $5 in circulation might not at any one time exceed one-fifth of the paid up capital; that no notes under $1 should be issued and that all issues of less than $5 might be limited or suppressed by the legislature. In 1841, in the first session of the Canadian Legislature after the Union, the Banking Act imposed a tax of one p.c. upon the bank note circulation together with the double liability. In 1850 a new Act prohibited any bank other than those incorporated by Act of Parliament or Royal Charter from issuing notes. The tax on circulation was abolished, and instead a deposit with the Government of $100,000 in provincial debentures was required; for the first time monthly bank statements were required to be furnished to the Government.

In 1871 the first Dominion Bank Act provided for a minimum capital of $500,000, the restriction of bank note issue to notes of $4 and upwards, the redemption by banks of their own notes at any of their offices, the limitation of dividends until a reasonably large reserve fund had been accumulated, the holding of Dominion notes to the extent of at least one-third of the cash reserve, the prohibition of a bank lending money on its own stock; the forfeiture of the charter of any bank which left any of its liabilities unpaid for 90 days; also, in order that the double liability might be effectively enforced, banks were required to transmit certified lists of shareholders to the Minister of Finance. The charters were granted for ten years only, so as to facilitate the contemplated decennial revisions of the Act.

The first revision of the Bank Act took place in 1881. The noteholder was now recognized as prior creditor, the banks were prohibited from issuing notes under $5, while notes of higher denomination were to be multiples of this sum, Dominion notes were to constitute not less than 40 p.c. of the banks' cash reserve and banks were upon request to pay in Dominion notes sums not exceeding $50.

At the second revision of the Bank Act (1891) the chief change was the establishment of the Bank Note Circulation Redemption Fund, founded as a consequence of the losses to which the noteholders of insolvent banks were still subjected through being unable to turn their notes into cash. It was provided that bank notes should bear interest from the day of suspension of the bank until the date when their redemption is undertaken either by the liquidator, or if he does not do so within two months, the Minister of Finance may redeem them out of the Bank Note Circulation Redemption Fund, which,

if not recompensed for its expenditure out of the assets of the failed bank, must be reimbursed by contributions from the other banks *pro rata* to circulation.

At the third regular revision of the Bank Act in 1901 the Canadian Bankers' Association was given authority to appoint an Inspector to supervise the bank note circulation and see that no bank issued circulation in excess of its paid-up capital. In 1908 provision was made for emergency circulation during the crop-raising season from October to January, during which banks were allowed to issue excess circulation up to 15 p.c. of their combined paid-up capital and reserve or rest fund, this emergency circulation to be taxed at the rate of 5 p.c. per annum. In 1912 the period during which emergency circulation might be issued was extended to the six months from September to February inclusive.

At the fourth revision, which took place in 1913, the Bank Act was amended by providing for the establishment of central gold reserves in which banks might deposit gold or Dominion notes and issue additional notes of their own against such deposit. A shareholders' audit was also provided for. As a consequence of the war the provision for emergency circulation was extended to cover the whole year in 1914, while banks were authorized to make payments in their notes instead of in gold or Dominion notes.

Chartered Banks in Canada.—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same, 36 in 1881 and 1891 and 34 in 1901, but during the present century there has been in banking as in industry an era of amalgamations, the number of chartered banks being reduced to 25 in 1913 and 17 in 1922. That this has been far from involving a curtailment of banking facilities is shown by Table **44,** which shows the development of the banking business since 1868, and by Table **45,** which compares the number of branch banks existing in Canada at different periods, showing a growth from 123 at Confederation to 4,659 as at December 31, 1921, besides 206 branches in other countries. Table **47** gives the number of branches of the various banks by provinces as at December 31, 1921, while Table **46** contains the statistics of branches of Canadian banks doing business outside of Canada, an extension of Canadian banking (more especially to Newfoundland and the West Indies) which has proceeded very rapidly in recent years.[1] Table **48** shows that the

[1] The statistics of Tables 45, 46 and 47 have been furnished by the Canadian Bankers' Association.

total assets of the chartered banks at December 31, 1921, were $2,746,732,605, as compared with $3,056,979,489 in 1920. The total liabilities to the public were $2,472,350,424, as compared with $2,778,308,547 in 1920. Deposits by the public in Canada were $1,781,749,790 at December 31, 1921 (Table **50**), as compared with $1,950,504,230 in 1920. All these declines were due to the continuance of deflation during the year. On March 31, 1921, the total at the credit of the depositors in the Post Office and Dominion Government Savings Banks was $39,160,808, as compared with $42,334,-812 in 1920 (Table **61**).

Bank Reserves.—The Bank Act contains no specific provisions as to the amount of gold to be held either against note circulation or the general business of the bank. It requires, however, that 40 p.c. of whatever reserve a bank finds expedient to carry shall be in Dominion notes. A second provision instructs the Minister of Finance to arrange for the delivery of Dominion notes to any bank in exchange for specie. Thus the gold reserve against Dominion notes, to the extent that the notes are held by the banks, is reserve against banking operations, the Dominion Government being the custodian of the gold for the banks. The other gold element in bank reserves is specie in hand. The sum of the two constitutes the gold basis of the Canadian banking system. In addition to the reserves above mentioned, the Canadian banks carry three other kinds of asset which are regarded as reserves, being funds more or less immediately available for the liquidation of liabilities. These are (1) cash balances in banks outside of Canada; (2) call and short loans in New York; and (3) easily marketable securities. These are shown together with the total and net liabilities in Table **56.** In Table **57** the ratio to net liabilities of each element of the reserve is shown.

Deposits and Loans and Discounts.—The above are the foundations upon which the banking credit of Canada rests. The expansion of that credit is shown by the figures of deposits and loans and discounts in Tables **51** and **52.** The deposits payable on demand, with those payable after notice or on a fixed day (Table **51**) are probably a good index of the deposits which are subject to cheque, and which therefore constitute the basis of credit as circulating medium, for although notice is required by law before the greater part of these deposits can be withdrawn this right is seldom or never claimed, and even savings accounts are chequed against to a considerable extent.

1921	10·7	3·1	7·2	15·4	36·4

NOTE.—The statistics in this table are based upon the averages of the monthly returns in each year.

Government and Other Savings Banks.—There are two classes of Dominion Government Savings Banks in Canada, the Postal Savings Banks under the Post Office Department and the Dominion Government Savings Banks attached to the Department of Finance. The former, established under the Post Office Act of 1867, (31 Vict., c. 10) in order "to enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him, together with the interest due thereon." On Mar. 31, 1921, the number of offices authorized to transact business was 1,328, and the number of savings accounts was 88,563. Statistics of deposits are given in Table **59**. The Government Savings Banks proper, under the management of the Finance Department, are established in the leading cities of Canada under the management of the Assistant Receiver General, and in other places in the provinces of Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. Statistics of their deposits are given in Table **60**, and for the two systems combined in Table **61**.

Other Savings Banks.—The Montreal City and District Savings Bank, founded in 1846, and now operating under a charter granted in 1871, had over 100,000 depositors in 1920 with a capital on December 31, 1920, of $1,498,570, reserve fund $1,350,000, a balance on profit and loss account of $323,449 (total $3,172,019) and deposits of $45,448,299. The Caisse d'Economie de Notre Dame de Quebec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by act of the Canadian Legislature in 1855 and given a

Dominion charter by 34 Victoria, c. 7, had on May 31, 1921, deposits of $11,148,182 with a total shareholders' investment of $1,975,412. Historical statistics of savings bank deposits are given in Table 58.

The co-operative people's banks of Quebec province are also an important element in promoting thrift and assisting business in that province, the loans granted in 1920 being $4,272,585 as compared with $3,667,004 in 1919, $2,623,096 in 1918 and $2,306,172 in 1917.

58.—Deposits with Government and Other Savings Banks, as at June 30, 1868-1936, and March 31, 1907-1922.

LOAN AND TRUST COMPANIES.

Loan and Trust Companies.—Up to and including the year 1913 tables were given in the Year Book of the assets and liabilities, with comparative figures for a series of years, of loan companies and building societies. These tables were taken from the "Annual Report of the Affairs of Building Societies, Loan and Trust Companies in the Dominion of Canada," as issued by the Department of Finance. The statistics in this Report were compiled by the Department of Finance partly from the statements required to be furnished under legislation of the Dominion Parliament and partly from returns voluntarily made by corporations operating under provincial charters. The laws relating to loan and trust companies incorporated by Acts of the Parliament of Canada were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), and since the passing of these Acts the Annual Report issued by the Department of Finance up to and including the year 1913 has been replaced by

"Annual Statements of the Loan and Trust Companies incorporated by Acts of the Parliament of Canada." Tables **62** and **63** show therefore the liabilities and assets of the loan and trust companies as compiled from the statements furnished to the Department of Insurance. They relate to 14 loan and 16 trust companies, and do not include companies or societies operating under provincial charters. Under Chapters 14 and 21 of the Statutes of 1920 (10-11 Geo. V, chaps. 14 and 21) a systematic annual inspection of the affairs of these companies is being made by the Department of Insurance.

62.—Liabilities and Assets of Loan Companies, 1914-1921.

[1]For the years 1914 to 1919 the figures for this column are not distinguished in the official returns from the figures for guaranteed funds shown in the preceding columns.

COMMERCIAL FAILURES.

Commercial Failures in Canada, 1921.—According to Bradstreet's of January 7, 1922, the total number of Canadian failures reported during the calendar year 1921 was 2,358, with liabilities of $48,678,095 in 1921, as against 966, with liabilities of $20,808,053 in 1920. In number there was an increase in 1921 of 144·1 p.c. as compared with 1920, while the liabilities increased by over 133·9 p.c. Dun's Bulletin of the same date gives the total number of Canadian insolvencies in 1921 as 2,451, as compared with 1,078 in 1920, whilst liabilities reached in 1921 the total of $73,299,111, as compared with $26,494,301 in 1920. Tables **64** and **66** give the statistics from both authorities, those from Bradstreet's (Table **64**) being classified by provinces for the calendar years 1920 and 1921 and those for Dun's Bulletin, including Newfoundland, being classified by branches of business for the calendar years 1919 to 1921 (Table **65**) and by classes and provinces for the calendar year 1921 with totals for the years 1908 to 1920, including Newfoundland (Table **66**). An analysis by cause of the failures for 1920 and 1921 is given in Table **67** (Bradstreet's).

Analysis of Commercial Failures.—In Tables 68 and 69 Bradstreet's and Dun's records of commercial failures are analysed by Kemmerer's method. First the total of concerns failing is stated as a percentage of those in business and this percentage is then stated as an index number with 1900 as a base year. Then the assets and liabilities are stated, with the average liabilities per failure, since failures are more disastrous in proportion as the liabilities are larger. Next, the average liabilities per failure are stated as an index number, with 1900 as the base year. The percentage of liabilities to assets is also given, and finally the index number indicating the proportion of failures to the number of concerns in business and the index number indicating the size of the liabilities are averaged, and the result is given as the barometer of business depression. This number reversed, i.e., subtracted from 200, is given as a barometer of business confidence. The records of Bradstreet and Dun are not on the same basis, but the general tendency of the two records is the same.

GOVERNMENT ANNUITIES.

During the early years of the 20th century, there took place throughout the civilized world a distinct movement in favour of ameliorating the living conditions of the less well off members of society. One form which this movement took in the United Kingdom was that of old age pensions granted by the State as a free gift to its poorer citizens, whose earnings were very generally insufficient to permit of a margin of saving. In Canada, where wages were higher and a margin of saving consequently existed, the movement took the form of providing through the establishment of Government annuities, an absolutely safe investment for such savings, which had only too often been lost through the inexperience of their owners, leaving the latter a burden upon the charity of relatives or of the public.

Under the Government Annuities Act, 1908 (7-8 Edw. VII, c. 5), as amended by the Act of 1920, His Majesty the King, represented by the Minister (at present the Postmaster General), may sell to persons domiciled or resident in Canada over the age of five years immediate or deferred annuities of not less than $50 nor more than $5,000 (1) for the life of the annuitant; (2) for a term of years certain, not exceeding twenty years, or for the life of the annuitant, whichever period shall be the longer; and (3) an immediate or deferred annuity to any two persons domiciled in Canada during their joint lives, and with or without continuation to the survivor. The property and interest of any annuitant in any contract for an annuity is neither transferable nor attachable. The purchaser may contract that, in the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid shall be refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c., compounded yearly.

Statistics of the annuities in force on March 31, 1921, are given in Tables **70-71.** From September 1, 1908, to March 31, 1921, 5,031 annuities have been issued, of which 356 have been cancelled on account of death, leaving on March 31, 1921, 1,068 immediate annuities and 3,605 deferred annuities, a total of 4,675 contracts in force. The total value of these annuities on that date was $1,134,779.80, and the amount received for annuities purchased was $4,912,145.67.

INSURANCE.

Insurance companies which transact business throughout the Dominion of Canada, are licensed by the Dominion Government under Acts administered by the Department of Insurance, under the Minister of Finance, while other insurance companies, doing business only in one province, or, by arrangement, in more provinces than one, are licensed by Provincial Governments. The statistics here published are in the main those of companies doing business under license from the Dominion Government and are divided into three classes relating to (1) insurance against fire, (2) life insurance, and (3) insurance of a miscellaneous character, covering risks of accident, guarantee, employers' liability, sickness, burglary, hail, steam boilers, tornado, weather, inland transportation, automobiles, sprinkler leakage, live stock and title. These statistics refer in all cases to the calendar year and are compiled from the Report of the Insurance Department.

Since 1915 the Department of Insurance has endeavoured to collect from the available sources the statistics of the business transacted by companies holding licenses from the Provincial Governments of Canada, or permitted by the laws of the provinces to transact business without a license. The business of the provincial licensees is divisible into three classes (1) business transacted by provincially incorporated companies within the province by which they are incorporated, (2) business transacted by provincially incorporated companies in provinces other than those by which they are incorporated, and (3) business transacted by British and foreign companies licensed by the Provincial Governments. Further, under section 129 of the Insurance Act of 1917, (7-8 Geo. V, c. 29), fire insurance of property in Canada may be effected, under specified conditions, with companies or associations outside of Canada which are not licensed to transact insurance business in Canada.

Fire Insurance.

Fire Insurance in Canada began with the establishment by British fire insurance companies of agencies, usually situated in the sea ports and operated by local merchants. The oldest existing agency of a British company is that of the Phœnix Fire Office of London, now the Phœnix Assurance Co., Ltd., which first commenced business in Montreal in 1804. On account of the growth of the insurance business of these early British companies, branch offices were established and managers were appointed, charged with directing the companies' affairs throughout Canada.

The Halifax Fire Insurance Co. is the first purely Canadian Company of which any record is obtainable. Founded in 1809 as the Nova Scotia Fire Association, it was chartered in 1819 and operated in the province of Nova Scotia until 1919, when it was granted a Dominion license. Among the other pioneer fire insurance companies still in operation, mention may be made of the following: The Quebec Fire Assurance Co., which commenced business in 1818 and which was largely confined in ownership and operations to Quebec province; the British America Assurance Co., incorporated in 1833, the oldest company in Ontario; the Western Assurance Co., organized in 1851 and after a rapid and steady growth one of the largest companies of its kind on the continent; and two American companies, the Ætna Insurance Co., of Hartford, Conn., and the Hartford Fire Insurance Co., which commenced business in Canada in 1821 and 1836 respectively.

A company desirous of carrying on business throughout Canada must obtain a license from the Dominion Government. If it proposes restricting its operations to one particular province, a license may be had from that province, and it may transact its business within such limits without regard to any general laws of the Dominion relating to insurance. In 1875 an Insurance Department was created as a branch of the Finance Department at Ottawa, under the supervision of an officer known as the "Superintendent of Insurance", whose duties are to see that the laws enacted from time to time by the Canadian Parliament are duly observed by the companies. Some important requirements under these laws are: (1) a deposit of $50, 000 of approved securities with the Government; (2) the appointment of a chief agent with power of attorney from the company; (3) the filing of a statement showing the financial position of the company at the time of its application for a license, and subsequent annual statements of its business. In addition, books of record must be kept at its chief office and be open to the inspection of government officers whose practice is to examine them annually.

The report of the Superintendent of Insurance for the year ended December 31, 1920, shows that at that date there were 152 fire insurance companies doing business in Canada, of which 43 were Canadian, 46 were British and 63 were foreign companies, whereas in 1875, the first year for which authentic records were collected by the Insurance Department, 27 companies operated in Canada, 11 Canadian, 13 British and 3 American. The proportionate increase in the number

of British and foreign companies from 59 to 72 per cent of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

The growth of business as shown by the amount of business in force and premiums received yearly has been a steady one, the year 1920 showing a specially large increase (26.31 p.c.). A corresponding decline in the rate of losses paid to premiums received may be noticed, the figures indicating that the companies suffered particularly heavy losses in 1877 and 1904, owing to the great fires in St. John and Toronto respectively.

Although in its early days the Dominion did not prove a very lucrative field for fire insurance companies, of late the great advance in building construction and the wide use of improved fire appliances and safety devices materially reduce the danger of serious conflagrations and place the risks assumed by companies in Canada on an equality with those of other countries.

A feature of the fire insurance business during 1920, besides the unusual increase in premiums received, is the continued increase in the number of companies licensed which are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policy holders, are making themselves felt as competitive factors in the fire insurance business.

Statistics of Fire Insurance.—The business of fire insurance was carried on in Canada in 1920 by 152 companies licensed by the Dominion Government, as compared with 134 companies in the preceding year. Of these companies, 43 were Canadian, 46 British and 63 foreign. The gross amount of fire insurance policies, new and renewed, taken during the year 1920, was $6,790,670,610, as compared with $5,423,569,961 in the preceding year. The net cash received for premiums was $50,527,937, and the net cash paid for losses was $21,954,283, or 43.45 p.c. of the premiums. The net amount in force with Dominion companies on December 31, 1920, was $5,969,872,278. The net amount in force with provincial companies on the same date was $1,054,105,011, making a grand total of $7,023,977,289 in force at the end of 1920. In addition, policies amounting to $483,758,441 were effected by companies, associations or underwriters not licensed to transact business in Canada.

Historical statistics showing the growth of fire insurance with Dominion companies are given in Tables **73** to **75**, while Table **72** contains the statistics of the business transacted by Canadian, British and foreign companies, respectively, during the year 1920. Tables **76**, **77** and **78**, furnish statistics of assets, liabilities and cash income and expenditure of British ,Canadian and foreign companies doing fire insurance, or fire insurance and other classes of insurance, in Canada for the last five years. The net premiums written and net losses incurred are given by provinces in Table **79**. Finally, the complete statistics of Dominion and Provincial fire insurance are supplied in Table **80** and the amount of insurance effected with unlicensed companies and associations is given in Table **81**, classified by companies, description of property insured, and province in which such property is situated.

Life Insurance.

An Historical Note.[1]

Life Insurance, introduced into Canada by companies from the British Isles and from the United States as a fairly well developed institution, and adopted almost as early in its then form by a native company, can hardly be said to have a distinctive Canadian history. The technique and practice show distinctly the effect of both British and United States influences. Among the first companies to transact life insurance in Canada may be mentioned; Scottish Amicable (1846), Standard (1847), Canada (1847), Ætna (1850), Liverpool and London and Globe (1851), Royal (1851). The late 60's and early 70's were stirring years in life insurance the world over. In England, statutes were passed in 1870, '71 and '72 embodying principles—"Freedom and Publicity"—which have, without any fundamental change, since governed in life insurance; and in the year 1909 these same principles were extended and adapted to four kinds of insurance. In Canada no less than fourteen companies began business in this period, including four native companies, namely, Sun (incorporated 1865, began business 1871), Mutual of Canada (Ontario Mutual, 1870), Confederation (1871), London (1874). By 1875 there were at least twenty-six companies, possibly several more, competing for the available business in Canada, as against forty-four companies licensed by the Dominion, and a few provincial companies, in 1921. A comparison of the first and last lines in Table (**79**) is of interest in this connection.

The first Federal Insurance Act was passed in 1868. It prohibited the transaction of insurance business by any company (except companies under provincial authority transacting business within the province) not licensed by the Minister of Finance. A deposit of $50,000 was required. The main provisions of this Act are traceable in the insurance legislation of the present day. Acts were passed in 1871, 1874, 1875 (consolidation, Fire and Inland Marine; provision for appointment of Superintendent of Insurance under Minister of Finance); 1875 (extending powers of Superintendent to Life and other companies); 1877 (consolidating the laws in respect of insurance; quinquennial valuation by Superintendent); 1885 (dealing with commercial insurance companies transacting business on the so-called co-operative or mutual plan, being what is known as assessment companies, fraternal societies excluded); 1886 (consolidation); 1894 (life insurance in combination with any other insurance business forbidden; issue of annuities and endowment assurances by assessment companies prohibited, and new assessment companies required to procure at least 500 applications for membership before license); 1895 (exempting certain fraternal organizations—hazardous occupations—granting life, accident, sickness or disability insurance to members from application of Insurance Act); 1895 (certain amendments as to foreign companies); 1899 (valuation standard change to Hm3½% applicable to business subsequent to January 1, 1900; all earlier

[1] Contributed by Mr. A. D. Watson, Actuary, Department of Insurance, Ottawa.

business to be brought up to Hm4% standard by 1910, and Hm3½% by 1915); 1906 (consolidation); 1910 (including many new provisions and restrictions to some extent in harmony with the recommendations of the Royal Commission on Insurance, 1906); 1917 (largely a new alignment necessitated by the Privy Council decision, 1915, in reference to Sections 4 and 70 of the 1910 Act); 1919 (amendment affecting friendly societies).

The legislation, briefly reviewed above, shows traces of the influence of British and United States legislation. In many respects it may be said to be mid-way between the "freedom and publicity" legislation of England and the inquisitorial and restrictive legislation of the United States. Following the disclosures of the "Armstrong" investigation in New York, a Royal Commission was appointed in 1906 to inquire into the conduct of life insurance business in Canada; and, under the same technical adviser as the "Armstrong Committee", the recommendations of the Commission were in the main the same as of that committee. The legislation, however, passed as a result of the investigation did not embody many of the recommendations of the Commission. At the same time there is possibly a somewhat closer analogy between the Acts of 1910 and 1917 and certain United States statutes passed in recent years than obtained at an earlier period.

The development of life insurance in Canada, as in other English speaking countries at least, has been marked by an increased service to the individual policyholder. Under the stress of competition, companies more and more seek to bring the benefits of insurance within the reach of an ever-widening *clientèle*; and the benefits which may now be obtained under a life insurance policy are calculated to meet the needs of the policyholder and of his dependants, whether in event of old age or in event of death or of permanent disability. Policies may be obtained under which, if the policyholder becomes unable to follow any occupation by reason of ill-health or accident, not only do premiums cease but in addition he receives an income under the policy without any reduction in the benefits formerly accruing to the beneficiary at death of the insured.

Within the last few years has been introduced what is known as "Group Insurance", a plan whereby a group of persons, usually employees, are insured by their employer for a uniform amount or an amount otherwise determined by a formula under one policy, generally on the term plan, the employer paying the premium, each employee having the right to obtain an individual policy at ordinary normal rates, without medical examination, on termination of employment. Under the "Group Policy" the expenses are less than if individual policies were issued on each life, and consequently the premiums are lower. The plan is as yet in the development stages, but seems to be filling a want.

Industrial life insurance, that is to say the issue of policies of small amounts at weekly or monthly premiums paid to collectors or agents of the company who call at the home of the insured, is transacted along the same general lines as in other English speaking

countries. The unit premium is 5 cents per week, the sum assured, not the premium, varying with the age at issue of the policy. Children and the aged are alike insured. In some companies the business is written without any medical examination or inspection, other than inspection by the agent who procures the application or in some cases by a salaried official. In some other companies, a single medical examination is required for amounts of over, say, $300, but for smaller amounts applications are accepted from the agent as above, or the applicant may be required to appear before the medical examiner, but is not examined as ordinarily understood. The amount of the individual policy is small and the total amount on any one life under several policies is small. It really provides burial insurance for the poorer industrial classes. By reason of the frequent calls of the collectors and the small amount of each policy a very large proportion of the premiums are absorbed in expenses. The companies concerned have been devoting their energies to devising ways and means of reducing the expense ratio, and with success, thus making possible better returns to policyholders. There are at present two United States, one Australian, and one Canadian company transacting this business in Canada.

Two other phases in the development of life insurance in Canada require notice, namely "assessmentism", as practised for a period by a few companies, and "fraternalism", as practised by friendly societies.

Assessmentism was an attempt to obtain life insurance protection at the lowest possible cost. In its cruder forms the age of the individual insured was ignored, except that entrance was restricted to fairly early life, a uniform, and usually low, assessment being charged. There was provision in the contract for making additional assessments in certain contingencies—excessive deaths, or reduction in funds of the company. It was held that as the means were then at hand for meeting the exigencies of the business at any time, the companies were sound; and they seemed to be sound, even prosperous, to those unable to see beyond the surface of things, so long as a large proportion of the lives assured were at the early ages, say under 40 or 45 where the rates of mortality are low and fairly uniform. But when a considerable proportion of members had passed to the middle and old ages the weaknesses of the system soon began to be disclosed. The "new blood" theory was then developed which, stated in simple terms, meant that enough young lives were to be induced to insure so as to keep the average mortality of the company as a whole at a low rate, thus obviating the necessity for excessive assessments. These young lives, however, in turn grew old and thus the aged become too numerous to be neutralized by "new blood"; assessments became frequent and consequently burdensome; healthy lives, especially the young, soon found they could get insurance much cheaper in ordinary companies and declined to pay the assessments. With their withdrawal, mortality, with no adequate reserves built up to draw upon, soon became unmanageable, and the final *debâcle* was in sight. It is impossible here to follow assessmentism through all its

modifications in practice—merely attempts, perhaps generally honest enough, to bolster up an unsound system. The first of these companies appeared in Canada in 1885 and the last disappeared about 15 years ago. Legislation in respect of these companies required that they should represent the nature of their business correctly to the public and the insured. A deposit of $50,000 was required; death benefits were to be a first charge on all assessments; each policy had to state: "This association is not required by law to maintain the reserve which is required of ordinary life insurance companies"; and the words "Assessment System" were required to be printed on every policy, application, circular, etc.,

Fraternal societies made their appearance in Canada at a very early date. So far as life insurance is concerned, the development is, as in the case of old line life companies, of more recent years. As above noted, they were at first exempt from the provisions of the Dominion Acts applicable to assessment companies. Notwithstanding the exemption, fundamentally, the business and the methods of the two types of institution as respects life insurance were fairly analogous, though the machinery differed. Eventually the provisions of the statutes originally designed for assessment companies were applied to fraternal societies, and continued to apply until the passing of the 1919 Amendment to the Insurance Act.

The fate of friendly societies has been more fortunate than that of assessment companies. Many of them have gone through several readjustments of rates and benefits, and although this has meant loss in membership and a temporary set-back, they are now doing business with due regard for sound principles. The 1919 Amendment requires friendly societies to be valued annually by an actuary and if a deficiency in funds is shown, it must be made good within a reasonable period by an adjustment of rates or benefits. Thus, societies are in no way in the dark as to their actual condition, and if any weakness should be disclosed, the necessary remedy can be applied before anything in the nature of a serious situation arises.

With the passing of the 1919 Amendment, certain United States societies, previously transacting business in Canada under provincial authority, were required to obtain Dominion licenses or discontinue business. Eleven of these societies have so far been licensed. Some of them are not actuarially solvent, but unless they attain solvency by March 31, 1925, they must thereafter discontinue business in Canada.

The progress of life insurance in Canada may be studied from the tables appended.

Life Insurance Statistics.—The business of life insurance was transacted in Canada in 1920 by 44 active Dominion companies, including 25 Canadian, 8 British and 11 foreign companies.

As shown by the historical statistics of Table **82**, the life insurance business in Canada has expanded from very small beginnings, the total life insurance in force in Dominion companies in 1869 being only $35,080,082, while in 1920 it was $2,657,025,493, the amount

per head of the estimated population of Canada having nearly doubled since 1913—an evidence of the general recognition of the fact that in view of the higher prices of commodities, a larger amount of life insurance is necessary for the adequate protection of dependants. Notable also from these historical statistics is the fact that in this field the British companies, which were the leaders in 1869, have fallen far behind the Canadian and the foreign companies.

The total amount of new insurance effected during the year 1920 was $641,778,095, the largest figure on record, while the premiums paid were $90,218,047, as compared with $74,708,509 in 1919. In Table **83** detailed statistics are given of the business of Canadian, British and foreign companies respectively, by companies, in 1920, while Table **84** is a summary showing the business of Canadian, British and foreign companies for the past five years. Table **85** gives the insurance death-rate by classes of companies. Tables **86**, **87** and **88** show respectively the assets, liabilities and cash income and expenditure of Canadian and other life insurance companies for the years 1916 to 1920, and Tables **89** and **90** show the net insurance in force and the premium income for the past six years. Statistics of Dominion fraternal insurance is given in Table **91**, and of Dominion and provincial insurance combined in Table **92**, which shows that on December 31, 1920, the total life insurance in force in Canada was $3,034,524,013.

Life Insurance on the Assessment Plan.—Table **91** gives the statistics of life insurance on the assessment plan, that is, insurance effected through fraternal or friendly societies by assessments on the members thereof and with annual dues to meet expenses. The statistics in this table relate, however, only to the eight Canadian societies reporting to the Insurance Department of the Dominion Government, viz., the Alliance Nationale, the Ancient Order of Foresters, the Artisans Canadiens, the Catholic Mutual Benefit Association, the Commercial Travellers' Mutual Benefit Society, the Independent Order of Foresters (whose statistics include sick and funeral departments), the Royal Guardians and the Woodmen of the World.

Under an amendment to the Insurance Act which became effective January 1, 1920, it became necessary for all foreign fraternal societies previously transacting business in Canada under provincial licenses to obtain licenses under the Insurance Act in order to be permitted to continue to issue new insurance in Canada. Ten such societies obtained such licenses; viz. The Ladies' Catholic Benevolent Association, The Maccabees, Royal Arcanum, Woman's Benefit Association of the Maccabees, Catholic Order of Foresters, The Workmen's Circle, Knights of Columbus, Association Canada-Américaine, Western Mutual Life Association and Knights of Pythias, while the Jewish National Workers' Alliance of America has also obtained a license. The aggregate figures of the insurance in force in these societies are given in a foot-note to the Table.

[1]Canadian Fraternal Benefit Societies only.

[2]The figure in the text is the book value; the market value of these assets was $57,052,508 in 1919 and $57,965,864 in 1920.

[3]Independent Order of Foresters, $41,833,439 in 1916, $43,763,143 in 1917, $43,803,952 in 1918 and $44,031,640 in 1919, including a special reserve of $500,000 in 1916, $1,000,000 in 1917, $1,600,000 in 1918, $1,000,000 in 1919 and $1,000,000 in 1920.

[4]As a result of an amendment to the Insurance Act, becoming effective January 1, 1920, it became necessary for all foreign fraternal societies then transacting business in Canada under provincial licenses to obtain licenses under the Insurance Act in order to be permitted to continue to issue new insurance in Canada. Ten societies having $65,700,477 of Canadian insurance in force have complied with this requirement, so that Dominion fraternal insurance in Canada on December 31, 1920, totalled $202,758,305.

92.—Dominion and Provincial Life Insurance in Canada, 1920.

[1]Includes $206,246 received as consideration for annuities.

Miscellaneous Insurance.

Since 1875 the growth of insurance business other than fire or life has been a steady one. The report of the Superintendent of Insurance for the calendar year 1880, shows that the number of companies duly licensed for the transaction of accident, guarantee, plate glass and steam boiler insurance—the only four classes of miscellaneous insurance then transacted— was 5, 3, 1 and 1 respectively. The same report for the year 1920 shows that miscellaneous insurance now includes in Canada, accident, sickness, automobile, burglary, explosion, forgery, guarantee, hail, inland transportation, employers' liability, aviation, plate glass, sprinkler leakage, steam boiler, title, tornado and live stock insurance, etc. Whereas in 1880, 10 companies transacted business of this kind, such insurance is now sold by 120 companies, of which 30 are Canadian, 32 British and 58 foreign. In addition to these there were 7 fraternal orders or societies which in 1920 carried on sickness as well as life insurance.

Accident Insurance.—The first license of this kind was issued to the Travellers Co. of Hartford, Conn., in 1868. The first license to a Canadian Co. was that issued to the Accident Insurance Co. of Canada, which was organized in 1872 and commenced business in 1874. Much accident insurance has also been sold by companies doing primarily a life insurance business.

Automobile Insurance.—This is now one of the most important branches of the miscellaneous class of insurance. Premiums increased from $80,446 in 1910 to $573,604 in 1915, and to $5,164,897 in 1920, with an increase in the number of companies from 7 to 73 during the 10 year period.

Plate Glass Insurance.—Policies were first sold in Canada by the Metropolitan Plate Glass Insurance Co., an American concern which withdrew from Canada during 1882 to avoid business restrictions. The 26 companies operating in Canada in 1920 received premiums of $690,476 and paid claims of $409,393, with unsettled claims of $49,093 outstanding.

Burglary Insurance.—This type of insurance received but slight attention in Canada until 1918. In 1893, however, one company issued burglary policies. A second followed in 1905, and in 1910 five companies were operating, while at the end of 1920, 22 companies were licensed to do burglary business. For 1920 the premium income of all companies amounted to $481,019, and the losses paid amounted to $203,983, with unsettled claims of $67,930 outstanding at the end of the year.

XIII.—ADMINISTRATION.

PARLIAMENTARY REPRESENTATION.

Representation by Provinces.—The four original provinces of the Dominion were Ontario, Quebec, Nova Scotia and New Brunswick, which were given parliamentary representation according to Section 37 of the British North America Act, 1867. By Imperial Orders in Council the provinces of British Columbia and Prince Edward Island were admitted into the Dominion, the former on July 20, 1871, by Order dated May 16, 1871, and the latter on July 1, 1873, by Order dated June 26, 1873. An Act of the Dominion Parliament of May 12, 1870 (33 Vict., c. 3), provided for the formation of the province of Manitoba out of Rupert's Land and the Northwest Territories, so soon as these should be admitted into the Dominion of Canada, which admission was effected by Imperial Order in Council dated June 23, 1870, taking effect on July 15, 1870. In consequence of doubts as to the legal validity of the Dominion Act of 1870 (33 Vict., c. 3), the Imperial Parliament passed an Act in 1871 (34–35 Vict., c. 28), making the Canadian Act valid and effectual.

Parliament of Canada.—The Parliament of the Dominion of Canada consists of the Senate with 96 members and of the House of Commons with 235 members, senators being appointed for life by the Governor General and members of the House of Commons being elected by the people. The ordinary legal limit of duration for each parliament is five years, but by Act of the Imperial Parliament (6–7 Geo. V., c. 19), passed June 1, 1916, and intituled an Act to amend the British North America Act, 1867, the duration of the 12th Parliament of Canada was extended until October 7, 1917. The 12th Parliament was dissolved by proclamation of the Governor General on October 6, 1917, and the 13th Parliament of Canada was elected on December 17, 1917. A Redistribution Act passed after each census readjusts the number of representatives in the House of Commons in accordance with rules laid down in Section 51 of the British North America Act, 1867, of the Imperial Parliament (30–31 Vict., c. 3). These rules provide that the province of Quebec shall always have a fixed number of 65 members, and that there shall be assigned to each of the other provinces such a number of members as will bear the same proportion to the number of its population (ascertained by the census) as the number 65 bears to the population of Quebec. However, by an amendment to the British North America Act passed by the Imperial Parliament in 1915 (5–6 Geo. V., c. 45), it was enacted that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province." As a consequence of this amendment the representation of Prince Edward Island has remained at 4 members.

The Senate.—The numerical representation of the Senate by provinces is as follows: Prince Edward Island 4, Nova Scotia 10, New Brunswick 10, Quebec 24, Ontario 24, Manitoba 6, Saskatchewan 6, Alberta 6, British Columbia 6. Total 96.

House of Commons.—The representation of the people in the House of Commons has been governed by Acts of the Dominion Parliament passed in 1903, 1904, and 1907 (3 Edw. VII, c. 60; 4 Edw. VII, c. 35; 6–7 Edw. VII, c. 41). The provinces of Saskatchewan and Alberta were created by Acts of the Dominion Parliament passed in 1905 (4–5 Edw. VII, cc. 3 and 42), and after the Northwest Census of 1906 the Representation Act was amended by an Act of April 27, 1907 (7 Edw. VII, c. 41), which gave Saskatchewan ten members and Alberta seven members after the next ensuing election of October 26, 1908. The seven additional members thus given to Saskatchewan and Alberta brought the representation of Canada in the House of Commons up to 221. The Representation Act, 1914 (4–5 Geo. V., c. 51), which was assented to on June 12, 1914, came into operation for the election of the 13th Parliament of Canada. An amending Act (5 Geo. V., c. 19), and the Imperial Act (5–6 Geo. V., c. 45), provide that the House of Commons shall consist of 235 members, distributed by provinces as follows: Prince Edward Island 4, Nova Scotia 16, New Brunswick 11, Quebec 65, Ontario 82, Manitoba 15, Saskatchewan 16, Alberta 12, British Columbia 13 and Yukon Territory 1. Table 1 shows the representation in the House of Commons according to the districts of the Representation Act, 1914, and of the amending Act (5 Geo. V., c. 19).

[1]Second term.

HONORARY ADVISORY COUNCIL FOR SCIENTIFIC AND INDUSTRIAL RESEARCH.[1]

The Honorary Advisory Council for Scientific and Industrial Research, generally known as the Research Council, was constituted on November 29, 1916, under a Sub-Committee of the Privy Council, formed on June 1 of the same year, to have charge of all measures to foster the scientific development of the industries of Canada. This Sub-Committee consists of the Minister of Trade and Commerce (Chairman), and the Ministers of the Interior, Agriculture, Mines, Customs and Excise and Labour.

The Research Council, the formation of which was given statutory authority by the Research Council Act of 1917 (7–8 Geo. V., c. 20), consists of eleven representatives of the scientific, technical and industrial interests of Canada, one of these being a permanent officer, the Administrative Chairman of the Council. The Council has charge of all matters affecting scientific and industrial research in Canada which are assigned to it by the Sub-Committee and advises the Sub-Committee on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the natural resources of Canada.

[1]A detailed account of the organization of the Research Council was given on pages 619–623 of the 1916-17 Year Book; summaries of its activities appeared on pages 581-584 of the 1918 Year Book and on pages 584-587 of the 1919 Year Book. The 1920 Year Book contained on pages 53-57 an outline of its organization and activities since its commencement.

The Council meets at least four times a year in Ottawa, and in order to economize its time, has appointed from its membership a number of standing and special committees to deal with particular problems; further, in order to have expert advice along technical lines, it has appointed twelve associate and advising committees of Canadian scientists, technologists and business men, whose advice on their specialties is available without remuneration as required. Nor do the members of the Research Council receive for their services any other remuneration than their expenses.

Research is impossible without trained "researchers." Consequently, to increase the number of scientific investigators in Canadian industries, the Council has established Fellowships, Studentships and Bursaries, having an annual value of $2,200, $1,000 and $750 respectively, which may be awarded to graduates of universities and technical colleges who have given evidence of the possession of the special knowledge and capacity required to conduct independent research in some department of science bearing on industrial processes. During the fiscal year 1921-22, seven Fellowships, fourteen Studentships and thirty-five Bursaries were awarded.

During the year 1921-22 many applications for financial assistance in aid of special researches were received, which were carefully examined and a number approved and the assistance granted. Among these may be mentioned a grant to Professor Wilfred Sadler to complete an investigation for determining the character of the bacteria and other germs found in cream, milk and butter. The studies made reveal much on the bacterial flora of graded butter, suggest the importance of water supply as a possible agency of contamination, emphasize the possibility of bacterial recontamination subsequent to pasteurization, indicate the necessity for bacterial control in the management of cream and the manufacture of butter, and define cases where specific deterioration of grade has been eliminated or rendered less acute by putting into practice the advice tendered as a result of the laboratory findings.

To ascertain the possibility of cultivating economically in British Columbia several essential oil and drug-yielding plants, a grant was made to Professors R. H. Clark and J. Davidson of the University of British Columbia. The investigations made indicate that the results of storing the bark of Cascara Sagrada for three years previous to use can be produced quickly by chemical means, and tests made at the Vancouver General Hospital with bark so treated have been satisfactory. The Cascara Sagrada wood was next examined to see if it contained enough active constituent to pay for extraction. Preliminary results in this connection indicate that the wood is practically as active as the bark. This result, if fully confirmed, will mean the conservation of the fast disappearing cascara tree.

A grant was made to Professor J. C. McLennan, Director of the Physics Laboratory of the University of Toronto, to continue his investigations regarding the relations of the infra red rays to the structure of atoms. A special study has been made of the ionization

of the atoms of mercury. Information has been secured which is very useful in connection with the problem of determining the energy required to be expended in disrupting atoms and releasing atomic energy.

A grant to assist in a study of the gap in ether rays between ultra-violet light and X-rays was awarded to Professor A. L. Hughes of Queen's University. Radiation of wave length between that of the softest X-rays and that of the most extreme ultra-violet light undoubtedly exists, but hitherto has not been produced; it is the purpose of the investigation to explore this region. There are certain fundamental differences in the method of the production of light and X-rays, and it is important, therefore, to investigate whether or not these differences merge into each other in the unexplored region.

For the purpose of making a thorough study of the cause and treatment of acidity in the soils of Quebec and New Brunswick, a grant was made to Principal F. C. Harrison of Macdonald College. This condition, which is common in the soils of eastern North America, interferes seriously with the growth of alfalfa, red clover, and, probably, to some extent, with the majority of useful crops.

Professor H. E. T. Haultain of the University of Toronto received a grant to continue a research carried on during the past two years in an attempt to analyse the paths of balls in ore crushing tube mills by means of photography. Some 500 photographs were taken and a definite advance was made.

To investigate the causes of soil corrosion of iron piping and other iron structures in Canada, a grant was made to Professor John W. Shipley, University of Manitoba. This corrosion, which causes a very large annual loss in these provinces, is due to the action of soil waters, but the chemical reaction concerned must be ascertained before methods of treatment of the iron used in such structures can be found to prevent such corrosion. Professor Shipley has been engaged on this problem for more than a year and from the results he obtained, is confident that the causes of the corrosion can be definitely ascertained.

A few years ago the destructive effect of the alkali soil waters of the west on concrete was brought forcibly to the attention of the engineering profession, when structures of great importance and magnitude situated in the prairie provinces, were found to be disintegrating under this destructive agency. A brief survey showed that structures involving millions of dollars were endangered, and that the problem was so serious that certain engineers of standing had decided that until more was known of the action, concrete could not be safely used under conditions where alkali ground water would be encountered. In view of the importance of this problem, the Research Council awarded a considerable grant to a committee of the Engineering Institute of Canada under the chairmanship of Professor C. J. Mackenzie of the University of Saskatchewan, which was formed to investigate this problem. The investigation has been divided into two phases, (a) physical field tests and (b) chemical research.

It is not expected that any results will be available for publication for at least another year, as the field specimens have to be exposed to alkali conditions for that time before an examination is made.

The problem of utilizing the low grade iron ore deposits of Canada is one of the most vitally important questions with which the Dominion is faced. Very few large beds of high grade iron ore have been discovered in Canada, but on the other hand many large deposits of low grade iron ore are known, and a number are in localities comparatively easy of access. These ores, however, must be handled in such a way that they can compete with the high grade iron ores now imported from the United States, from which nearly all the iron which is now produced in Canada is smelted. A sub-committee of the Associate Committee of the Research Council on Mining and Metallurgy has been investigating this problen along two lines. (a) It has carefully studied all printed matter and reports on the deposits of iron ore in Canada, to ascertain whether any of these ore beds require additional study in the field and whether it is advisable to carry on prospecting in any particular portion of the Dominion for the purpose of discovering new ore beds. (b) The committee is arranging for experiments on a commercial scale with certain beneficiated ores now produced in Canada with a view to determining their availability for blast furnace use and also the cost of producing iron from them. They are also arranging to make certain large scale tests to try certain newly discovered methods of beneficiation, which seem specially applicable to certain classes of iron ore. These investigations are not yet sufficiently advanced to enable a definite statement to be made as to the results.

Many other investigations have been carried on under the auspices of the Research Council during 1921-1922.

Proposed National Research Institute—

The Research Council in 1917 recommended the establishment of a National Research Institute in Canada and a special committee of the House of Commons concurred in this recommendation, pointing out that similar institutions existed in Great Britain, Germany, the United States and Australia, while France, Italy, Japan and New Zealand were taking measures to organize research institutes. As a consequence a bill providing for the establishment of a National Research Institute was passed by the House of Commons in the spring of 1921, but was rejected by the Senate.

PUBLIC LANDS.

Dominion Lands.—The Crown Lands of the Dominion of Canada are situated (a) in the Prairie Provinces (Manitoba, Saskatchewan and Alberta), (b) in a belt of twenty miles on either side of the main line of the Canadian Pacific Railway, known as the Dominion Railway Belt of British Columbia, and (c) in a block in northern British Columbia, containing 3,500,000 acres, known as

the "Peace River Block." Every person who is the sole head of a family and every male who has attained the age of eighteen years and is a British subject, or declares intention to become a British subject, is entitled to apply for entry for a homestead. The lands are laid out in townships of 36 sections. Each section contains 640 acres and is divided into quarter-sections of 160 acres. A quarter section of 160 acres may be obtained as a homestead on payment of an entry fee of $10 and fulfilment of certain conditions of residence and cultivation. To qualify for the issue of the patent a settler must have resided upon his homestead for at least six months in each of three years, must have erected a habitable house thereon, and must have at least 30 acres of his holding broken, of which 20 acres must be cropped. A reduction may be made in the area of breaking where the land is difficult to cultivate on account of scrub or stone. Provision is made for residence in the vicinity on certain conditions, in which case the area of cultivation must be increased.

Disposal of Dominion Lands in Manitoba, Saskatchewan and Alberta.—According to figures supplied by the Department of the Interior, a total of 123,628,182 acres, equal to 5,366 townships, or 193,169 square miles, has been alienated from the Crown. The total number of acres surveyed to 1st January, 1921, was 200,280,209, of which 25,649,800 were available for homestead entry. Table **6** shows the distribution of the surveyed area for each of the three Prairie Provinces as at January 1, 1921.

In addition to the surveyed area there are large tracts of land in the northern parts of these provinces which have as yet been explored only in a very partial way. The total area of this unsurveyed tract is 285,362,489 acres, of which 22,384,720 acres are water covered. Reports on the resources and developments of Manitoba, Saskatchewan and Alberta have been issued by the Natural Resources Intelligence Branch of the Department of the Interior, some of which are as follows: The New Mining District of Manitoba, The Peace River District of Alberta, Oil and Gas in Western Canada, A description of the resources and possibilities of the province of Saskatchewan, and statistical compilations on the Natural Resources of Manitoba, Saskatchewan and Alberta, Athabaska to the Bay. Similar reports have been issued with regard to other parts of Canada such as: Natural Resources of Nova Scotia, The Province of New Brunswick, and Central British Columbia. With the object of assisting in the settlement and development of the idle lands in Canada, this Branch also publishes lists of unoccupied lands in the Prairie and Maritime Provinces, giving a short description of the properties, the prices and terms and the owners' names and addresses, thus affording prospective purchasers an easy means of getting in touch with those who are not cultivating their lands and affording them an opportunity of selecting lands suitable to their means and requirements.

6.—Distribution of the Surveyed Areas in Manitoba, Saskatchewan and Alberta, January 1, 1921.

Description.	Manitoba.	Saskatchewan.	Alberta.	Total.
	acres.	acres.	acres.	acres.
Homesteads (including military homesteads)	8,367,000	27,478,600	18,268,300	54,113,900
Pre-emption and Purchased Homesteads (1st Sept., 1908, to 20th Mar., 1918)	–	5,518,200	2,664,300	8,182,500
Half-Breed Script, Sales, Special grants, etc	5,094,700	2,316,800	1,240,800	8,652,300
Granted to Railway Companies	3,566,997	15,177,063	13,120,014	31,864,074
Granted to Hudson's Bay Company	1,196,700	3,183,200	2,175,600	6,555,500
School Land Endowment (1-18 of area surveyed in sections)	1,630,600	3,941,900	3,751,600	9,324,100
Sold under Irrigation System	–	76,832	980,850	1,057,682
Under Timber Licenses[1]	909,800	1,071,000	1,304,000	3,284,800
Under Grazing Leases[1]	140,600	3,021,600	2,908,200	6,070,400
Forest Reserves and Parks[1]	2,386,700	5,953,700	16,754,000	25,094,400
Reserved for Forestry Purposes (inside surveyed tract)[1]	746,300	1,430,000	1,677,500	3,853,800
Road Allowances[1]	974,700	1,467,400	1,285,900	3,728,000
Parish and River lots	505,211	84,010	118,564	707,785
Indian Reserves	433,860	1,070,949	1,367,974	2,872,783
Indian Reserves surrendered	87,560	410,297	302,228	800,085
Water-covered lands (inside surveyed tract)[1]	4,255,500	1,911,100	2,301,700	8,468,300
Now available for entry	5,275,900	4,912,900	15,461,000	25,649,800

[1]Area not available for cultivation.

Railway Lands.—Table 7 is a record for the three fiscal years 1919, 1920, 1921 of the sales of lands by the Hudson's Bay Company and by railway companies having government land grants. The total sales in the fiscal year 1921 (the year ended March 31, 1921), amounted to 553,630 acres at a price of $10,860,756, as compared with 1,026,157 acres at a price of $19,188,225 in the previous fiscal year. The 1921 prices average $19.61 per acre, as against $18.69 in the preceding year.

7.—Land Sales by Railway Companies having Government Land Grants, and by the Hudson's Bay Company, in the Fiscal Years 1919-1921.

Companies.	1919.		1920.		1921.	
	Acres.	Amount.	Acres.	Amount.	Acres.	Amount.
		$		$		$
Hudson's Bay Company	285,561	4,978,950	276,629	4,724,941	178,301	3,037,369
Canadian Pacific Railway	602,555	10,580,669	571,571	11,356,146	275,636	5,898,994
Manitoba Southwestern Colonization Railway	5,289	67,214	4,623	56,760	1,518	20,058

Great Northwest Central Railway Company	14,530	252,774	27,981	464,586	5,128	96,616
Total	**1,038,657**	**18,148,736**	**1,026,157**	**19,188,225**	**553,630**	**10,860,756**

Homestead Entries.—In the calendar year 1921 the total number of ordinary homestead entries for lands of the Dominion Government was 7,346, as compared with 5,435 in 1920, 6,623 in 1919, 4,378 in 1918, 8,768 in 1917, 12,568 in 1916, 17,532 in 1915,

and 25,623 in 1914. In 1921, 1,477 entries were made in Manitoba, as against 795 in 1920, 1,209 in 1919, 873 in 1918, 1,618 in 1917, 2,616 in 1916, 4,113 in 1915 and 4,252 in 1914; 2,729 in Saskatchewan against 1,726 in 1920, 1,840 in 1919, 1,273 in 1918, 2,957 in 1917, 4,519 in 1916, 6,349 in 1915, and 9,752 in 1914; 2,936 in Alberta, against 2,794 in 1920, 3,464 in 1919, 2,163 in 1918, 3,982 in 1917, 5,169 in 1916, 6,584 in 1915 and 10,722 in 1914; and 204 in British Columbia against 120 in 1920, 110 in 1919, 69 in 1918, 211 in 1917, 264 in 1916, 486 in 1915 and 847 in 1914.

Pre-emptions.— The privilege of making pre-emptions or purchased homestead entries was withdrawn by Order in Council, from 20th March, 1918, confirmed by chapter 19 of the Statutes of 1918, assented to May 24, 1918.

Provincial Public Lands.—In the Maritime Provinces, in Quebec, Ontario, and British Columbia, the public lands are administered by the Provincial Governments. In Prince Edward Island all the land is settled.

Nova Scotia.—In *Nova Scotia* there are no free grants of land; but, under conditions prescribed by the Crown Lands Act of the Provincial Assembly (10 Edw. VII, 1910, c. 4, s. 26), and an amending Act of May 3, 1912, Crown lands, not exceeding in each case 150 acres, may be granted for agricultural or grazing purposes to applicants of not less than 18 years of age at the price of $1 per acre in addition to the expenses of survey. Leases and grants of Crown lands may also be obtained upon conditions prescribed. The total area of the Crown lands in Nova Scotia is approximately 808,329 acres.

New Brunswick.—The area of New Brunswick is about 17,143,000 acres. Of this the Crown holds about 7,500,000 acres, most of which is timber land. The province is essentially a wooded country and will in all probability always derive a large part of its revenue from lumbering industries. Practically all of the Crown timber lands are held by license for the cutting of timber, most of these licenses expiring in the year 1933. While it may be safely said that the bulk of the Crown lands are better suited to lumbering than agriculture, yet there are still some Crown lands well suited to mixed farming which may be taken up by prospective settlers. One hundred acres is the maximum allowed to any one settler, and he is required to reside on his land and cultivate the same for three years before obtaining a grant of same. For some of the best lands $1 per acre is asked from settlers in addition to the settlement duties already referred to. The Crown controls the right to hunt and fish within the Province. Hunting of migratory birds and fishing in tidal waters are, however, under the control of the Dominion Government. With the possible exception of British Columbia and

For copies of the detailed regulations governing the disposal of provincial Crown lands, application should be made as follows: Nova Scotia, to the Secretary for Industries and Immigration, Halifax; New Brunswick, to the Deputy Minister of Lands and Mines, Fredericton; Quebec, to the Deputy Minister of Lands and Forests, Quebec; Ontario, to the Minister of Lands and Forests, Parliament Buildings, Toronto; British Columbia to the Deputy Minister of Lands, Victoria.

the Yukon, New Brunswick is probably the best big game country in Canada, the Crown land in the interior being one vast forest well watered by rivers, streams and lakes.

Quebec.—In Quebec the area of public lands subdivided and unsold on June 30th, 1920, was 7,682,767 acres. During the year ended June 30th, 1921,421,261 acres were surveyed; 100,301 acres reverted to the Crown; 178,626 acres were sold and granted, the receipts including arrears, being $148,041. Adding to the acreage available at June 30th, 1920, the area surveyed and the areas that reverted, and deducting sales and grants, there remained subdivided and unsold on June 30th, 1921, 8,025,703 acres. Agricultural lands in 100-acre lots are available for settlement upon prescribed conditions at the price of 60 cents per acre.

Ontario.—In Ontario the public lands which are open for disposal are chiefly situated in the districts of Muskoka, Parry Sound, Nipissing, Sudbury, Algoma, Timiskaming, Thunder Bay, Kenora and Rainy River, and in the counties of Haliburton, Peterborough, Hastings, Frontenac, Lennox and Addington and Renfrew. In northern Ontario, which comprises the territory lying north and west of the Ottawa and French rivers, the townships open for sale are subdivided into lots of 320 acres, or sections of 640 acres, and a half lot or quarter section of 160 acres is allowed to each applicant at the price of 50 cents per acre, payable one-fourth cash and the balance in three annual instalments with interest at 6 p.c. The applicant must be male (or sole female) head of a family, or a single man over 18 years of age. The conditions of purchase include actual occupation by the purchaser, the erection of a house, the clearance and cultivation of at least 10 p.c. of the area and three years' residence. Proxy regulations enable an individual to purchase a half lot of 160 acres and place an agent in residence, but the duties to be performed before issue of patent are double those required in ordinary purchases.

Free grants are available on lands within the districts of Algoma, Nipissing, Thunder Bay, Sudbury, Rainy River and Kenora, and between the Ottawa river and the Georgian bay, comprising portions of the counties of Renfrew, Frontenac, Addington, Hastings, Peterborough and Haliburton and the districts of Muskoka and Parry Sound. Grants of 160 acres are made to either single or married men in free grant territories where the land is subdivided in sections of 320 acres. In the Huron and Ottawa territory an allowance for waste lands may increase the grant of a single man to an area not exceeding 200 acres, while heads of families may secure 200 acres free and purchase an additional 100 acres at 50 cents an acre. The settlement duties for free grants are as follows: (a) at least 15 acres to be cleared and brought under cultivation, of which 2 acres at least are to be cleared and cultivated annually; (b) a habitable house to be built at least 16 by 20 feet in size; (c) actual and continuous residence upon and cultivation of the land for 3 years after location and thence to the issue of the patent. The mines and minerals and all timber other than pine, are covered by the patent.

Returned soldiers who enlisted and rendered overseas' service with the Canadian Expeditionary Forces are each entitled to an allocation of 160 acres free, in any township regularly open for sale, subject nevertheless to the performance of settlement duties.

Ranching lands of prospective quality may be obtained on reasonable terms in waste and wooded areas, the valley of the Trent river, lying between lake Ontario and the Georgian bay, affording good opportunities for cattle and sheep raising. The maximum annual rental is 5 cents an acre, on easy stocking conditions. Leases may issue on condition that there be regularly maintained on the land such number of head of stock as may be consistent with the resources of the area covered.

Ontario includes 230,000,000 acres of land, of which only 14,500,000 acres are under cultivation. More than 20,000,000 acres of the very finest arable land await the plough. Ontario is $3\frac{1}{2}$ times as large as the British Isles and $1\frac{1}{2}$ times as large as Texas, and almost twice the size of France or Germany. From east to west its borders are 1,000 miles apart, and from north to south, 1,075 miles. Recent railway construction and colonization road building have made accessible vast tracts of untilled farm land and virgin forests in northern Ontario.

Loans are made to settlers in the northern and northwestern districts of Ontario. The maximum amount of any loan to be made to a settler is $500, with interest at 6 p.c. per annum, upon such terms and conditions as the Loan Commissioner may approve. The Government of Ontario is anxious that all *bona fide* settlers shall take full advantage of the opportunity provided to secure any needed loan, and full information with respect to same may be secured on application to the various Crown Lands Agents, or direct from the Settlers' Loan Commissioner, Toronto.

Sites for summer cottages under reasonable terms and conditions may be acquired by lease within the Government parks, including Algonquin Provincial Park, and by purchase in certain other sections of the province. Islands in Timagami are leased without building conditions, but islands elsewhere are sold in 5 acre parcels, subject in each case to the erection of a building costing not less than $500 within 18 months.[1]

British Columbia.—In British Columbia there are large areas of free grant lands. Any British subject being the head of a family, a widow, a *femme sole* who is over 18 years of age and self-supporting, a woman deserted by her husband, or whose husband has not contributed to her support for 2 years, a bachelor over 18 years of age, or any alien on his making a declaration of his intention to become a British subject, may pre-empt free 160 acres of the unoccupied and unreserved surveyed Crown lands, not being an Indian settlement and not carrying more than 8,000 feet per acre of milling timber west of, and 5,000 ft. per acre east of the Cascade Range. Fees payable

[1] Further particulars may be obtained on application to the Minister of Lands and Forests, Parliament Buildings, Toronto, Ont.

include $2 for recording, $2 for certificate of improvement and $10 for Crown grant. Residence and improvement conditions are imposed. After occupation for 5 years and making improvements to value of $10 per acre, including clearing and cultivation of at least 5 acres, the pre-emptor may obtain certificate of improvement and crown grant. The fact that an applicant has previously homesteaded in another province does not preclude him from pre-empting in British Columbia. Unsurveyed lands cannot be pre-empted.

Homesite leases of an area not exceeding 20 acres, surveyed or unsurveyed, for occupation and cultivation can be obtained—this being a provision to enable fishermen, miners or others to obtain homesites—at small rental, under improvement conditions, including building of dwelling in first year, title being procurable after five years' occupation and completion of survey.

Under the Land Act vacant and unreserved Crown lands, surveyed or unsurveyed, can be purchased in quantities not exceeding 640 acres for agricultural purposes, on improvement conditions. The Minister may require improvements to the value of $5 per acre with 4 years of allowance of the sale and Crown grant may be withheld until it is certified that improvements are made. Price of first class (agricultural) lands is $5 per acre; second class (grazing) lands $2.50 an acre.

Crown lands are leased, subject to covenants and agreements deemed advisable, for agricultural or industrial purposes—for hay-cutting, up to 10 years; for other purposes, except timber-cutting, up to 21 years.

The Land Settlement Board has selected a number of land settlement areas contiguous to the Canadian National Railways. Lands within these areas are sold on easy terms for farming purposes, conditional upon development, prices being usually from $3 to $10 an acre, a small cash payment being required and the balance spread over a term of years to suit purchaser. Returned British Columbia soldiers are entitled to abatement of $500 on purchase price. The Board has power to enforce orders on those owning land within an area to improve and to levy a penalty tax for failure; also power to procure compulsory sale of undeveloped land. To established settlers loans are made by the Board for development purposes from $250 to $10,000, not exceeding 60 p.c. of improved value of land offered as security.

Timber-cutting rights are acquired by timber-sale. The applicant locates the timber, and on application being made the area is cruised, surveyed if necessary, and advertised for sale by tender. All particulars are obtainable from the Forest Branch, Department of Lands. Information regarding water-rights, for power, irrigation, etc., can be obtained by addressing the Water Rights Branch, Department of Lands.

The area of land administered by the province is 223,619,650 acres, of which 199,388,733 acres are vacant and unreserved; 4,591,991 acres are included in Indian, park, game, forest and other reserves and 9,094,127 acres in timber, pulp, coal, grazing and other leases or

licenses. The total area of surveys is 32,574,987 acres, including 22,510,903 acres of land surveys, 8,945,119 acres of timber, 652,848 acres of coal lands and 466,117 acres of mineral claims. The area included in cities is 56,270 acres and in district municipalities 888,378 acres. The area of the province is 238,469,600 acres, of which 92,800,000 acres is above timberline, and 91,432,100 acres is forested—39,352,000 acres carrying over 1,000 ft. per acre and 17,281,600 acres from 5,000–30,000 ft. per acre. The area suitable for agriculture is estimated at 22,608,000 acres. On Vancouver island, an area of 2,110,054 acres is included in the Esquimalt and Nanaimo Ry. land grant, embracing the southeastern portion of the island, and applications for lands in this area are made to the land agent of that railway at Victoria.

DEPARTMENT OF THE SECRETARY OF STATE.

The Department of the Secretary of State was constituted in its present form in 1873 through the merging of the previously-existing offices of the Secretaries of State for Canada and for the Provinces. The Secretary of State is the official mouthpiece of the Governor General, as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the two being conducted by him with the Lieutenant-Governor. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, charters, land patents and other instruments issued under the Great Seal. He is further charged with the administration of the Companies Act, the Canada Temperance Act and the Naturalization Act. The following information on these subjects has been secured in the course of administration.

Charters of Incorporation.—The number of companies incorporated under the Companies Act and amending Acts during the fiscal year 1920-21 was 852 (as against 991 in the previous year), with a total capitalization of $752,062,683 (as against $603,210,850 in the previous year). During the year Supplementary Letters Patent were granted to 229 companies, of which 135 increased their capital stock by the aggregate amount of $79,803,000, 17 decreased their capital stock by $7,698,300, the remaining 77 being granted Supplementary Letters Patent for various purposes such as changing names, extending powers, etc. The total capitalization of new companies plus the net increase of capital of existing companies amounted to $824,167,383.

Canada Temperance Act.—Under Parts I and II of this Act provision is made for the prohibition of the sale of intoxicating liquors in counties and cities. During the calendar year 1921 a vote was taken upon the repeal of the Act in the city of Quebec. The repeal was carried by a large majority and became effective from the 22nd October, 1921. The Act was suspended by Order in Council without

the taking of a vote in the County of Peel, Ontario. Part IV of the Act relates to the prohibition of the importation of intoxicating liquors into the provinces. During the calendar year plebiscites were taken under this part in the Provinces of Ontario and New Brunswick and in the Yukon Territory. In all, six provinces have so far voted against the importation of intoxicating liquor.

Naturalizations.—The naturalizations effected under the Naturalization Act (R.S. 1906, c. 77) for the calendar years 1908–1917 inclusive, were given on page 594 of the Year Book for 1919. Since January 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which came into force on January 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. This latter Act is the one now in force. Table **10** shows the principal nationalities granted naturalization under these Acts during the calendar years from 1915 to 1921. It is a noteworthy fact that the number of certificates issued under the above Acts increased from 124 in the year 1915 to 8,773 in 1920 and 11,069 in 1921.

10.—Naturalization in Canada by Principal Nationalities effected under the Naturalization Acts 1914-1920 during the Calendar Years 1915, 1916, 1917, 1918, 1919, 1920 and 1921.

[1] Under Section 4 of the Naturalization Act, 1914, the Secretary of State is authorized in his discretion to grant a special certificate of naturalization to any person with regard to whose nationality as a British subject a doubt exists.

[2] Resumption of British nationality by wife of alien being a subject of state at war with His Majesty.

DEPARTMENT OF INDIAN AFFAIRS.

The Indians of Canada.[1]

Population.—The Indians of Canada number about 100,000, not varying very much from year to year. Their numbers are, however, slowly increasing, and the popular notion that the race is disappearing is not in accordance with facts.

Administration.—Indians are minors under the law, and their affairs are administered by the Department of Indian Affairs under the authority of the Indian Act. This Department is the oldest governmental organization in the Dominion, dating back to the time of the Conquest. It was originally under the military authorities, and did not become a part of the civil administrative machinery until 1845. By section 5 of the British North America Act, 1867, the Indians of Canada and the lands reserved for them came under the control of the Dominion Government, and in 1873 an Act of the Canadian Parliament (R.S., c. 81) provided that the Minister of the Interior should be Superintendent General of Indian Affairs and as such have the control and management of the lands and property of the Indians in Canada. The aim of the Department of Indian Affairs is the advancement of the Indians in the arts of civilization, and agents have been appointed to encourage the Indians under their charge to settle on the reserve and to engage in industrial pursuits.

[1] Contributed by the Department of Indian Affairs.

Reserves have been set aside for the various bands of Indians throughout the Dominion, according to their respective requirements, and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department as guardian of the Indians, include the control of Indian education, health, etc., the development of agriculture and other pursuits among them for their advancement, the administration of their funds and legal transactions and the general supervision of their welfare.

The educational work of the Department is now very extensive. A total of 321 Indian schools are in operation, comprising 247 day, 58 boarding and 16 industrial schools.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are in all 114. The number of bands included in an agency varies from one to more than thirty. The staff of an agency usually includes various officers in addition to the agent, such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised by the Department's inspectors, each inspector having charge of a certain number of agencies. Expenditures upon destitute Indians are made by the Dominion Government, either from public funds or from the tribal funds of the Indians.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised, he ceases to be an Indian under the law, and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in administering this problem, as Indians who become enfranchised lose thereby the special protection attached to their wardship, so that it is necessary to guard against premature enfranchisement.

Linguistic Stock and Tribal Origin.—The separate linguistic stocks that are generally recognized in Canada are Algonkin, Iroquoian, Siouan, Athapascan, Kootenay, Salish, Wakashan, Haida, and Tsimshian. The most numerous stock is the Algonkin, which extends from the Atlantic coast to the Rocky mountains, and includes the Micmacs of the Maritime Provinces, the Hurons and Algonkins, Maliseets and Naskapees of Quebec, the Ojibbewas or Chippewas of Ontario, and the Crees, Bloods, Peigans and Blackfeet of the Western Provinces. Next in strength to the Algonkin stock comes the Iroquoian stock (Six Nations Confederacy), which is not aboriginal to Canada, but migrated from the United States and is settled in Ontario and Quebec. The Athapascan stock covers the northern parts of Alberta, Saskatchewan, the North-West Territories, Yukon and the northern interior of British Columbia.

There are only a few bands of Siouans in Canada. They are found in the Prairie Provinces, and, like the Iroquois, migrated from the United States. With the exception of the Athapascan tribes of

the northern interior above referred to, the Indians of British Columbia appear to be wholly separate races from the other native inhabitants of Canada, their customs, arts and crafts, physical characteristics and temperament bearing no similarity to those of the Indians of the eastern and prairie provinces. The British Columbia Indians are divided into several linguistic stocks, namely, Kootenay, found in the southeastern interior, the Salish, which is the most numerous, in the southwestern part of the province, and the Wakashan or Kwawkiutl-nootka, and Haida and Tsimshian in the northern coastal districts.

Treaties.—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario and the Prairie Provinces, the situation has been different. There the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession, the Crown agreed to set aside adequate reserves, make cash grants, provide per capita annuities, give assistance in agriculture, stock raising, hunting, trapping, etc., as particular circumstances might require, provide education for the Indian children and otherwise safeguard the Indians' interests. These treaties have been made from time to time as occasion arose, and as new territories were opened up. The last treaty to be made, Treaty No. 11, was effected in the summer of 1921, and covered the Mackenzie River district, where it was necessary to protect the Indian interests, owing to the oil rush and consequent rapid settlement of the country. No treaty has been made with the Indians of British Columbia, but their welfare has received no less attention from the Government on that account.

Industries and Occupations.—The industries and occupations of the Indians do not vary greatly from those of the other sections of the community in the localities in which their reserves are respectively situated. In the remoter and more unsettled parts of the country, however, hunting and trapping is still their chief source of livelihood. This, and the manufacture of native wares, may be said to be the only distinctively Indian vocations. A considerable number of Indians have qualified in the professions and those holding degrees are *ipso facto* enfranchised by the Indian Act. Almost every industry, trade and occupation now has its Indian representatives.

Maritime Provinces.—In the Maritime provinces the Indians are variously engaged in the occupations of hunting, fishing, trapping and farming, according to the respective locations of their reserves.

Ontario and Quebec.—Mixed farming is the principal occupation of the Indians in the settled parts of Ontario and Quebec. They have made marked progress in agriculture, especially in Ontario, during the past few years. The Department of Indian Affairs employs

special travelling agricultural representatives who visit the Indians' reserves and schools, giving instruction and advice in order to promote the adoption of modern agricultural methods. This policy has proven most effective. The Indians of Ontario and Quebec still derive considerable income from the manufacture of their native wares, such as baskets, moccasins, snow-shoes, etc. Hunting and trapping is still the principal means of livelihood among the Indians of the northern and more outlying parts of Ontario and Quebec.

Prairie Provinces.—Grain and stock raising are the principal occupations of the Indians of the Prairie provinces. The advancement of these western Indians during the past few years has been notable. When the Government took charge of these Indians after the disappearance of the buffalo, they were in a destitute and helpless condition and had to be rationed. The Department of Indian Affairs inaugurated the policy of instructing the Indians in modern methods of farming and the care of cattle, with a view to placing them eventually on a self-supporting basis. The money derived from the surrender and sale of Indian lands has been applied to the purchase of modern agricultural implements, the construction of better houses on the reserves, and other improvements. The problem of transforming a race of nomadic hunters into tillers of the soil is a formidable one, but in the case of the Indians of the plains the efforts of the Government in this direction have met with remarkable success. As a result of the agricultural and stock-raising operations among these Indians, rationing is practically a thing of the past, except in the cases of those who are aged or invalids, and, therefore, unable to support themselves. It is part of the duty of the Indian Department to support and care for destitute Indians, just as municipalities and organized charities are obliged to look after those in a similar condition in white communities.

Instruction in farming and the care of stock is now given at the majority of the Indian schools, and the educational work among the young Indians is in this manner linked up with the agricultural advancement on the reserve. Upon leaving school an Indian pupil is assisted by a grant of cattle or horses, implements, tools and building material. This method of encouragement has proven to be a prominent factor in moulding the life of the Indian communities, and although disappointing individual cases are inevitable, the record of the ex-pupils on returning from the schools to the reserves is on the whole very satisfactory and amply repays the trouble and expense entailed in their education. A number of industrial schools for Indians have been established, which correspond on a smaller scale to the agricultural colleges of white communities.

British Columbia.—The principal occupations of the Indians living on the coast of British Columbia are fishing and working in salmon canneries. Many of the Indian fishermen have gasoline launches which they construct themselves with great skill and efficiency. Mixed farming is the principal occupation of the more advanced Indians in the interior agricultural parts of the province. In the

northern interior districts hunting and trapping continue to be the principal occupations of the Indians.

North West Territories and Yukon.—The Indians of these parts are almost solely dependent on fishing and hunting.

Health, Sanitation and Dwellings.—The health of the Indians generally does not differ very greatly from that of the other sections of the community, with the exception that they are even more susceptible to tuberculosis than other races. The standards of sanitation among them are not so good as might be desired, but there is a marked improvement from year to year. The officers of the Indian Department are paying particular attention to prophylactic instruction amongst them.

Aboriginally, the Algonquins and Athabascans dwelt in tepees, and the Iroquois in long houses of log construction. The British Columbian coast Indians dwelt in large barn-like community houses of frame construction, a few of which are still in use in the more backward villages. The houses of the Indians throughout the Dominion are now much the same as those of other people, although in the more remote and inaccessible parts a few still live in tepees.

The Indians in the Great War.—The Indians of Canada established a proud record in the Great War and well maintained the traditional loyalty of their ancestors who supported the British cause in 1776 and 1812. More than four thousand Indians enlisted with the Canadian Expeditionary Force, notwithstanding the fact that they were specially exempted from the operation of the Military Service Act. The Indian soldiers gave an excellent account of themselves at the front and were highly commended for their courage, intelligence, stamina and discipline. They excelled as sharp-shooters, and the tales of their individual prowess will live long in the history of the Dominion. The Indian returned soldiers are doing well and are taking advantage of the Soldiers' Settlement Act, which applies to them in the same manner as to other returned soldiers.

The Indians contributed upwards of $50,000 to the Patriotic, Red Cross and other War Funds, and on many of the reserves the Indian women were very active in Red Cross and other war work.

Statistical Tables.—Tables **11-16,** compiled from the Reports of the Department of Indian Affairs, give for the years named particulars respecting population, religion, education, agriculture and financial status. Table **16** shows that during the year 1920 crops to the value of $3,577,119 were raised by the Indians; the corresponding value in 1919 was $3,462,147. Educational advantages are provided for the Indians in day, boarding and industrial schools, and for educational purposes appropriations were made by Parliament amounting for the year 1920-21 to $1,112,419. Several bands of Indians assist, and during the fiscal year 1920-21 the sum of $47,297 was available from this source. As shown in Table **12,** the total number of Indian children enrolled as attending school during the fiscal year 1921 was 12,558, and the average attendance was 8,723.

The total expenditure from appropriations of the Indian Department for the year 1920-21 is $2,090,163. On March 31, 1921, the Indians had to the credit of their trust funds $11,458,661, derived from sales of lands and timber and from rentals of grazing and other lands. The amount named represents an increase of $558,604 over that of the preceding year.

PUBLIC WORKS.

Since Confederation and before, the Department of Public Works has been known as the constructing department. In 1879 the railways and canals were placed under control of a new department, the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department, and the smaller drill halls and armouries to the Department of Militia and Defence. The work of the Department of Public Works is now divided into three principal branches, viz., the Engineering Branch, the Architect's Branch, and the Telegraph Branch.

Engineering.—The Engineering Branch comprises the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, maintenance and operation of government dredging plant; the construction and maintenance of graving docks; the construction, maintenance and working of slides and booms; the construction and maintenance of interprovincial bridges and approaches thereto, and of bridges on highways of federal importance in the Northwest Territories and the maintenance of military roads; also hydrographic and ordinary surveys and examinations, inclusive of precision levelling and geodetic measurements which are required for the preparation of plans, reports and estimates; the testing of cements, etc. The Branch has charge of about 1,700 harbour works, 4 graving docks, 4 slide and boom works, interprovincial bridges, 40 dredges and 228 tugs, scows and other dredging plant.

Architecture.— The Architect's Branch builds and maintains government buildings, post offices, custom houses, examining warehouses, and constructs quarantine, immigration and experimental farm buildings, armouries, military hospitals and drill halls, land offices and telegraph offices. The most important public building now under construction is that of the new Houses of Parliament at Ottawa.

Telegraphs.—The Telegraph Branch has control over the construction, repair, and maintenance of all government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia, and the Yukon, and statistics relating to them are given on page 581.

Graving Docks.—There are four graving or dry docks completed and owned by the Canadian Government. The dimensions of these docks are shown in Table **17.** The dock at Kingston, Ontario, is under lease to the Kingston Shipbuilding Company. The dock at Levis, Quebec, east of the old dock, is 1,150 feet long, divided into two parts (650 and 500 feet respectively), and 120 feet wide; it has a depth at high water of 40 feet. It cost about $3,500,000. A new dock is under construction at Esquimalt, B.C.; the dimensions are given in Table **17.** Under the Dry Dock Subsidies Act, 1910

(9-10 Edw. VII, c. 17)[1], several docks have been subsidized by payments of 3 or 3½ p.c. per annum on the original cost for a given number of years, as shown by Table 18.

[1]Not yet commenced.

Expenditure and Revenue.—Table 19 shows the expenditure and revenue for the fiscal years 1916-21 of the Public Works Department of the Dominion Government. For the fiscal year 1921 the expenditure was $20,970,674, as compared with $20,455,460 in 1920, an increase of $515,214, due in the main to an increase in the expenditure on harbour and river works from $4,320,581 to $7,541,668. This was nearly counterbalanced by a diminished expenditure on military hospitals from war appropriation, $1,217,892, as compared with $4,337,127.

[1]For description of this Act, see Canada Year Book, 1910, p. xxviii.

HARBOUR COMMISSIONS.

A number of the harbours of Canada are administered by corporate bodies known as Harbour Commissions. Each Commission is constituted by a special Act of the Dominion Parliament, the number of Commissioners varying from three to five. The property of the Crown in the harbour is placed under the jurisdiction of the Commission and the Commissioners are authorized to acquire and hold real and personal property for the improvement and development of the harbour; but any property acquired from the Crown may not be alienated or in any way disposed of by the Commissioners without the consent of the Governor in Council. The Commissions are given power to make by-laws for all purposes of governing the harbour, and for the imposition and collection of rates on vessels and on cargo landed and shipped in the harbour, and penalties for infraction of their by-laws (but every such by-law must be confirmed by the Governor in Council before becoming effective), and they have control of the expenditure of the revenue received from these sources. For the purpose of harbour development and the construction of improvements, the Commission may, with the consent of the Governor in Council, expropriate land and borrow money on debentures issued against the security of the real and other property of the harbour. For the harbours of Quebec, Montreal and Vancouver the Dominion Government has advanced the Commissioners large

sums against such debentures. All the Commissions are under the direct inspection of an official of the Marine Department and are subject to the jurisdiction of the Minister of Marine and Fisheries in all matters.

The following harbours are administered by a Commission, the date of the Act under which each Commission received its present constitution and powers being given:—Montreal, 1894; Quebec, 1899; Three Rivers, 1882; Toronto, 1911; Hamilton, 1912; Belleville, 1889; Winnipeg and St. Boniface, 1912; Vancouver, 1913; New Westminster, 1913; North Fraser, 1913. The harbours of North Sydney and Pictou, Nova Scotia, were formerly under the Commission form of administration, but the legislation providing for Commissions in these harbours was repealed and all property and rights held by the Commissioners were revested in His Majesty by legislation passed in the years 1914 and 1920, respectively, repeal being effective from the 1st of January following in each case.

NATIONAL GALLERY.

The National Gallery of Canada was the outcome of the establishment in 1880 by the Marquis of Lorne and H.R.H. Princess Louise of the Royal Canadian Academy of Arts, which required the elected Academicians to deposit their diploma pictures in the National Gallery at Ottawa. The collections of pictures, statuary and other works of art now occupying premises in the Royal Victoria Museum in Ottawa consist of purchases made by means of the annual grants voted by the Dominion Parliament, the diploma works of the members of the Royal Canadian Academy and gifts and loans by persons interested in art. In 1907 an Advisory Arts Council of three members was appointed by authority of an Order in Council, and in 1913, under the National Gallery of Canada Act (3–4 Geo. V., c. 33), the Advisory Arts Council was constituted the Board of Trustees for the management of the National Gallery and the administration of its annual grants.

In addition to the care and management of the National Gallery, the Act imposes upon the Board responsibility for "the encouragement and cultivation of correct artistic taste and Canadian public interest in the fine arts, the promotion of the interests generally of art in Canada."

Amongst the collections of oil paintings now in the National Gallery are works by such old masters as Tintoretto, Caravaggio, Andrea del Sarto, Bartholomaus de Bruyn, Luca Giordano, Cima da Conegliano, Frans Floris, Chardin, Hogarth, Snyders, Daniel Mytens. The more modern schools include representative works by the great English masters: Reynolds, Hoppner, Beechey, Lawrence, Gainsborough, Millais, Leighton, Holman Hunt. The French masters include J. F. Millet, Edgar Degas, Claude Monet, Alfred Sisley and a number of others, while the contemporary British school is strongly represented by fine examples of the work of such artists as Arnesby Brown, Laura Knight, Glyn Philpot, W. Orpen, D. Muirhead,

G. Henry, Austen Brown, Adrian Stokes and many others. The Gallery includes an excellent and representative exhibition of the work of Canadian artists both past and present.

The National Gallery collections of engravings, etchings, lithographs, etc., have been developed and formed into a department of prints with a special curator at the head. Important acquisitions have recently been made to it of works by Mantegna, Robetta, Nicholetto, Rosex, D. Campagnola, Marcantonio, Canaletto; Master M.Z., Schongauer, Durer, Altdorfer, Aldegrever, Pencz, Hirschvogel, Hollar; Master W.C.I.E.F., Van Dyck, van Leyden, Rembrandt, Ostade, Potter, van de Velde, Bega, Berchem, Ruysdael; Duvet, Gellee, Mellan, Morin, Nanteuil, Drevet, Jacque, Millet, Corot, Raffet, Isabey, Bonington, Meryon, Braquemond, Jacquemart, Legros, Lepere; Harding, Blake, Crome, Daniel, Wilkie, Geddes, Haden, Short, Strang, McBey, Brangwyn, Shannon, Gabain; Whistler, Zorn.

One of the most important activities of the National Gallery is its Loan Exhibition work. Under this policy the National Gallery lends to any art body or society in Canada, which possesses the necessary facilities, a collection of Canadian paintings, either for one year or for shorter periods. During 1921 sixteen (16) loans have been distributed, and practically every important city in Canada has thereby gained a better knowledge of Canadian art. The aggregate value of loans made during the past five years is over $1,000,000.

After having been closed to visitors since February, 1916, during which time the halls were occupied by the Houses of Parliament, the National Gallery was reopened September 12, 1921, with extended premises and augmented collections of art objects.

PUBLIC DEFENCE.

Military Forces.—Before the outbreak of the war, the Canadian Militia consisted of a Permanent Force, which on March 31, 1914, numbered 3,000 officers, non-commissioned officers and men, and an Active Militia, which at the same date numbered 5,615 officers and 68,991 non-commissioned officers and men. Subsequently to the outbreak of the war on August 4, 1914, successive contingents of troops of all arms were recruited, equipped, trained and despatched by the Canadian Government to Great Britain for active service as part of the Imperial forces. When hostilities ceased on November 11, 1918, there had been sent overseas for active service in the Canadian Expeditionary Force about 418,000 officers, non-commissioned officers and men.

Table **20** showing the militia expenditure and revenue for the five fiscal years 1917 to 1921, is taken from the Report for the year ended March 31, 1921, of the Militia Council. This table shows that the ordinary expenditure of the Department of Militia and Defence for the year ended March 31, 1921, was $10,058,625, as compared with $4,634,516 for 1920, $3,444,954 for 1919, $3,893,896 for 1918, and $4,359,289 for 1917. The ordinary revenue amounted to $277,309 for the year ended March 31, 1921, as compared with $194,820 for 1920, $118,019 for 1919, $86,354 for 1918 and $169,254 for 1917.

Expenditure on Account of War Appropriations.—Table 21 shows the total expenditures on war appropriation by the Department of Militia and by other departments, by fiscal years from 1914-15 to 1920-21. The total net expenditure by the Department of Militia is shown to be $1,545,281,734 and by other departments $142,121,965, a grand total of $1,687,403,699. This amount might at first sight be considered as the cost of the war to Canada up to March 31, 1921, but it does not allow for interest charges which have been paid on the debt contracted for war purposes. This indeed can hardly be accurately separated from interest charges on the debt existing in 1914, but a comparison of the annual interest paid in the war years and down to 1921 will show that the direct cost of the war to the national treasury cannot have been less than $2,000,000,000, exclusive of amounts spent on re-establishment and pensions.

21.—Expenditures on Account of War Appropriations for the Years ended March 31, 1915-1921.

Royal Military College.—The Royal Military College of Canada was founded in 1876 by Sir Alexander Mackenzie, Prime Minister of Canada. Since its foundation some 1,658 gentlemen cadets have been enrolled; of this number 153 are now in attendance and approximately 160, though their names appear on the College roll as having been admitted, either did not actually join or, if they did, were only at the College a very short time. Of the remainder, some died previous to August 4, 1914. Over 900 took part in the Great War, 147 of whom laid down their lives for king and country. Some 750 British and 75 foreign decorations have been awarded to ex-cadets, and many have risen to high rank in the service of their country. Three of the Canadian Divisions serving in France were commanded by ex-cadets and an ex-cadet also commanded one of the Australian Divisions at Gallipoli. The establishment of the College, as stated in the Act of 1874 (37 Vict., c. 36), was "for the purpose of imparting a complete education in all branches of military tactics, fortifications, engineering and general scientific knowledge in subjects connected with and necessary to a thorough knowledge of the military profession, and for qualifying officers for command and staff appointments." In addition to the foregoing, the course of instruction is such as to afford a thorough, practical and scientific training in civil engineering, surveying, physics and chemistry, English and French. Strict discipline, combined with physical training, riding, drill and outdoor games, forms part of the curriculum.

The College is situated on a beautiful peninsula, one mile from Kingston, with the Cataraqui river on the one side, emptying into the St. Lawrence river at its junction with lake Ontario, and Navy bay on the other. The grounds include about 500 acres on which are situated the buildings of the College proper, on the above-mentioned peninsula, comprising 60 acres. The remainder of the grounds are at the disposal of the College for use as a training area on which stands the historic fort Henry. On the point of the College peninsula is situated fort Frederick, built in 1837, when Kingston became capital of Canada, the fort comprising a portion of the defences of Kingston. The College is under the supervision of Militia Headquarters who annually appoint an advisory board composed of leading Canadian citizens both civil and military. The staff is composed of a commandant, a staff-adjutant, assisted by a competent staff of civil and military professors and instructors.

A four years' course leads to a "Diploma with Honours" or "Diploma" and "Certificate of Discharge." To graduates are annually offered a number of commissions in the Canadian Permanent Force as well as commissions in the Royal Artillery, Royal Engineers and other branches of the regular Britannic Army. To those graduates joining the Britannic Army, the privilege of one year's seniority is granted in the Britannic or Indian Armies. This has been arranged in order to equalize the seniority of graduates of the Royal Military College of Canada with those of Woolwich or Sandhurst, since the course at the latter institution is shorter than the Canadian. Positions

in the Public Works Department, Hydrographic Surveys, etc., are also available for graduates. The McGill University and the University of Toronto admit graduates to the third year in their Science Faculties, and the law schools also offer privileges.

Department of the Naval Service.

The Naval Service of Canada was established by the Naval Service Act, 1910, chapter 43. As established by that Act, the Department consisted of the following branches:—

1. Naval Service.
2. Fisheries Protection Service.
3. Tidal and Current Survey.
4. Hydrographic Survey.
5. Radiotelegraph Service.

In 1914 the Fisheries Service and Life Saving Service were transferred from the Marine Department to the Naval Department, but these two services were again placed under the Marine and Fisheries Department on July 1, 1920.

During the Session of 1922, the Government brought down legislation providing for the establishment of a Department of National Defence to be formed from the Department of Militia and Defence, Department of the Naval Service and the Canadian Air Board. This Act has by Proclamation been made effective Jan. 1, 1923.

On July 1, 1922, the Naval Service Department was reorganized preparatory to becoming part of the National Defence Department, and the Fisheries Protection Service, Tidal and Current Survey, Hydrographic Survey, Patrol of Northern Waters, and Radiotelegraph Service were placed under the jurisdiction of the Department of Marine and Fisheries.

During the Session of 1922 the Government announced its intention of establishing Naval Reserve Forces in Canada; it also announced that one destroyer and two patrol vessels would be maintained on each coast for training purposes, these ships to be manned by officers and men of the Royal Canadian Navy. In preparation for carrying out the programme announced by the Government, the cruiser "Aurora" and submarines "C.H. 14" and "C.H. 15" were placed in reserve, and the Royal Naval College of Canada at Esquimalt and the Youths' Training Establishment at Halifax, were closed. The dockyard at Halifax was reduced to a supply base, and all workshops were closed. Naval barracks for the accommodation of officers and men of the Royal Canadian Navy, and also of the reserve, were established at Halifax and Esquimalt, and full preparations were made for the organization and maintenance of the Naval Reserve Forces.

The headquarters offices of the Naval Department at Ottawa, were moved from the Hunter Building to the third and sixth floors of the Canadian Building, and the staffs have been re-organized in readiness for amalgamation in the formation of the Department of National Defence.

The total appropriation for the Naval Department for the fiscal year 1921-22 was $4,097,070, of which sum $3,514,029 was expended. The appropriation for the fiscal year 1922-23, excluding services transferred to the Marine Department, was $1,500,000. Out of this amount $736,000 was expended up to October 31, 1922.

Air Board.

The Air Board Act of 1919 (9-10 Geo. V, c. 11) empowered the Governor in Council to appoint an Air Board of from five to seven members, with a Minister of the Crown as chairman, to control aerodromes, aircraft, etc., and generally aerial navigation in Canada and its territorial waters. The work of the Board falls into three main divisions: control of civil aviation, the direction of flying operations for other Departments of the Government, and the direction of the Canadian Air Force. On December 31, 1921, there were 52 certificated private air pilots and 61 certificated commercial air pilots, as well as 147 certificated aircraft. Flights to the number of 1,209, covering 185,480 miles, were completed in 1921 from the civil government air stations at Vancouver, High River (Alberta), Victoria Beach, (Man.), Sioux Lookout (Ont.), Ottawa, Roberval (Que.), and Halifax, for various Departments of the Dominion and Provincial Governments. The Canadian Air Force, with headquarters at Ottawa and a training station at Camp Borden, had on its payroll in 1921, 54 officers and 239 airmen; but 1,281 officers and 1,350 airmen were on its establishment, of whom 505 officers and 1,166 airmen had been trained.

Creation of the Department of National Defence.

During the session of 1922, an Act (12-13 Geo. V, c. 34) was passed combining the Department of Militia and Defence, the Department of Naval Service and the Air Board into one Department, to be known as "The Department of National Defence." During the summer of 1922 re-organization of the Department was proceeded with and the new Department will be established as from Jan. 1, 1923.

ROYAL CANADIAN MOUNTED POLICE.

The Royal Canadian Mounted Police (formerly the Royal Northwest Mounted Police) are distributed throughout the Dominion, with headquarters at Ottawa. The operations of the force for the year ended September 30, 1921, are described in the Commissioner's Report for that year, which shows that during the year the Royal Canadian Mounted Police discharged numerous and varied functions, in several instances assisting provincial administrations in the maintenance of law and order, co-operating with the Dominion Department of Health in putting down the illicit traffic in narcotics, with the Secretary of State in inquiring into the suitability for citizenship of applicants for naturalization, with the Department of Marine and Fisheries in protecting property in cases of wrecks and in enforcing fisheries regulations, with the Post Office Department in tracking down mail robbers, with the Dominion Bureau of Statistics in the taking of the census in outlying communities, and with the Department of Indian Affairs

in the enforcement of the Indian Act, while important patrol work has been done in the Arctic regions. On September 1, 1921, the strength of the force was 70 officers, 1,610 non-commissioned officers and constables, 795 horses and 138 dogs, numbers showing only slight variation from the previous year. On February 1, 1920, under authority of an Act to amend the Royal Northwest Mounted Police Act (10 Geo. V, c. 28), the name of the latter force was changed to "Royal Canadian Mounted Police," the Dominion Police force was merged with it and its headquarters transferred from Regina to Ottawa.

22.—Strength and Distribution of the Royal Canadian Mounted Police on September 30, 1921.

DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT.

Under Order in Council of June 30, 1915 the "Hospital Commission" was created to provide for the treatment of returning wounded and disabled soldiers, and in October of that year a revised Order in Council changed its name to "Military Hospitals Commission," and empowered it to carry on vocational training and to deal with the subject of employment.

Two Orders in Council were passed on February 21, 1918, one creating the Department of Soldiers' Civil Re-establishment and the other charging the Department of Militia and Defence with all active treatment cases except those suffering from tuberculosis, insanity and other diseases likely to be of long duration. This arrangement was confirmed by the Department of Soldiers' Civil Re-establishment Act, 1918 (8-9 Geo. V, c. 42).

The earlier activities of the Department of Soldiers' Civil Re-establishment have been described in the Year Book of 1920, pp. 21-29, to which the reader is referred for a general idea of the work of the Department in providing medical treatment, vocational training, retraining of the blind, provision of artificial limbs and appliances and post-discharge dental treatment. These activities naturally reached their maximum in the period following the armistice, the largest number of employees of the Department being 9,035 in March,

1920. On December 31, 1921, the total staff, after including 854 transferred during 1920 from the Board of Pension Commissioners, was 4,886, of whom 3,381 were males, 3,132 of these having been on active service in France, England or Canada.

At the close of 1921 the Department of Soldiers' Civil Re-establishment was directly operating 17 hospitals and indirectly 9, with a total bed capacity of 5,839 in Departmental and outside institutions and 824 in hospitals under contract. In-patients on December 31, 1921, numbered 5,053 and out-patients 287. In all of these hospitals dietitians who make monthly reports on food costs have been placed; an elaborate system of cost accounting is maintained.

Two psychopathic hospitals are now being operated by the Department, one at Westminister, near London, and the other at Ste-Anne de Bellevue, Que. Here all classes of nervous and mental diseases are treated, and the most up to date methods, including continuous baths and other hydrotherapeutic installations, are in use. There is also equipment for occupational therapy, including both indoor and outdoor work of a constructive nature as well as ward classes for bed patients and for those who are otherwise confined to the wards. To this work is detailed a special medical officer whose duty is to survey all patients and to make individual studies from the viewpoint of their physical and mental equipment, also of their occupational capacity and adaptability. The Department also has patients in a large number of provincial hospitals for the insane, and keeps close supervision, through the neuropsychiatric Branch of the Medical Service, over the treatment of these patients and the conditions under which they are living. On December 31, 1921, the number of neuropsychiatric patients on strength was: mental, 1,068; nervous, 569; total, 1,637.

War Pensions.—A Board of Pension Commissioners for Canada, consisting of three members, was created by Order in Council of June 3, 1916, (P.C. 1334) with exclusive jurisdiction and authority to deal with the granting and payment of naval and military pensions and other allowances to persons in the Canadian Naval Forces and the Canadian Expeditionary Force and to their dependants. There is no appeal from the decisions of the commission, but applicants may appear in person or by counsel before the commission to present complaints.

Under Orders in Council of April 12, 1921, (P.C. 1187), Aug. 17, 1921, (P.C. 2722), and Dec. 1, 1921, (P.C. 4500), and under authority of the Pension Act of 1919 (9-10 Geo. V, c. 43), the administration of the head office of the Board of Pension Commissioners was transferred to the Department of Soldiers' Civil Re-establishment as from April 1, 1921, the Pension Commissioners, however, continuing to exercise full power and authority in dealing with the granting and renewing of and adjudication upon pensions.

The scale of pensions has been revised several times by Orders in Council and Acts of Parliament. Under the existing scale of pensions for disability as established by Chap. 45 of the Statutes of 1921, twenty classes are provided, ranging from 100 p.c. or total disablement to 5 p.c. of disablement. The pensions range for the rank and file, according to

the class of disablement, from $600 down to $30 per annum (with a bonus of 50 p.c. of these amounts during the years commencing September 1, 1921, 1922 and 1923). The pensions for total disablement range from $600 for the rank and file up to $2,700 for persons of and above the rank of commodore or brigadier-general. Married members of the forces receive additional amounts ranging from $300 per annum for 100 p.c. of disablement to $15 per annum for 5 p.c. of disablement. Similarly, for disabled soldiers with children there is an additional pension ranging from $180 to $9 for the first child, from $144 to $9 for the second child, and from $120 to $6 for subsequent children. No pension is paid in respect of boys over 16 or girls over 17 except in case of their physical or mental infirmity, or where the child is making satisfactory progress in a course of instruction approved by the Commission, when the pension may be paid until the child has reached the age of 21. The existing scale of pensions in cases of death is given in Table **23**, in cases of disability in Table **24**, while Table **25** gives statistics of pensions in force on Dec. 31, 1921.

The bonus payments set forth in this Schedule shall be paid during the years commencing September 1, 1922 and 1923. Members of the forces permanently disabled to a less extent than five per cent shall be entitled to a final payment not exceeding $100.

Members of the forces who are at the time of retirement or discharge, or who later become disabled to an extent of between five and fourteen per cent may elect to accept a final payment in lieu of the pensions set forth in this Schedule. The amount of such final payment in cases of disability between five and nine per cent shall not exceed three hundred dollars and in cases of disability between ten and fourteen per cent shall not exceed six hundred dollars and shall be determined in accordance with the extent of the disability and its probable duration. Members of the forces permanently disabled between ten and fourteen per

the Canadian Naval Forces and the Canadian Expeditionary 1, 1921, 1922 and 1923, under the Pension Act.

cent shall receive six hundred dollars. Members of the forces permanently disabled between five and nine per cent shall receive three hundred dollars. If an election has been made to accept a final payment such election is final unless the disability of the member of the forces concerned becomes greater in extent, in which case the pension shall be adjusted for the past period in accordance with the extent of the disability and the amount paid as a final payment shall be deducted. If a married pensioner desires to elect to accept a final payment the consent of his wife must be secured. All payments of pension made subsequent to the time at which an award of fourteen per cent or under is made shall be deducted from the amount of the final payment.

Returned Soldiers' Life Insurance.—Under the Returned Soldiers' Insurance Act of 1920, (10–11 Geo. V, c. 54), a system of life insurance at very favourable rates was established for returned soldiers, whose lives might not be considered as insurable by life insurance companies. The general features of the scheme were described on pages 38–40 of the 1920 Year Book, to which the reader is referred. Under 12–13 Geo. V, c. 42, the limit of time during which applications may be received has been extended to September 1, 1923. Applicants with or without pensionable disability who are so seriously ill that they have no expectation of life, and who have dependants entitled to become beneficiaries, may be insured up to Jan. 1, 1923. Up to Dec. 31, 1921, the number of applications received and approved was 7,980, the premiums received were $352,769, and the total sum assured was $19,589,500; the total death claims to that date were 180, aggregating $645,000.

THE SOLDIER SETTLEMENT BOARD.

The Soldier Settlement Board.—The Soldier Settlement Board was organized under the authority of the Soldier Settlement Act, 1917, (7–8 Geo. V, c. 21), and empowered to assist eligible returned soldiers to settle upon the land. By the Soldier Settlement Act, 1919, (9-10 Geo. V, c. 71), the scope of the work was extended and the Board was authorized to purchase for returned men agricultural lands in any province. The earlier proceedings of the Soldier Settlement Board have been described on pages 29-35 of the Year Book for 1920, to which the reader is referred.

The soldier settlers who had taken up land under the Soldier Settlement Board with money borrowed from the Government, not being well established, suffered even more than other agriculturists from the great decline in agricultural prices indicated by the table on page 272 and its accompanying diagram. Consequently, the Soldier Settlement Act of 1919 was amended by chapter 46 of the statutes of 1922.

While the Act of 1919 and its amendments of 1920 called for the repayment of stock and equipment loans on unimproved property in 6 years and on improved property in 4 years, and of loans for land purchase, removal of encumbrances and permanent improvements in 25 years, the recent amendments make all loans for whatever purpose run for 25 years. Settlers who were on the land prior to October 1, 1921, will have all their indebtedness to the Board up to April 1, 1922, consolidated into one loan, and interest will be added to October 1, 1922. All such settlers have been given an exemption of interest for periods of from two to four years from October 1, 1922, depending on the year they were established. Those settled before October 1, 1919, will receive four years' exemption, that is, to October 1, 1926. During the interest exemption period repayments will be on principal only, amounting each standard date to one twenty-fifth of the consolidated indebtedness. After this period, interest and principal are amortized and are repayable in equal annual instalments. Three years' interest exemption is granted to the 1920 settler and two years' to the 1921 settler.

Since the compilation of the statistics given on page 31 of the 1920 Year Book, a considerable number of loans have been made. Up to Mar. 31, 1922, 63,323 returned men had applied to the Board for loans and 45,180 had been accepted as qualified. Loans had been granted to 21,394 applicants, distributed by provinces as follows:

	Number of Loans.	Amount in $
Prince Edward Island	336	924,438
Nova Scotia	400	1,365,569
New Brunswick	568	1,757,388
Quebec	416	2,092,482
Ontario	1,628	7,001,765
Manitoba	3,378	14,495,488
Saskatchewan	5,336	21,586,288
Alberta	6,260	25,580,812
British Columbia	3,072	13,724,767
Canada	21,394	88,528,997

Loans were granted for the following purposes:	$
To purchase land	48,838,781
To remove encumbrances on land owned by settler	2,081,977
To erect permanent improvements	10,306,663
To purchase stock and equipment	27,301,576
	88,528,997

In addition to those who have received money advances from the Government, 6,073 men who have taken up soldier grants and are eligible for loans have not yet taken advantage of this privilege.

Since the commencement of the Board's obligation more than 600,000 acres of raw land has been brought under cultivation by soldier settlers. In 1921 settlers brought 189,664 acres of new land under cultivation and at the end of the fiscal year the total area of land occupied by returned men under the Act was 5,238,449 acres.

The estimated value of crops raised by soldier settlers in 1921, a lean year in agriculture generally, was $12,765,132. Livestock owned by settlers on March 31, 1922, was valued at $13,829,601. Out of the amounts advanced by the Finance Department for loans to soldier settlers there had been returned $11,885,781, so that on Mar. 31, 1922, the outstanding liability was about $76,000,000.

DOMINION DEPARTMENT OF HEALTH.

The activities of the Department of Health of the Dominion Government come under the following ten headings: Quarantine Service, Immigration and Medical Service, Food and Drug Laboratories, Opium and Narcotic Drugs, Proprietary or Patent Medicines, Marine Hospitals Service, Venereal Disease Control, Child Welfare, Housing, Medical Research.

Quarantine Service.—Eight quarantine stations were kept in operation during the year, namely, at Charlottetown, P.E.I., Chatham, N.B., Halifax, N.S., Louisburg, N.S., North Sydney, N.S., Quebec, P.Q., St. John, N.B., and Victoria, B.C. The number of vessels that reported at the stations above mentioned was 1,703 and the number of examinations made of individuals was 322,238.

There were 609 admissions to the quarantine hospitals, 247 of this number being patients and the balance "contacts," or persons who accompanied the sick; while the total number of days in hospital amounted to 7,065 for all classes of admission. There were twenty-two different classifications of disease, of which chickenpox with 11, measles with 108, mumps with 13, pediculosis with 28, and scarlet fever with 11 cases, were the largest contributors. There was only one case of smallpox, and but seven cases of influenza.

The leper station (Tracadie lazaretto) at Tracadie, N.B., had at the close of the year ten patients under treatment. Five of this number were female and five male. It is interesting to note that this is the smallest number since the lazaretto was opened. No new cases were admitted, but three inmates died during the period; two males, aged 67 and 64, and the third a female aged 54. The leper

station (lazaretto) at D'Arcy Island, B.C., had five inmates, all of them being Chinese. One patient was released and one new case was admitted.

Immigration Medical Service.—For the purpose of detecting physical or mental defects, 63,990 immigrant passengers were examined, and of this number 736 were found to be of the prohibited classes, and a further number of 358 were found upon arrival to require medical or surgical treatment. In addition to the 736 who were found to come within the prohibited classes, 722 were found to have minor defects, which data were entered in the individual cards for future reference.

Food and Drug Laboratory.—During the year 225 prosecutions were entered for violation of the Food and Drugs Act, 203 of these having been completed and 22 being in progress. The list of articles which go to make up the above number of prosecutions is wide in range, and of the 225 cases but one was dismissed by the court. In the examination and analysis of foods, beverages and medicinal preparations, approximately 2,300 items came under notice because of complaints received respecting adulteration or to see that they conformed with the Act.

Opium and Narcotic Drugs.—During the year 389 licenses were issued covering the following four classifications: Import Licenses, Export Licenses, Wholesale Druggists' Licenses and Retail Druggists' Licenses to manufacture, the total fees received for all licenses issued being $3,850. Statistics of narcotic drugs imported show marked reductions in importation in the fiscal year ended Mar. 31, 1922, as compared with 1919, before the Department of Health was created. The following examples may be given, 1919 figures being in parentheses:—1922, cocaine 2,952 oz. (12,333 oz.), morphine, 8,774 oz. (30,087 oz.), crude opium, 1,700 lbs. (34,263 lbs.).

Close supervision is maintained on all exports and imports of narcotics, and the licensing system enables the department to know at all times of the amount of these drugs received by every druggist, veterinary surgeon, dentist or physician in Canada. By this system it is possible for the Department to check up the disposition of these drugs to make absolutely certain that the use being made of them does not contravene the Act. While the illicit traffic is much more difficult a problem to handle, no fewer than 835 convictions were obtained during the year. Figures are not available to show the number of convictions other than by the Royal Canadian Mounted Police for infractions of the Act for the fiscal year, but for the judicial year ended September 30, 1921, there were in all 1,864 prosecutions, including the 669 Dominion cases.

Proprietary or Patent Medicines.—During the year 4,100 preparations were covered by licenses authorizing their sale in Canada, and registration numbers were allotted accordingly. Periodically samples of various medicines are obtained in the open market and are sent to the laboratory for analysis, for the purpose of confirming the

ingredients contained in each. A large amount of goods was seized and confiscated because of non-conformity with the Act. Careful perusal of the newspapers and other advertising is made to obtain copies of illicit advertising. The fundamental principle of the Act is to require the manufacturer of proprietary medicines to place his preparation on the market so that the ordinary layman may understand what he is taking. Nearly all the druggists in Canada are co-operating with the Department in the operation of this law.

Marine Hospital Service.—During the year two marine hospitals were operated. One was at Sydney, N.S., and the other at Louisburg, N.S., while arrangements were made whereby sick or distressed mariners would be treated at 49 other hospitals throughout Canada, with the exception of the province of Ontario, where the Act does not apply. During this period 2,035 sick or injured mariners were treated.

Venereal Disease Control.—The sum of $200,000 was granted by the Dominion Government for the work of venereal disease control, and of this sum $10,000 was granted to the Canadian National Council for Combating Venereal Disease; $10,000 was retained for current expenses, and the balance was divided among the provinces as follows, the number of clinics in each province being given in parentheses: New Brunswick (8), $7,518; Nova Scotia (5), $10,574; Alberta (4), $11,980; Manitoba (4), $12,611; British Columbia (2), $14,628; Saskatchewan (8), $15,361; Quebec (8), $47,389; Ontario (13), $57,474. Free hospital accommodation and free treatment in institutions has been provided, as well as laboratories operating in all the provinces. In addition to the publications issued by the Department of Health of the Dominion Government (15 in number, obtainable in English and French, the circulation of which amounted to over half a million copies), the provinces have issued a large amount of educational literature on the subject.

Child Welfare.—In addition to the co-operative work with the different provinces, this division has been able to supplement the work carried on by other government departments. In the educational programme of this division, pamphlets, posters, cards and a moving picture film have formed a large part of the work. Over 150.000 copies of the "Canadian Mother's Book" have been distributed. The "Little Blue Books, Home Series," 14 in number, were so much in demand that it was found necessary to issue a second edition of the series. The first edition of 10,000 sets was used up in less than six months. All publications from this division are issued in English and French, and the total number of child welfare publications issued during the period amounted to 365,503. Up to November 30, 1921, no less than 55,000 copies of the "Card to Baby's Mother" had been sent to the district registrars. Some 50,000 sets of rhymed posters were printed on cards and distributed to fall fairs, baby health demonstrations and similar meetings held in connection with the child welfare movement.

Housing.—The total amount expended to the end of the fiscal year was $17,108,120, distributed amongst the following six provinces, viz.: Manitoba, New Brunswick, Ontario, British Columbia, Quebec and Nova Scotia. The total number of houses erected, exclusive of New Brunswick, was 3,874; houses under construction and planned to be built, 179; while 175 municipalities were co-operating. With the exception of the province of Alberta, all the provinces have enacted Housing Acts.

Medical Research.—The obtaining and installing of laboratory equipment and supplies has progressed so far as to allow of the commencement of research work which takes the form of the examination for potency of all curative sera and vaccines placed upon the Canadian market; standardization control of preparations of such drugs as ergot, digitalis, strophanthus, suprarenal glands and of the pituitary body, together with bacteriological examinations of raw and canned foods, feces, milk, water, etc. Pathological work will be largely confined to co-ordination of bacteriological requirements, although all types of work demanding attention will be undertaken.

JUDICIAL AND PENITENTIARY STATISTICS.

The collection and publication of Criminal Statistics was first authorized by an Act of 1876 (39 Vict., c. 13), and the results have been published upon a comparable basis in an annual report from 1880 to the present time, being now collected and published by the Dominion Bureau of Statistics under the Statistics Act (8–9 Geo. V., c. 43), which provides for the receipt of an annual return by the Bureau from every court or tribunal administering criminal justice. The statistics as published show for each judicial district (148 in number) the offences that have been committed, analysed to indicate the nature of the offence, the age, sex, occupation and social condition, birthplace, etc., of the convicted, and the sentences imposed. The Act also provides for the collection of the statistics of penitentiaries, prisons, reformatories and jails as complementary to the preceding. The statistics relate to years ending September 30, the last report being for 1920. These statistics are divided into two classes of (1) indictable and (2) non-indictable offences, the former comprising all cases tried by police or other magistrates and the latter all cases of minor importance disposed of by justices of the peace under the Summary Convictions Act. A historical table giving the totals for different classes of indictable offences and the grand total for non-indictable offences from 1876 to 1920 is here published (Table **26**). In the consideration of this table it should be remembered that while the criminal code undergoes little change over periods of time, the figures of summary convictions depend very much upon the changes in the customs of the people and are apt to increase with the increasing urbanization of the population. The most significant column of Table **26** is the figure of criminal offences per 100,000 of population.

Indictable Offences.—Table 27 shows by provinces in respect of indictable offences the number of charges and convictions and the percentages of acquittals for the years 1918, 1919 and 1920. There were 23,213 charges and 18,443 convictions for indictable offences throughout Canada during the year ended September 30, 1920, as compared with 23,021 charges and 18,396 convictions in 1919, an increase of 191 or 0·83 p.c., for charges and of 47 or 0·25 p.c., for convictions over the previous year.

Summary Convictions.—The number of summary convictions —that is, the total number of convictions for all offences less the number of convictions for indictable offences—in 1920 was 144,265, as compared with 111,623 in 1919. This represents an increase of 32,642 or 29·24 p.c.

Death Sentences.—During the year ended September 30, 1920, there were 26 persons sentenced to death for murder as compared with 28 in 1919. The number of commutations of death sentences in 1920 was 13 to imprisonment for life and 1 for fifteen years, compared with 6 to imprisonment for life and 1 for twelve years in 1919.

Police Statistics.—In the annual report of Criminal Statistics for the year ended Sept. 30, 1920, are given for the first time statistics of the total number of offences "known to the police", supplementing the previous figures of cases dealt with by the courts. It is clear that an increase or decrease in the number of offences committed cannot be accurately indicated by the number of actual prosecutions, and with a view to collecting as complete data as possible, detailed information relative to police activities has been obtained for the calendar year 1920 from 88 of the largest cities and towns in the Dominion.

The number of police in the 88 cities and towns making returns was 3,614. The number of offences reported or known to the police during the year was 183,126; 151,468 persons were arrested or summoned to stand trial, the perpetrators of over 31,000 offences remaining undiscovered. The number of thefts known to have been committed was 22,820, whereas the number of charges for theft total 10,575, and the convictions 8,678. There were 5,655 burglaries and house and shop breakings, the charges and convictions being 2,317 and 2,073 respectively. Highway robberies to the number of 663 were reported, yet the number of all cases of robbery dealt with by the courts was but 332, with 237 convictions. Automobiles numbering 3,682 of a value of $4,762,043 were reported stolen, of which 3,534 were recovered. The number of bicycles reported stolen was 4,814 and of those recovered 2,624. In addition the police found 2,325 bicycles which had not been reported stolen, and found claimants for 2,151 of these. The value of all other articles reported stolen was $2,325,755, and of this amount $1,336,027 was recovered. Photographs of prisoners taken totalled 5,217, finger prints, 12,499 and identifications established, 1,724. Street accidents reported numbered 13,766. Shelter was given to 22,927 persons and 5,212 children were found and returned to their homes.

Juvenile Delinquents.—In Canada, as in other countries, the number of juvenile delinquents coming before the courts has increased very considerably in recent years. In 1920, 3,355 persons under 16 years of age were convicted of indictable offences, as compared with an annual average of 972 in the three years 1901 to 1903— an increase out of all proportion to the increase in population. Alarming conclusions have been based upon these and similar statistics of other countries, but it may be that the increase is due rather to increasing urbanization and the better enforcement of the laws than to any real lowering of the moral standards of the young. Of the 3,355 convictions in1920, 2,211 were for theft and 801 for burglary, house and shop breaking. Of those convicted, 2,518 were let off with a warning, bound to keep the peace or allowed to go under suspended sentence.

30.—Juvenile Criminals convicted of Indictable Offences by Classes of Offence, 1920, with the total and yearly average for the period 1885-1920.

Increase of Drunkenness.—The number of summary convictions for drunkenness in Canada was 39,769 in 1920, as compared with 24,217 in 1919, an increase of 15,552, or 64·22 p.c. Table **34** shows the number of convictions by provinces for the five years 1916 to 1920, with increases and decreases for 1920 as compared with 1919, from which it will be seen that drunkenness, at least as measured by statistics of summary convictions, increased during the year 1920 in every province and in Yukon Territory.

Penitentiaries.

The statistics of penitentiaries given in Tables **36-39,** are compiled from the annual reports to the Minister of Justice of the Inspectors of Penitentiaries. The report for the fiscal year 1920-21, in reference to the parole system, states that the total number of paroles granted during twenty-two years of operation is 13,512. A total of 12,152 persons have completed their probation on parole and occupy positions in good citizenship to-day, and 588 prisoners are now reporting and have in prospect the completion of their probation on parole. The total delinquency for non-compliance with conditions of license is 469, or 3.5 p.c., and for subsequent conviction 303, or 2.2 p.c., making a total delinquency of 5.7 p.c.

Notes.—In Prince Edward Island only one divorce has been granted since 1868 to 1921; this was granted in 1913. In British Columbia, in addition to the divorces, 13 judicial separations have been granted; one in 1892, one in 1893, one in 1899, two in 1900, two in 1903, three in 1913, three in 1914. In consequence of a decision of the Imperial Privy Council divorces in Manitoba, Saskatchewan and Alberta have subsequently to 1918 been granted by the Courts of these provinces. [1]Includes one judicial separation. [2]Includes one not effective till court costs are paid. [3]One by Parliament. [4]Granted by Courts.

THE DOMINION BUREAU OF STATISTICS.

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada; (8-9 Geo. V, c. 43.—"An Act respecting the Dominion Bureau of Statistics"). The Act was a consolidation of all previous statistical legislation (the Census Act, the General Statistics Act, the Railway Statistics Act, etc.), with important additions.

The Act was based on the report of a Commission on Statistics appointed in 1912, which critized severely the omissions, inequalities, overlappings and lack of coherence and common purpose in Canadian official statistics, and recommended (a) a series of specific reforms and enlargements, and (b) a policy of statistical co-ordination for the Dominion under central direction.[1]

In 1915, following the recommendations of this report, the office of Dominion Statistician was created, and the next two years were devoted to the drafting in detail of the various plans involved, which included a monograph on each important field of statistics, covering the statistical work of all the Departments. A memorandum entitled "A National System of Statistics for Canada," was printed for the Cabinet prior to the final adoption of these plans. Subsequently the Bureau was created in 1918.

Creation of the Bureau.

The Bureau was constituted by the transfer or absorption by Orders in Council of the following work and branches: (1) The Census and Statistics Office (covering the census, and also agriculture, general manufactures and criminal justice); (2) Fisheries Statistics, (3) Mining Statistics, (4) Forestry Statistics, (5) Dairying and Fruit Statistics, (6) Water and Electric Power Statistics, (7) The Railways and Canals Statistical Branch of the Department of Railways and Canals, (8) the Trade Statistical Branch (exports and imports), (9) Grain Trade Statistics, (10) Live Stock Statistics, and (11) Prices Statistics (in part). In addition four new branches were erected, dealing respectively with Public Finance, Internal Trade, Vital Statistics and Education. Subsequently the statistical activities of the Fuel Controller and of the Board of Commerce were absorbed. Modifications of the Bankruptcy, Public Health, and Railway Acts and of the Regulation on franking privileges were also made.

[1]Other official bodies had drawn equally pointed attention to the deficiencies in Canadian statistics. These statistics had previously consisted of reports brought out independently by Dominion and Provincial Departments on subjects within their respective interests. The B.N.A. Act had assigned "statistics" to the Dominion Government, implying that statistics are a national concern and that it is the duty of the Dominion Government, while not precluding provincial statistics, to organize the field from a national standpoint. Previously to 1916 that duty had not been undertaken. For a brief account of Dominion and Provincial statistical activities from the earliest times up to 1912, see "First Annual Report of the Dominion Statistician, 1919," pp. 9-14, which sums up as follows: "A considerable but desultory body of statistics had grown into existence, in certain sections good work was being done—in others not good. There was much duplication and at the same time numerous gaps at crucial points, finally there was a total lack of general plan. The embarrassment which this caused with the growth of the country and the increasing complexity of its problems will be appreciated."

ORGANIZATION OF THE DOMINION BUREAU OF STATISTICS.

The Working Constitution of the Bureau.

The Act makes the Bureau responsible for the statistics "relative to the commercial, industrial, social, economic and general activities and conditions of the people,"—a universal mandate. Certain statistics, however, originate as by-products in particular departments, or can best be collected through the field staffs or other machinery of such departments. These should not only meet the requirements of the departments in question, but should constitute an integral part of the general system. The Act accordingly assigns to the Bureau the further task of "collaborating with all other departments of the Government in the compilation and publication of statistical records of administration." The machinery for this collaboration is provided by a Regulation dated October 12, 1918, which gives the Dominion Statistician direct access to heads of departments for conference purposes, with an instruction after such conference to prepare a recommendation for Council, such recommendation on approval to constitute a permanent arrangement governing the particular subject dealt with. A further Regulation provides for central machine compilation as an adjunct to the system. In this way the Bureau is constituted as a comprehensive central statistical office, working for the most part under the Governor in Council, all purely statistical work having been brought by transfer under its immediate direction, whilst remaining departmental statistics are indirectly controlled.

Control over Provincial statistics (which, under the B.N.A. Act, include some most important subjects) is secured through a clause permitting Provincial officers to serve as agents under the Statistics Act. A further clause gives the Bureau right of access to all Provincial, municipal or corporation records.

The Purpose of Statistical Centralization.

The purpose of statistical centralization includes, of course, the numerous economies in "overhead" which concentration promotes, as in staff, equipment, elimination of duplication, etc. For example, two pronounced characteristics of statistical work are (a) the large proportion of routine, and (b) its ebb and flow; a "floating" staff is accordingly a feature of a central bureau. The use of electrical tabulating machinery, again, has revolutionized statistical work, but it effects an economy only on large-scale (i.e., centralized) operations. (The Bureau has an investment of over $125,000 in machinery.) Central library, record, and administration systems are further examples. Still another economy, from a different angle, flows from the concentration of statistical experience, as a result of the bringing together of the higher statistical officers of the government. The convenience of the public is also promoted by having statistics all in one place.

But the fundamental purpose of statistical centralization lies in the fact that its great subjects, such as production, trade, finance, population, etc., are not separate and distinct, but are closely interrelated. The state, in other words, is not a series of heterogeneous

activities, but is itself an entity. The statistics of the country must therefore be framed to illustrate these relationships. For example, if the statistics of mines, fisheries, manufactures, and other phases of production are carried out in a series of water-tight compartments, the phenomena common to all, such as labour, capital equipment, etc., will inevitably be handled differently, with non-comparable results. Again, if one system of classifying commodities is employed by the Trade Statistician, another by the Production Statistician, and another by the Prices Statistician, no general study of conditions surrounding a particular group of commodities can be made; similarly, the classification of occupations should be uniform, whether in the Census analysis of population, in the vital statistical record of deaths, in criminal and in labour statistics, and so on. Again, on points of method like the construction of index numbers—clearly such devices should yield results that are comparable from field to field. In brief, a true national statistic is not a mere aggregation of the statistics of different activities, but involves also a purview of the totality of phenomena with the object of revealing their interplay, and, if possible, the controlling forces from time to time. Not only should the State be provided with statistics on the main subjects of national interest, but these statistics should be properly "articulated" with each other, so as to form in as far as possible a single conspectus.

Progress under the Bureau to Date.

The Bureau has completed the plans for a unified, nationwide statistical system, covering every important phase of social and economic activity, and has carried them out to a considerable degree, though part is not yet realized. The First Annual Report of the Dominion Statistician contained a full description of the organization of the Bureau and of its subject-matter. The chart on page 827 is from that report, and shows the eleven main branches under which the work of the Bureau is conducted. A list of the publications is also attached as further indicating its scope.

In briefest form, the chief reorganizations effected to date are as follows (a complete memo as to policies involved in each case being contained in the Report above mentioned):

(1) The Census (decennial and quinquennial) has been reorganized as a stock-taking of the people and their basic industry, and its true place as such in the national statistical system and in relation to other fields of statistics determined; it has been considerably simplified as a result of the Bureau's widened control of allied statistics.

(2) A national scheme of vital statistics, made possible by inducing the provinces to enact uniform legislation drafted by the Bureau, and to accept uniform administration of the same and on standard forms issued by the Bureau, has been established.

(3) The monthly and annual statistics of agriculture (crop reports, live stock, etc.) have been brought under joint operation of the Bureau and the nine Provincial Governments, to the material improvement of these data.

(4) The statistics of fisheries, mines, forestry, dairying, central electric power and manufactures have been unified and placed on an annual basis (Industrial Census) in co-operation with the several Dominion and Provincial Departments concerned; altogether the statistical activities of over 30 Departments, have been brought into harmony. In conjunction with (3) this provides comprehensive and up-to-date information on all phases of production.

(5) The statistics of foreign trade and of transportation and communications have been completely re-modelled; in trade statistics a saving of $25,000 a year has been effected, whilst the scope of the data and the efficiency of the service has been greatly increased.

(6) A Branch dealing with the more important aspects of internal trade, including interprovincial movements, the marketing of staple commodities (grain, livestock, fruits, etc.), and a complete system of prices statistics has been established.

(7) Criminal Statistics have been reorganized and co-ordinated with the Census and other social statistics.

(8) Substantial beginnings have been made in the comprehensive treatment of public finance and of education—the latter in collaboration with the nine Provincial Governments.

(9) Relations between the Bureau and the Department of Labour have been reduced to a formal arrangement.

(10) The Canada Year Book, as a digest of general statistics, has been continuously improved.

(11) A library of the statistics of all countries has been established, and a central mechanical tabulation service for other departments has been put in operation.

The main achievement of the Bureau, however, has been in the organization of these several subjects in correlation with each other in accordance with a general plan, and the consequent establishment of a comprehensive viewpoint of the country as a "going concern". In addition, there has been created what is frequently called a central "thinking office" in statistics, continuously in touch with general conditions and the line of probable developments.

Conclusion.

The final concept in the organization of the Bureau of Statistics is that of a national laboratory for social and economic research. Statistics are not merely a record of what has been, but are for use in planning what shall be; it is the duty of a statistical bureau to assist directly in the day-to-day problems of administration, as well as to provide their theoretic background. The action of several large universities in establishing research departments, and the endowment of the National Bureau of Economic Research in the United States are suggestive in this regard. In Germany, the Central Statistical Department has been for many years one of the most powerful engines of Government, its organization permeating the country, embracing 17 subsidiary state bureaus and 45 municipal offices. One of the

most significant of recent developments in administration is the extent to which statistical organization has been increased as a guide to national policy. Though its usefulness is only begun, the Dominion Bureau of Statistics has laid the foundations for a service of the first rank, comparable with the increasingly important position taken by Canada in the economic and political world.

Publications of the Dominion Bureau of Statistics.

The Dominion Bureau of Statistics is organized in the following Branches, namely: I. Administration; II. Demography—Census and Vital Statistics; III. Agricultural Statistics; IV. Fisheries, Furs and Dairy Products; V. Mining, Metallurgical and Chemical; VI. Forestry and allied industries; VII. General Manufacturers; VIII. External Trade (Imports and Exports); IX. Internal Trade; X. Transportation; XI. Financial Statistics; XII. Statistics of Administration of Justice; XIII. Education Statistics; XIV. General Statistics. The publications of the several Branches are as follows:

ADMINISTRATION—

Annual Report of Dominion Statistician.

DEMOGRAPHY—

Census.—

Bulletins of the Sixth Census of Canada, 1921. (A bulletin on the Population and area of each Province by Electoral districts, Cities, Towns and Villages, with a summary of rural and urban.) The reports of the 1921 census will include two volumes on population and one on agriculture. A bulletin on the agriculture of each province will also be issued.

Reports of the Fifth Census of Canada, 1911: Vol. I. Areas and Population by Provinces, Districts and Subdistricts, with Introduction, Tables 1 to XV, pp. i-viii, 1-623. Vol. II. Religions, Origins, Birthplace, Citizenship, Literary and Infirmities by Provinces, Districts and Subdistricts, with Introduction. Tables I-XLVI, pp. i-iv, 1-634. Vol. III. Manufactures for 1910 as enumerated in June, 1911, with Introduction. Tables I-XX, pp. i-xvi, 1-432. Vol. IV. Agriculture, with Introduction. Tables 1-90, I-XXXV, pp. i-xcv, 1-428. Diagrams 5 pp. Vol. V. Forest, Fishery, Fur and Mineral Production, with Introduction. Tables 1-51, I-XXVI; pp. i-l, 1-171. Vol. VI. Occupations of the People, with Introduction. Tables 1-25, I-VI, pp. i -xxxi,1-469.

Bulletins of the Fifth Census of Canada, 1911: Manufactures of Canada—Dairy Industries—Agriculture, Prince Edward Island—Agriculture, Nova Scotia—Agriculture, New Brunswick—Agriculture, Quebec—Agriculture, Ontario—Agriculture, Manitoba—Agriculture, Saskatchewan—Agriculture, Alberta—Agriculture, British Columbia—Religions—Origins of the People—Birthplace of the People—Educational Status—Mineral Production—Infirmities—Ages—School Attendance.

Special Report of the Foreign-born Population. (Abstracted from the Records of the Fifth Census of Canada, June, 1911, 23 tables, 62 pp., 1915.)

Report of the Census of Population and Agriculture of the Prairie Provinces, 1916. Tables 1-54; I-XXVI, pp. i-lxiv, 1-356.

Vital Statistics.—Annual Report on Vital Statistics of Canada by provinces and municipalities. Monthly Report of Births, Marriages and Deaths, by provinces. Report of Conference on Vital Statistics, held June 19-20, 1918, pp. 1-48. (*Out of print.*)

PRODUCTION—

I. General Summary of Production.—

Including (1) Primary Production (Agriculture, Fishing, Furs, Forestry and Mining), and (2) Secondary Production, or General Manufactures.

II. Agriculture.—

(1) Monthly Bulletin of Agricultural Statistics. (Contains monthly reports on agricultural conditions, prices, weather, etc.—preliminary, provisional and final estimates of areas, yields, quality and values of field crops—numbers and values of farm live stock, poultry, etc.—fruit statistics—stocks of grain—annual summary of agricultural production—international agricultural statistics.) (2) Advance Summaries of Agricultural Statistics. (The more important statements from the Bulletin in mimeographed form.)

III. Furs.—

(1) Annual Report on Fur Farms. (2) Annual Report on the Production of Raw Furs.

IV. Fisheries.—

(1) Annual Report of Fisheries Statistics. (2) Advance Summary of Fish caught, marketed and prepared.

V. Forestry.—

(1) Annual summary of the value, etc., of forest production. (Covers operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber; production of poles and cross ties, and farm production (decennial) of fire wood, posts, etc.)

VI. Mineral Production: (Mining and Metallurgy).—

(1) General Reports: (a) Annual Report on the Mineral Production of Canada; (b) Preliminary Reports (semi-annual) on the Mineral Production of Canada. (2) Coal: (a) Annual Report on Coal Statistics for Canada; (b) Monthly Report on Coal Statistics for Canada. (3) Annual Bulletins on the following subjects: (a) Gold Production; (b) Silver Production; (c) Copper Production; (d) Nickel Production; (e) Lead Production; (f) Zinc Production; (g) Copper-Gold-Silver Industry; (h) Auriferous Quartz Mining Industry; (i) Placer and Hydraulic Gold Mining Industry; (j) Nickel-Copper Industry; (k) Silver-Cobalt-Nickel Industry; (l) Silver-Lead-Zinc Industry; (m) Miscellaneous Non-Ferrous Metals, including Antimony, Molybdenite and Tungsten; (n) Asbestos Industry; (o) Feldspar Industry; (p) Graphite Industry; (q) Mica and Phosphate Mining Industries; (r) The Salt Industry; (s) Miscellaneous Non-Metallic Minerals, including Actinolite, Barytes, Chromite, Corundum, Fluorspar, Magnesite, Magnesium, Sulphate, Manganese, Mineral Pigments, Mineral Waters, Natro-alunite, Peat, Pyrites, Quartz, Sodium, Sulphate and Talc; (t) Stone Quarrying Industry; (u) Sand and Gravel Industry; (v) Portland Cement Industry; (w) Miscellaneous Clay Products, including clay sewer pipe, Brick and Tile, Stoneware and Pottery, Fire Brick and Fire Clay, Kaolin and other Clays.

VII. Manufactures:—

(1) General Summary, by Provinces and leading cities—(industrial groups classified by component materials, purpose, etc.—comparative statistics.)

(2) Manufacture of Vegetable Products—general report. Special Bulletins as follows: (a) Coffee and Spices; (b) Cocoa and Chocolate; (c) Fruit and Vegetable Preparation, including canning, evaporating and preserving; (d) Pickles, Sauces, Vinegar and Cider; (e) Flour and Cereal Mills; (f) Bread and other bakery products; (g) Biscuits and Confectionery; (h) Macaroni and Vermicelli; (i) Liquors, distilled; (j) Liquors, Malt; (k) Liquors, Vinous; (l) Rubber Goods and Rubber Boots and Shoes; (m) Starch and Glucose; (n) Sugar Refineries; (o) Tobacco Products; (p) Linseed Oil and Oil Cake.

(3) Animal Products and their manufactures—general report. Special Bulletins as follows: (a) Dairy Products; (b) Slaughtering and Meatpacking; (c) Fish and Fish Products; (d) Leather Tanneries; (e) Harness and Saddlery; (f) Leather Boots and Shoes; (g) Leather Goods; (h) Leather Gloves and Mitts.

(4) Textile and Allied Industries—general report. Special Bulletins as follows: (a) Cotton Textiles (Cloth, yarn, thread and waste); (b) Woollen Textiles (Cloth, yarn, blankets, felt and waste); (c) Silk Mills; (d) Clothing (Men's and women's factory and custom); (e) Hats, Caps and Furs; (f) Hosiery and Knit Goods; (g) Neckwear (Men's and Women's) and Fancy Goods; (h) Oiled Clothing and Waterproofs; (i) Corsets; (j) Carpets, Rugs and Mats; (k) Cordage, Rope and Twine.

(5) Manufactures of Wood and Paper Products—general report. Special Bulletins as follows: (a) Lumber, Lath and Shingle Industry (containing a statistical survey of Operations in the Woods contingent to this industry); (b) Pulp and Paper; (c) Cooperage; (d) Planing Mills, Sash and Door Factories; (e) Printing, Bookbinding, Publishing, Lithographing and Engraving, Stereotyping and Electrotyping, Maps and Blue Prints; (f) Furniture; (g) Carriages, Wagons, and Sleighs, and materials thereof; (h) Canoes, Rowboats and Launches; (i) Coffins and Caskets; (j) Containers—Boxes and bags (paper); boxes and packing cases (wood); baskets and crates; woodenware.

(6) Iron and Its Products—General Report. Special Bulletins as follows: (a) Blast Furnaces and Steel Mills (annual); (b) Foundries and Machine Shops; (c) Iron and steel fabrication; (d) Machinery; (e) Boilers and Engines; (f) Agricultural Implements; (g) Motors and Cycles; (h) Railway Equipment; (i) Heating and Ventilating appliances; (j) Wire and wire goods; (k) Sheet Metal Products.

(N.B. A Monthly Report on the Production of Iron and Steel is issued.)

(7) Manufactures of Non-Ferrous Metals—General report. Special Bulletins as follows: (a) Aluminium Products; (b) Brass and Copper Products; (c) Lead, Tin and Zinc Products; (d) Manufactures of precious metals; (e) Electrical apparatus.

(8) Manufactures of Non-Metallic Minerals—general report. Special Bulletins as follows: (a) Aerated Waters; (b) Asbestos and Allied Products; (c) Coke and Gas; (d) Glass and its Products; (e) Graphite Products; (f) Petroleum Products; (g) Stone Products; (h) Abrasives.

(9) Chemical and Allied Products—general report. Special Bulletins as follows: (a) Coal Tar and Its Products; (b) Explosives, Ammunition, Fireworks and Matches; (c) Fertilizers; (d) Medicinal and Pharmaceutical preparations; (e) Pigments, Paints and Varnishes; (f) Soap, Perfume, Cosmetics and Toilet preparations; (g) Inks, Dyes and Colour compounds; (h) Wood distillation and extracts.

(10) Miscellaneous Manufactures. Special Bulletins as follows: (a) Brooms and Brushes; (b) Musical Instruments (including pianos and organs, and phonographs); (c) Musical Instrument Materials and Parts; (d) Buttons; (e) Trunks and Valises.

(11) Summary Reports on Groups of Industries, classified according to the use or purpose of their principal product as follows: (a) Food; (b) Clothing; (c) Drink and Tobacco; (d) Personal and Household Goods; (e) Books; (f) Equipment; (g) Materials for further manufacture.

VIII. Construction. (a) The Building and general construction industry; (b) Railway, Telephone and Telegraph—Construction, Maintenance of Way and Repairs; (c) Government and Municipal Construction; (d) The Bridgebuilding Industry; (e) The Shipbuilding Industry; (f) Building Permits—Monthly Record.

EXTERNAL TRADE (IMPORTS AND EXPORTS)—

Annual Report of the Trade of Canada; Monthly Report of the Trade of Canada; Monthly Summary of Trade Statistics.

INTERNAL TRADE—

Grain.—

Annual Report on the Grain Trade of Canada; Weekly Report on the Grain Trade; Monthly Report on Mill Grind.

Live Stock, etc.—

Annual Report on Live Stock and Animal Products; Monthly Report on Stocks in Cold Storage; Quarterly Report on Visible Supply of Hides and Skins.

Price Statistics (Pending).—

Producers' Prices; Wholesale and Jobbers' Prices; Retail Prices; Municipal Market Prices; Prices of Securities; Prices of Services.

Other—

Monthly Report of Visible Supply of Raw and Refined Sugar.

TRANSPORTATION, COMMUNICATION AND PUBLIC UTILITIES—

Railways and Tramways.—

Annual Report on Railway Statistics; Monthly Bulletin *re* Railway Revenues, Expenses, Incomes and Operating Statistics; Monthly Statement *re* Traffic of Railways.

Express.—

Annual Report on Express Statistics.

Telegraphs.—

Annual Report on Telegraph Statistics.

Telephones.—

Annual Report on Telephone Statistics.

Water Transportation—

Report of Census of Canadian Registered Ships; Annual Report on Canal Statistics; Monthly Report on Canal Statistics; Annual Report on Navigation.

Electric Stations.—

Central Electric Stations in Canada.

FINANCE—

Annual Report on Provincial Finance; Annual Municipal Statistics of Cities of 10,000 population and over; Annual Municipal Statistics of Urban Municipalities of 3,000 to 10,000 population; Annual Municipal Statistics of Urban Municipalities of 1,000 to 3,000 population.

JUSTICE—

Annual Report on Criminal Statistics.

EDUCATION—

Report of Conference on Education Statistics, held October 27-28, 1920; Historical Statistical Survey of Education in Canada; Annual Report on Education Statistics (in press).

GENERAL—

The Canada Year Book, 1920, with Map of Canada and Newfoundland, a Statistical Summary of the Progress of Canada, and maps and diagrams, pp. i-xviii, 1-768.

Contents: 1. Reconstruction in Canada, by S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F. R. Econ. Soc., Editor Canada Year Book, Dominion Bureau of Statistics, Ottawa. II. Chronological History of Canada. III. Physical Characteristics of Canada including Geographical Features; Economic Geology, 1919, by Wyatt Malcolm, Department of Mines, Ottawa. IV. Area and Population. V. Education. VI. Climate and Meteorology. VII. Production. VIII. Trade and Commerce. IX. Transportation and Communications. X. Labour, Wages and Prices. XI. Finance. XII. Administration. XIII. Legislation and Principal Events of the Year, 1920. XIV. Extracts from the Canada Gazette.

List of the Principal Acts of Parliament administered by Departments of the Government of the Dominion of Canada, as compiled from information supplied by the respective Departments.

(Numbers within parentheses denote the chapter of the Revised Statutes of Canada, 1906—R.S.C., 1906.)

Justice.—Department of Justice (21); Solicitor General's (22); Northwest Territories (62); Yukon (63); Dominion Police (92); Judges (138); Supreme Court (139); Exchequer Court (140); Admiralty (141); Petition of Right (142); Criminal Code (146); Penitentiary (147); Prisons and Reformatories (148); Identification of Criminals (149); Ticket of leave (150); Fugitive Offenders' (154); Extradition (155); Juvenile Delinquents (7-8 Edw. VII, c. 40, 1908); Bankruptcy, (c. 36, 1919).

External Affairs.—The functions and duties of this Department are defined by the Department of External Affairs Act, 1912 (2 Geo. V, c. 22) and by the International Boundary Waters Treaty Act (1-2 Geo. V, 1911, c. 28), as amended by the statute of April 3, 1914 (4 Geo. V, c. 5).

Customs and Inland Revenue.—Customs Tariff; Customs; Canada Shipping (in part); Infectious and Contagious Diseases affecting Animals (in part); Destructive Insect and Pest (in part); Export; Copyright (in part); Petroleum and Naphtha; Inland Revenue; Special War Revenue, 1915.

Post Office.—Post Office; Government Annuities; Pacific Cable; Parcel Post; Special War Revenue (in part).

Agriculture.—Experimental Farm Stations; Inspection and Sale, Part IX (Fruit and Fruit Marks); Dairy Industry; Cold Storage; Cold Storage Warehouse; Oleomargarine; Milk Test; Seed Control; Feeding Stuffs; Live Stock Pedigree; Live Stock and Live Stock Products; Animal Contagious Diseases; Meat and Canned Foods; Destructive Insect and Pest; Agricultural Instruction; Dairy Produce Act; Fertilizers Act.

Interior.—Department of the Interior; Dominion Lands; Dominion Lands Surveys; Forest Reserves and Parks; Irrigation; Railway Belt; Railway Belt, Water; Yukon; Yukon Placer Mining; Dominion Water Power; Land Titles; Northwest Game; Northwest Territories; Ordnance and Admiralty Lands; Reclamation; Seed Grain; Migratory Birds Convention Act.

Health.—Quarantine Act (74); Adulteration Act (133); Public Works Health Act (135); Leprosy Act (136); Canada Shipping Act (in part) (113); Proprietary or Patent Medicines Act (7-8 Edw. VII, c. 56); Opium and Narcotic Drug Act; an Act respecting Food and Drugs; an Act respecting Honey; an Act respecting Maple Products.

Finance.—Department of Finance and Treasury Board; Appropriation; Superannuation and Retirement; Contingencies; Consolidated Revenue and Audit; Currency; Ottawa Mint; Dominion Notes; Provincial Subsidies; Bank; Savings Bank; Penny Bank; Quebec Savings Banks; Loan Companies; Trust Companies; Bills of Exchange; Interest; The Special War Revenue Act, 1915, and amendments, 1920 (in part); The Business Profits War Tax Act, 1916, and amendments; Income Tax Act, 1917 and 1918 and amendments; Finance Act; Ottawa Improvement Commission Act.

Militia and Defence.—Militia Act; Royal Military College Act; Militia Pension Act; Sections 85 and 86 of the Criminal Code; the Air Board Act; Army Act; Regimental Debts' Act.

Public Works of Canada.—Public Works (39) and amendments (8-9 Geo. V, 1918, c. 37); Government Harbours and Piers, s. 5 (112); Navigable Waters Protection, s. 7 (115) and amendments (8-9 Geo. V, 1918, c. 33); Telegraph Secrecy (126); Dry Dock Subsidies (9-10 Edw. VII, 1910, c. 17); An Act to amend the Navigable Waters Protection Act (9-10 Edw. VII, 1910, c. 44); An Act to authorize the payment of a subsidy to the Collingwood Shipbuilding Co., Ltd., (2 Geo. V, 1912, c. 17); An Act to amend the Dry Dock Subsidies Act, 1910 (2 Geo. V, 1912, c. 20); An Act to amend the Government Works Toll Act, R.S.C., 1906, c. 40, (2 Geo. V, 1912, c. 26); An Act to incorporate the National Gallery of Canada (3-4 Geo. V, 1913, c. 33); An Act to authorize the payment of a subsidy to the Western Dry

Dock and Shipbuilding Co., Ltd., (3-4 Geo. V, 1913, c. 57); Acts to amend the Dry Dock Subsidies Act, 1910 (4-5 Geo. V, 1914, c. 29, 7-8 Geo. V, 1917, c. 27 and 9-10 Geo. V, 1919, c. 51); Act to confirm an agreement between His Majesty the King and the Corporation of the City of Ottawa, (10-11 Geo. V, chap. 15); Ferries Act, R.S.C., 1906, c. 108; transferred by Order in Council 3rd June, 1918, for administration by Public Works Department.

Trade and Commerce.—Canada Grain; Electricity and Fluid Exportation; Electric Light Inspection; Electrical Units; Fertilizers; Gold and Silver Marking; Gas Inspection; Inspection and Sale; Inspection of Water Meters; Lead Bounties; Petroleum Bounty; Statistics; Timber Marking; Weights and Measures Inspection; Zinc Bounties.

Labour.—Conciliation and Labour (96); Industrial Disputes Investigation (6-7 Edw. VII, 1907, c. 20); Fair Wages Resolution of the House of Commons; Employment Offices Co-ordination Act (8-9 Geo. V, c. 21); The Technical Education Act (9-10 Geo. V, c. 73).

Secretary of State.—Companies; Naturalization; Canada Temperance; Boards of Trade; Trade Unions; War Charities, 1917.

Naval Service.—Naval Service (9-10 Edw. VII, 1910, c. 43); Naval Discipline (8-9 Geo. V, c. 34).

Railways and Canals.—Department of Railways and Canals (35); Government Railways (36); Intercolonial and P.E.I. Railway Employees' Provident Fund (6-7 Edw. VII, c. 22); The Government Railways Small Claims (9-10 Edw. VII, c. 26) and amendments to foregoing Acts; Acts to amend the National Transcontinental Railway Act (4-5 Geo. V, c. 43 and 5 Geo. V, c. 18) and to amend the Government Railway Act and authorize the purchase of certain Railways (5 Geo. V, c. 16); An Act to incorporate Canadian National Railway Company and respecting Canadian National Railways (9-10 Geo. V, c. 13) and amending Act, (10-11 Geo. V, c. 39); An Act to provide Compensation where employees of His Majesty are killed or suffer injuries while performing their duties (8-9 Geo. V, c. 15 and amending Act 9-10 Geo. V, c. 14); the Canada Highways Act (9-10 Geo. V, c. 54); the acquisition of the preference and common stock of the Grand Trunk Railway Company of Canada (10 Geo. V, c. 17, 10-11 Geo. V, c. 13 and 11-12 Geo. V, c. 9).

The Railway Act, 1919, (Companies) (9-10 Geo. V, c. 68) confers certain powers upon the Minister of the Department. In the case of subsidized Railways the authorizing Acts are carried out under the Department, which has also certain jurisdiction where Government guarantee has been given.

Marine.—Department of Marine and Fisheries; Government Vessels Discipline; Government Harbours and Piers; Canada Shipping and amending Acts (6-7 Geo. V, cc. 12 and 13); Navigable Waters Protection; Quebec Harbour and River Police; Live Stock Shipping; An Act to amend the Vancouver Harbour Commissioners' Act (6-7 Geo. V, c. 9); An Act transferring Rights and Powers in Harbour of St. John, N.B., to a Board of three Commissioners approved by Order in Council; The Vancouver Harbour Advances Act, 1919; An Act fixing the rate of interest to be paid on loans by His Majesty to the Harbour Commissioners of Montreal and Quebec; An Act to amend the Canada Shipping Act (Transfers and Mortgages of Ships), passed during session of 1919-20; Canada Shipping Acts (10-11 Geo. V, cc. 5, 6, 23, 38 and 70) relating respectively to certificates of service, steamboat inspection, pilotage, sick and diseased mariners and shipbuilding; An Act to extend the time for the payment of certain debentures issued by the Harbour Commissioners of Montreal (11-12 Geo. V, c. 11); an Act to amend the Canada Shipping Act (11-12 Geo. V, c. 19); an Act respecting the Lake of the Woods and other waters (11-12 Geo. V, c. 38).

Indian Affairs.—The Indian Act, 1906, with amendments to date.

King's Printer and Controller of Stationery.—Public Printing and Stationery (80) (10 Geo. V, c. 27, 1919).

Mines.—Geology and Mines (6-7 Edw. VII, 1907, c. 29); Explosives (4-5 Geo. V, 1914, c. 31).

List of Principal Publications of the Departments of the Government of the Dominion of Canada, as compiled from information supplied by the respective Departments.

Customs and Inland Revenue.—Annual Report containing Tables of Imports, Exports, Customs and Inland Revenue. Annual Report of Shipping.

Post Office.—Annual Report of the Postmaster General. Official Postal Guide. Regulations as to parcel post, rural mail delivery and government annuities.

Agriculture.—The Agricultural Gazette of Canada, subscription, $1 per year (monthly). Annual Reports of the Minister, of the Experimental Farms and Stations, of the Dairy and Cold Storage Commissioner, of the Veterinary Director General and of the Entomological Branch. Bulletins, pamphlets, circulars and Seasonable Hints of the Experimental Farms Branch on a great variety of agricultural subjects, including publications of the following nine divisions: Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botany; Poultry and Tobacco. Guides to the Experimental Farms and Stations. Bulletins of the Dairy and Cold Storage Branch relating to the history of the dairying and cold storage industry in Canada; the making of butter and cheese, cow testing, dairying experiments, co-operation, etc. Reports, bulletins, pamphlets, etc., of the Live Stock Branch, on cattle, sheep, swine, poultry, marketing of eggs, wool, etc. Bulletins of the Health of Animals Branch, with regulations as to contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; maladie du coit; tuberculosis; foot-and-mouth disease; quarantine and meat inspection. Bulletins and Reports of the Seed Branch as to Seed-testing, the production and use of seed grains and the Seed Control Act. Bulletins and circulars of the Entomological Branch and instructions to importers of nursery stock. Reports of the Canadian Seed Growers' Association. Fodder and Pasture Plants, by George H. Clark, B.S.A., and M. Oscar Malte, Ph.D., 143 pages, 27 plates, price 50 cents. Bulletin on the Maple Sugar Industry; Agricultural Instruction Act; Publications Filing System.

Dominion Experimental Farms.—(1) Report of the Director (contains summary of reports of Divisions, Farms and Stations); (2) Animal Husbandry Division; (3) Bee Division; (4) Botany division; (5) Chemistry Division; (6) Field Husbandry Division; (7) Illustration Stations Division; (8) Poultry Division; (9) Tobacco Division; Experimental Farm Reports; (10) Agassiz, B.C., (11) Indian Head, Sask., (12) Nappan, N.S., Experimental Stations; (13) Charlottetown, P.E.I.; (14) Invermere, B.C.; (15) Kapuskasing, Ont. and la Ferme, Que.; (16) Kentville, N.S.; (17) Lennoxville, Que,; (18) Ste. Anne de la Pocatière, Que.; (19) Rosthern, Alta.; (20) Lethbridge, Alta.; (21) Lacombe, Alta.; (22) Summerland, B.C.; (23) Experimental Sub-stations:—Beaverlodge, Alta.; Fort Vermilion, Alta.; Grouard, Alta.; Fort Resolution, N.W.T.; Swede Creek, Yukon; Salmon Arm, B.C.

Bulletins.—(24) Bee diseases; (25) Beef Scrap versus Skim Milk for Egg Production; (26) Commercial Feeding Stuffs; (27) Fertilizers for Flowering Plants, Vegetables, Small Fruits and Lawns; (28) List of Publications; (29) Outlook for Dairying and Marketing of Dairy Produce; (30) Swine Husbandry in Canada (3rd Edition); (31) Why and How to Use Milk; (32) Crop Rotation; (33) Potato, its Cultivation and Varieties; (34) Smut, Seed Treatment for; (35) Corn Borer, the Control of; (36) Grasshoppers, The Control of; (37) Homes Beautiful, and How the Farmers May Make Them.

NOTE—The foregoing is a selection from the publications of the Department. A complete list of publications available for distribution is issued, and so long as the supply lasts copies of publications will be sent free on application to the Publications Branch, Department of Agriculture, Ottawa.

Interior.—Annual Report, including Reports from the Dominion Lands, Surveys, Dominion Parks, Forestry, Irrigation and Water Power Branches. Pamphlets, reports, bulletins etc., of the respective branches:—

Topographical Surveys.—(1) Annual Report of the Topographical Surveys Branch, and accompanying maps. Price 5c. (2) Manual of Instructions for the Survey of Dominion Lands. Price 50c. Supplement to the Manual. Price

50c. (3) Rules and Regulations of the Board of Examiners for Dominion Land Surveyors, and programme of the subjects of the various examinations. (4) The Selkirk Range (in two volumes), by A. O. Wheeler, F.R.G.S. Price $1. (5) Copying Camera of the Surveyor General's Office. (6) Photographic Methods Employed by the Canadian Topographical Survey, by A. O. Wheeler, F.R.G.S. (7) Precise Measuring with Invar Wires and the Measurement of the Kootenay Base, by P. A. Carson, D.L.S. (8) Report on Levelling Operations, from 1908 to 1914, by J. N. Wallace, D.L.S. Price 35c. (9) Triangulation of Part of the Railway Belt of British Columbia, by H. Parry, D.L.S. (10) Description, Adjustments and Methods of Use of the 6″ Micrometer Block Survey Reiterating Transit Theodolite, by W. H. Herbert, B.Sc. (11) Papers on Descriptions for Deeds. (12) Description of the townships surveyed in the different Provinces, issued yearly since 1909. (13) Description of the surveyed townships in the Peace River District. (14) Descriptions of lands comprised within the Fort Pitt Sectional Map, consisting of townships 49 to 56, ranges 15 to 28, west of the third meridian. (15) Description of Surveyed Lands in the Railway Belt of British Columbia (in three parts). (16) Extracts from Reports on townships east of the principal meridian, received from surveyors to July 1, 1914. (17) Extracts from Reports on townships 1 to 16 west of the principal meridian, received from surveyors to July 1, 1914. (18) Extracts from Reports on townships 17 to 32 west of the principal meridian, received from surveyors to July 1, 1914. (19) Extracts from Reports on townships 33 to 88 west of the principal meridian, received from surveyors to March 31, 1915. (20) Extracts from reports on townships 1 to 16 west of the second meridian received from surveyors to March 31, 1915. (21) Explanation of the Astronomical Field Tables for the use of the Land Surveyors of Canada. (22) Tests of small telescopes at the Laboratory of the Dominion Lands Survey . (23) Alberta and British Columbia Boundary, Part 1, 1913 to 1916, Price 50c. Report and Atlas, $1. (24) Description of, and Guide to Jasper Park, 50 cents. (25) The Testing of Aneroid Barometers at the Laboratory of the Dominion Lands Survey. (26) Testing of timepieces at the Laboratory of the Dominion Lands Survey. (27) Description of Boundary Monuments erected on surveys of Dominion Lands 1871-1917, by H. L. Seymour, D.L.S.; (28) Standardization of Measures of length at the Laboratory of the Dominion Lands Surveys; (29) The Testing of Thermometers at the Laboratory of the Dominion Lands Surveys; (30) Drought and summer frosts in Western Canada, by W. H. Herbert, B.Sc.; (31) Descriptions of townships between the third and fourth meridians, 1886; (32) Descriptions of the townships west of the fourth and fifth meridians, 1886.

Maps.—(33) Township Plans, Price 10c. (34) Plans of Parishes, Townplots and Settlements, 25c to $1.00; (35) Sectional maps of Western Provinces and Yukon Territory, price 5c; (36) New style sectional maps in greater detail showing roads, telephones, buildings, price 25c; (37) Mount Robson and mountains north of Yellowhead pass; (38) Banff and vicinity; (39) Central part of Jasper Park in 6 sheets, price 15c per sheet; (40) Map of the same area in 1 sheet; (41) Crowsnest forest and Waterton Lakes Park in 5 sheets; (42) Waterton Lakes Park; (43) Magnetic maps; (44) Alberta—British Columbia boundary maps, 10c per sheet; (45) Land classification maps of Peace river, St. Paul de Metis, and Prince Albert districts; (46) Mining districts of Rice lake, price 5c., and Flinflon lake, price 15c. (47) Northern Selkirk mountains and the Big Bend of the Columbia; (48) Mackenzie and Slave rivers. (Publications of the Topographical Surveys Branch may be obtained on application to the Distribution Office, Department of Public Printing and Stationery for No. 1; to the Secretary, Board of Examiners for Dominion Land Surveyors, for No. 3, and to the Surveyor General for the other Nos.)

Dominion Observatory.—Observations of Dominion Observatory, Vol. 4: No. 14, Orbit of the Spectroscopic Binary Boss 3511, by W. E. Harper, M.A.; No. 15, Orbit of the Spectroscopic Binary 19 Lyncis, by W. E. Harper; No. 16, Orbit of the Spectroscopic Binary h Draconis, by W. E. Harper; No. 17, Measures of the Radial Velocities of Fourteen Stars, by J. B. Cannon, M.A.; No. 18, The New Star in the Constellation Aquila, by W. E. Harper; No. 19, Geminorum, A Long Period Binary, by W. E. Harper; No. 20, Measures of Radial Velocity of 23 Comae Berenices, Serpentes and Serpentes, by W. E. Harper; No. 21, Measures of Radial Velocity of Cassiopeiæ, Persei, 69 Tauri and Cygni, by W. E. Harper ; No. 22, Radial Velocities of 30 Stars, by W. E. Harper. Vol. 5, No. 1, A Spectrographic

Study of Early Class B Stars, by F. Henroteau, Ph.D., and J. P. Henderson, M.A. Publications of the Dominion Observatory, Vol. V, No. 2, the Effect of Cooling on a Cement Pier, by Ernest A. Hodgson, M.A. ; Vol. V, No. 3, A Spectroscopic Study of Early Class B Stars, Second Paper, by F. Henroteau, Ph.D.; Vol. V, No. 4. The Location of Epicenters, 1917-18, by Ernest A. Hodgson, M.A.; Vol. V, No. 5, Magnetic Results, 1907-20, by C. A. French, M. A.; Vol. V, No. 6, Astronomical Positions in Canada, by R. Meldrum Stewart, M.A.; Vol. V, No. 7, A Spectroscopic Study of Sigma Scorpii, by F. Henroteau, Ph.D. (See also 1919 Year Book, pp. 630-631.)

Reclamation.—Irrigation Reports of Irrigation Surveys and Inspections, 1915 to 1920-21; Annual Stream Measurements Reports, 1909 to 1919. Report of the Western Canada Irrigation Association Conventions (1st to 11th Convention); Report of the International Irrigation Congress, 1914. Bulletins; (1) Irrigation in Saskatchewan and Alberta; (2) Alfalfa Culture; (3) Climatic and Soil Conditions in C. P. Ry. Co's Irrigation Block; (4) Duty of Water Experiments and Farm Demonstration Work; (5) Farm Water Supply. Pamphlets; Address by Mr S. G. Porter on "Practical Operation of Irrigation Works." Address by Dr. Rutherford on "Inter-dependence of Farm and City." Addresses by Mr. Don H. Bark on "The Actual Problem that confronts the Irrigator," "Practical Irrigation Hints for Alberta," and "Alfalfa Growing."

Dominon Water Powers.—Annual Reports for 1912-13 to 1919-21. The Annual Reports of the Branch previous to 1913 are included in the Annual Report of the Department. Water Resources Papers; (1) Report of the Railway Belt Hydrometric Survey for 1911-12, by P. A. Carson; (2) Report of Bow River Power and Storage Investigations, by M. C. Hendry; (3) Report on Power and Storage Investigations, Winnipeg River, by J. T. Johnston; (4, 19, 22, 24 and 26) Annual Reports of the Manitoba Hydrometric Survey for 1912 to 1919, by M. C. Hendry (to 1918), and by C. H. Attwood, (1919); (5 and 11) Preliminary and final Report on the Pasquia Reclamation Project, by T. H. Dunn; (6) Report on Cost on Various Sources of Power for Pumping in connection with South Saskatchewan Water Supply Diversion Project, by H. E. M. Kensit; (7) Report on the Manitoba Water Powers, by D. L. McLean, S. S. Scovil and J. T. Johnston; (8, 14, 18, 21, 23 and 25) Annual Reports of the British Columbia Hydrometric Survey for 1913 to 1919, R. G. Swan; (10) General Guide for Compilation of Water Power Reports of Dominion Water Power Branch, prepared by J. T. Johnston; (12) Report on Small Water Powers in Western Canada and Discussions of Sources of Power for the Farm, by A. M. Beale; (13) Reports on the Coquitlam-Bountzen Hydro-Electric Development ,by G. R. G. Conway; (16) Report of the Water Powers of Canada. A series of five pamphlets prepared for distribution at the Panama-Pacific Exposition, 1915, by G. R. G. Conway, P. H. Mitchell, H. G. Acres, F. T. Kaelin and K. H. Smith; (17) Canadian Hydraulic Power Development and Electric Power in Canadian Industry, by C. H. Mitchell; (20) Report on the interests dependent on Winnipeg River Power, with special reference to the capital invested and the labour employed, by H. E. M. Kensit; (27) Directory of Central Electric Stations in Canada, to Jan. 1, 1919, by J. T. Johnston; (28) Report of the Dominion Hydrometric Survey covering St. Lawrence and southern Hudson Bay drainage in Ontario, 1919-20, by S. S. Scovil. (29) Report of the Dominion Hydrometric Survey covering the Atlantic drainage south of the St. Lawrence river, including Nova Scotia, New Brunswick, Prince Edward Island and southwestern Quebec, 1919-20, by K. H. Smith; (30) Report of the Dominion Hydrometric Survey covering the Pacific drainage in British Columbia and the Yukon Territory, 1919-20, by R. G. Sevan, continuation of the work contained in the Annual Reports of the British Columbia Hydrometric Survey; (31) Report of the Dominion Hydrometric Survey covering the Arctic and western Hudson Bay drainage (and Mississippi drainage in Canada) in Alberta, Saskatchewan, Manitoba, extreme western Ontario and the Northwest Territories 1919-20, by C. H. Attwood and A. L. Ford, continues the work contained in Annual Reports of the Manitoba Hydrometric Survey; previous to 1919-20 Surveys in Alberta and Saskatchewan were carried on and published by the Reclamation Service, Department of the Interior.

Natural Resources Intelligence.—Maps: Northern Alberta, Southern Alberta, Saskatchewan and Manitoba Land Maps; Cereal Map of Manitoba, Saskatchewan and Alberta; Small Land Map of Manitoba, Saskatchewan and Alberta; Bank Map

of Manitoba, Saskatchewan and Alberta; Bank Map of Ontario and Quebec; Land Registration and Judicial Districts Map of Manitoba, Saskatchewan and Alberta; Resource Maps of Canada, Land District Map of Northern Alberta. Reports: The Unexploited West; Preparing Land for Grain Crops on the Prairies; Handbook for the Information of Intending Settlers; The Lower Athabaska and Slave River District; The Peace River District—Its Resources and Opportunities; The New Manitoba District—a Description of the Resources and Development of the New Mining District of Northern Manitoba; Athabaska to the Bay; The Province of Saskatchewan—a Description of the Resources, Development and Possibilities of the Province; Manitoba, Saskatchewan and Alberta Natural Resources—a Compilation Bearing on the Natural Resources of the Three Provinces; Supplement to Cereal Maps; Facts Regarding the Dominion; Lists of Unoccupied and Uncultivated Lands in Manitoba, Saskatchewan, Alberta, Nova Scotia, New Brunswick and Prince Edward Island; Oil and Gas in Western Canada; Central British Columbia; The Province of New Brunswick; The Natural Resources of Nova Scotia; New Oil Fields of Northern Canada.

Mining Lands and Yukon.—The Yukon Territory, its History and Resources; A two sheet map of Alberta, showing the coal mining rights disposed of; Yukon Placer Mining Act; Yukon Act; Yukon Land Regulations; Yukon Homestead Regulations; Yukon Timber Regulations; Yukon Grazing and Hay Regulations; Quartz Mining Regulations; Coal Mining Regulations; Placer Mining Regulations; Quarrying Regulations; Petroleum and Natural Gas Regulations; Potash Regulations; Dredging Regulations relating to the Yukon Territory; Dredging Regulations relating to beds of rivers outside of the Yukon Territory; Regulations relating to bar-digging on the North Saskatchewan River; Regulations for the issue of oil and gas permits in the Northwest Territories; Alkali Mining Regulations; Regulations for the issue of permits to mine coal for domestic purposes; Regulations for the issue of permits to remove sand stone and gravel from the beds of rivers and lakes.

Dominion Parks.—A Sprig of Mountain Heather; Glaciers of the Rockies and Selkirks; Classified Guide to Fish and their Habitat in the Rocky Mountains Park; The Nakimu Caves; Guide to the Geology of the Canadian National Park on the C.P.R. between Calgary and Revelstoke; Handbook to the Rocky Mountains Park Museum; Livery Tariff for Rocky Mountains Park; Livery Tariff for Yoho Valley; Map of Rocky Mountains Park; Map of Yoho Park; Map of Glacier Park; Map of Revelstoke Park; Map of Buffalo Park; Map of Banff and Vicinity; Through the Heart of the Rockies and Selkirks; Automobile Tariff for Rocky Mountains Park; Automobile Tariff for Yoho Park; Livery Tariff for Glacier Park; Map of Central Part of Jasper Park; Map of Waterton Lakes Park; Migratory Birds Convention Act; Canada's Feathered Friends; No Spring Shooting means more Migratory Game; Protection of Bird Neighbours; Birds of a Manitoba Garden; Birds a National Asset; Bird Houses and their Occupants; Les Oiseaux Amis du Canada; La Prohibition de la Chasse au Printemps assure une plus grande quantité de Gibier Migrateur; La Bernache Commune de la Côte de l'Atlantique; Les Oiseaux Sauvages; Les Ministres de l'Agriculture donnent des Idées sur la Protection des Oiseaux; Les Oiseaux d'un Jardin manitobain.

Forestry.—Annual Reports of the Director of Forestry, 1914 to 1920, inclusive. Bulletins (where number and title are omitted, the document is out of print): (1) Tree Planting on the Prairies; (11) Forest Products of Canada, 1909; Lumber, Square Timber, Lath and Shingles; (14) Cross-ties purchased; (22) Cross-ties; (23) Timber used in Mining Operations; (27) Forest Products of Canada, 1910; Cooperage; Forest Products of Canada, 1911; (34) Lumber, Square Timber, Lath and Shingles; (35) Poles and Cross-ties; (36) Wood-using Industries of Ontario; Forest Products of Canada, 1912; (38) Pulpwood; (39) Poles and Ties; Forest Products of Canada, 1913; (46) Pulpwood Consumption; (48) Lumber, Lath and Shingles; (49) Treated Wood-block Paving; (51) Game Preservation in the Rocky Mountains Forest Reserve; (52) Forest Products of Canada, 1913 (being Nos. 46, 47 and 48); (53) Timber Conditions in the Smoky River Valley and Grand-Prairie Country; Forest Products of Canada, 1914; (54) Pulpwood; Forest Products of Canada, 1915; (58a) Lumber, Lath and Shingles; (58b) Pulpwood; (58c) Poles and Cross-ties; (59) Canadian Woods for Structural Timbers; (60) Canadian Douglas Fir: its mechanical and physical properties; (61) Native Trees of Canada (price

50 cents); (63) Wood-using Industries of Quebec; (65) Forest Products of Canada, 1917; Poles and Cross-ties; (66) Utilization of Waste Sulphite Liquor (price 50 cents); (67) Creosote Treatment of Jack Pine and Eastern Hemlock for Cross-ties; (68) Forest Fires in Canada, 1917; (69) Care of the Wood Lot; (70) Forest Fires in Canada, 1918; (71) Canadian Sitka Spruce; its mechanical and physical properties. Circulars: (5) Planning a Tree Plantation for a Prairie Homestead; (6) Preservative Treatment of Fence-posts; (8) The Forest Products Laboratories; (9) Chemical Methods for Utilizing Wood Wastes; (12) The Empire Timber Exhibition Manual Methods of Communication Adapted to Forest Protection (price one dollar, post free); Dominion Forestry Branch Message Code (price 10 cents post free).

Northwest Territories.—Northwest Territories Act; Northwest Territories Game Act; Migratory Birds Convention Act; Northwest Territories Timber Regulations; Northwest Territories Hay and Grazing Regulations; Yukon Territory, its History and Resources; Yukon Act; Yukon Land Regulations; Yukon Homestead Regulations; Yukon Hay and Grazing Regulations; Northwest Territories Oil and Gas Regulations.

Immigration and Colonization.—Atlas of Canada, United Kingdom and United States editions. Eastern Canada, United Kingdom and United States editions. Canada West, United Kingdom and United States editions. Immigration Facts and Figures. Report of the Chief Inspector of British Immigrant Children. Immigration Act and Regulations. A Manual of Citizenship. Annual Report.

Finance.—Annual Reports of the Public Accounts of the Dominion of Canada. Monthly Statements of the Chartered Banks of Canada. Estimates.

Insurance.—Quarterly Statement of List of Licensed Companies. Annual Abstract of Statements of Insurance Companies in Canada (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies). Annual List of Securities held by Insurance Companies in Canada with Department's Valuation thereof.

Militia and Defence.—Annual Report. Militia List. Militia Orders. General Orders.

Trade and Commerce.—Annual Report. Annual Report *re* Mail Subsidies and Steamship Subventions. Annual Report of Board of Grain Commissioners for Canada. Rules and Regulations made by Board of Grain Commissioners. (Annual) List of Licensed Elevators, etc. (Annual) Grain Inspection in Canada, (1914). Weekly Bulletin containing Reports of Trade Commissioners and other Commercial Information. Handbook for Export to South America (1915). Trade with China and Japan (1914). Export Directory of Canada (1915). Russian Trade (1916). The German War and its relations to Canadian Trade (1914). Toy-making in Canada (1916). The Timber Import Trade of Australia (1917). Trial Shipments of Wheat from Vancouver via the Panama Canal to the United Kingdom. Barbados, Preferential Tariff of. Canadian Economic Commission to Siberia (1919). Canada-West Indies Conference (1920). Dominion Grain Research Laboratory (1920). Electrical Standards and their application to trade and commerce. Mexico as a field for Exports (1921). Motion Pictures, Catalogue of. Report of Special Trade Commission to Great Britain, France and Italy—French and English (1916). Rules and Forms of the Canadian Patent Office. Trade after the War (1916). Trade of the New Countries of South East Europe (1921). Trade between Canada and the British West India Colonies (1920). West Africa and its Opportunities for Canadian Trade (1921).

Publications of the Dominion Bureau of Statistics.—For the publications of the Bureau, covering the field of Canadian statistics, see pages 831–834.

Labour.—Monthly: The Labour Gazette (published in English and French at the nominal subscription price of 20 cents per annum, averaging over 100 pages.) Annually; Report of the Department of Labour. Report of Proceedings under the Industrial Disputes Investigations Act, 1907. Labour Organization in Canada, 1919 (a Report is published for each year about May or June). Special Reports: Strikes and Lockouts in Canada, 1901-1920 (to be published in January 1922).

Labour Legislation of Canada as existing December 31, 1920. (A Report on Labour Legislation is published annually in July or August.) Report of Proceedings under the Employment Offices Co-ordination Act; Report of Proceedings under the Technical Education Act.

Secretary of State.—Annual Report. Regulations and Despatches Respecting Extradition Proceedings. List of Companies Incorporated under the various Companies Acts of the Parliament of Canada from 1867 to December 31, 1913. Copies of Proclamations, Orders in Council and Documents relating to the European War. Method of conducting correspondence between the Dominion and Provincial Governments.

Naval Service.—Annual Report. Royal Naval College of Canada Calendar, containing general idea of scheme of training, prospects of cadets, regulations for entry, etc. Tidal and Current Survey: Tide Tables, published annually, for the East Coast, Pacific Coast, and Hudson Bay and Strait; also three abridged editions for St. Lawrence region, Bay of Fundy and Strait of Georgia. Currents in the Gulf of St. Lawrence, the entrance to the St. Lawrence, and the Southeast Coasts of Newfoundland and Belle Isle Strait. Tables of Currents in the Bay of Fundy. Tides at the head of the Bay of Fundy. Tide levels on the East Coast of Canada and Pacific Coast. Tides and Tidal Streams, a general explanation of the tides. Radiotelegraph Branch: Proceedings of the International Radiotelegraph Conference of London, 1912. Chart showing the Radiotelegraph stations in the Dominion of Canada. Postmaster General's Handbook for Radiotelegraph Operators (Instructions re handling of traffic, etc.). Hydrographic Survey: International Waterways Commission Report. Sailing Directions: St. Lawrence Pilot above Quebec; St. Lawrence Pilot below Quebec (English and French); Sailing Directions for the Canadian Shores of Lake Ontario; Canadian shores of Lake Huron and Georgian Bay; Sailing Directions for the Canadian Shores of Lake Superior. Charts: 34 charts of the St. Lawrence river between Pte. des Monts and Cornwall; Ottawa river: 2 sections covering Lake of Two Mountains; Lake Ontario: 11 coast charts with plans of harbours; Lake Erie: 2 sheets, plans of harbours and anchorages; Lake Huron: 6 coast charts; Georgian Bay 12 charts; North Channel of Lake Huron: 3 charts; Lake Superior: 12 coast charts; Lake Winnipeg: 2 charts; Pacific Coast in the vicinity of Prince Rupert and Queen Charlotte Islands: 11 charts; Atlantic Coast in the vicinity of Halifax Harbour, St John Harbour and Sydney: 7 charts; Hudson Bay: 7 charts; International Waterways Commission Boundary charts between St. Regis and Pigeon bay: 29 charts; Gulf of St. Lawrence in the vicinity of Port Borden and Bathurst: 2 charts; Gulf Telegraph chart of the gulf of St. Lawrence, lower St. Lawrence River to Montreal and Maritime Provinces showing the telegraph and telephone lines and stations, radio-telegraph, storm and marine signal stations, light-houses and fog alarms operated by or for the Government of Canada, the railway lines, submarine cables, tracks of vessels and tables of nautical distances: one chart; Charts of the St. Lawrence river between Cape Magdalen and Cornwall: 40 charts; the Saguenay river, vicinity of Chicoutimi: 1 chart; Lake of the Woods: 1 chart; Vicinity of Vancouver island and adjacent mainland: 4 charts.

Railways and Canals.—Annual Report of the Department.

Board of Railway Commissioners for Canada.—Annual Report.

Marine.—Marine Annual Report, containing Harbour Commissions, etc. Steamboat Inspection. List of Canadian Shipping. Reports of Expeditions to Hudson Bay, Northern Waters and Arctic Archipelago. Canadian Port Directory. List of Lights, etc., in Canada: (a) Pacific Coast; (b) Atlantic Coast; (c) Inland Waters.

Indian Affairs.—Annual Report. Indian Act, 1906, with Amendments to date. Schedule of Indian Reserves, 1913. Indian Treaties and Surrenders, Vols. I, II, III.

King's Printer and Controller of Stationery.—The Canada Gazette, published weekly by authority, with occasional supplements and extras, subscription, $4 per annum payable in advance, single copies, 10 cents each. (Contains

weekly a list of current Government publications, as required by Order in Council 1,522). Judgments of the Board of Railway Commissioners, bi-monthly, $3 per annum; single copies, 20 cents; Exchequer Court Reports, $4 per annum; Supreme Court Reports, $3 per annum; Dominion Statutes, 1921, $4. Acts Public and Private, with amendments to date, 5 cents to 75 cents a copy. Parliamentary Debates, "Hansard", issued daily during session, French and English, $3 per session each for House of Commons and Senate Debates, single copies, 5 cents. Prices of blue-books are in nearly every case printed upon the front cover and are based practically on the cost of paper and presswork. They may be ordered direct from the Superintendent of Stationery, Department of Public Printing and Stationery, or through any bookseller in the Dominion.

Mines.—The Work of the Department of Mines, chiefly scientific and investigatory, is performed by the Department's four principal units, viz: the Geological Survey, Mines Branch, Victoria Memorial Museum Branch, and the Explosives Division.

The Geological Survey carries on areal and economic investigation and research work in mineralogy: the Mines Branch carries on field and laboratory investigations for the furtherance of the mining and metallurgical industries and the compilation of statistics and information relating to them; the Victoria Memorial Museum Branch carries on scientific investigations in anthropology, archæology, zoology and botany; and the Explosives Division, in the administration of the Explosives Act, 1914, has supervision of the manufacture, testing, storage and importation of explosives, and the issuing of licenses under the Act.

The Department of Mines publishes an annual report covering the activities of the whole Department as well as individual annual reports, covering the work of its branches.

The Geological Survey Branch, from 1842 to 1904, published annual volumes. From 1904 to 1910 upwards of 80 reports were issued, all separately. Since then, Memoirs to the number of 125, Bulletins numbering 33, and, in addition, miscellaneous publications of various kinds have been issued, including Geological Guide Books and Handbooks. The subjects dealt with include Areal and Economic Geology of particular districts, Mineralogy, Palæontology, Ornithology, Botany, Anthropology and related topics. In the future, publications on the last three subjects, namely, Ornithology, Botany and Anthropology, as well as all Biological papers, will be issued by the newly constituted *Victoria Memorial Museum Branch.*

The Mines Branch, from its beginning in 1908, has published annual reports of Mineral Production and summary reports covering the investigations of the Metalliferous and Non-Metalliferous Mines Divisions, the Fuel Testing and Ore-Dressing Divisions, and the Ceramic, Road Materials and Chemical Divisions, and the operations of the Dominion Assay Office. Reports have been published, also dealing with the Technology of most of the economic minerals of Canada.

The Explosives Division has published annual reports since 1919.

The publications of the Department of Mines cover the Geology and Mineral Resources of the greater part of Canada. Most of the reports are available free of charge, or for a nominal price, on application to the Deputy Minister of Mines. Some of the reports may be had in French translations.

Commission of Conservation.—Annual Reports, 1910-19; Fire Waste in Canada, J. Grove Smith; Altitudes in Canada, James White, F.R.S.C., F.R.G.S.; Dictionary of Altitudes in Canada, James White, F.R.S.C., F.R.G.S. For the numerous other reports of the Commission of Conservation, *see* 1919 Canada Year Book, pp. 635-636.

Advisory Council for Scientific and Industrial Research.—Annual Reports of the Administrative Chairman, 1917-18, 1918-19, 1919-20 and 1920-21. *General Reports.*—(1) The Briquetting of Lignites, R. A. Ross, E.E.; (2) The Recovery of vapours from gases, Harold S. Davis, M.A., Ph.D., Mary Davidson Davis, B.A.; (3) The de-tarring of Gas by Electrical precipitation, J. G. Davidson, Ph.D.; (4) Nicotine and Tobacco Waste, A. D. Hone, M.A.; (5) Canadian Waste

Sulphite Liquor as a source of Alcohol, Vernon K. Krieble, Asst. Prof., Dept. Chemistry, McGill University; (6) An Investigation into the Question of early Putrefaction of Eviscerated Fish in which the Gills have been left, Louis Gross, M.D.; (8) A Method of Smelting Titaniferous Iron Ore, W. M. Goodwin, B.A., B.Sc.; (9) Food Requirements of the Ranch Fox, G. Ennis Smith B.A., B.Sc.; (10) Fuel Saving Possibilities in House Heating, L. M. Arkley, M.Sc., and James Govan. *Bulletins*: (1) The need for Industrial Research in Canada, Frank D. Adams, Sc.D., LL.D., F.R.S.; (2) Researches on Sound Measurement, Louis V. King, M.A., D.Sc., F.R.S.C.; (3) How to Handle Frozen Fish, E. E. Prince, D.Sc., LL.D.; (4) Hints on Frozen Fish, E. E. Prince, D.Sc., LL.D.; (5) Science and Industry, Prof. J. C. Fields, Ph.D., F.R.S.; (6) The Heating of Houses, Coal and Electricity compared, A. S. L. Barnes; (7) The manufacture of Ethyl Alcohol from Wood Waste, G. H. Tomlinson, B.A.; (8) Some Problems of the Fox Raising Industry, A. Hunter, M.A., B.Sc., M.B., Ch.B.; (9) The Honorary Advisory Council for Scientific and Industrial Research and its work, Frank D. Adams, Sc.D.; LL.D., F.R.S.; (10) A Plan for the Development of Industrial Research in Canada, R. F. Ruttan, B.A., M.D., D.Sc., F.R.S.C.

Copies of these Reports and Bulletins will be forwarded gratis to persons interested, upon request to the Secretary of the Council for Scientific and Industrial Research.

Civil Service Commission.—Annual Report, including lists of successful candidates in examinations, permanent appointments, promotions, and transfers and copies of examination papers set during the period covered by the Report. Regulations of the Civil Service Commission. General Information respecting Civil Service Examinations.

Department of Health.—"The Canadian Mother's Book"; General Venereal Disease Circular No. 1 to the Medical Profession of Canada: "Information concerning Venereal Disease"; General Venereal Disease Circular No. 2 to the Medical Profession of Canada: "Wassermann Test"; General Venereal Disease Circular No. 3 to the Medical Profession of Canada: "Microscopic Examination"; General Venereal Disease Circular No. 4 to the Medical Profession of Canada: "Diagnosis and Treatment of Venereal Disease"; General Venereal Disease Circular No. 1 to the Public: "Information for Men"; General Venereal Disease Circular No. 2 to the Public: "Information for Young Women"; General Venereal Disease Circular No. 3 to the Public: "Information for Parents". Little Blue Books; Home Series; (1) Good Wishes for you from Canada; (2) How to Build the Canadian House; (3) How to Make our Canadian Home; (4) How to Make Outpost Homes in Canada; (5) Canadians Need Milk; (6) How we Cook in Canada; (7) How to Manage Housework in Canada; (8) How to Take Care of Mother; (9) How to Take Care of the Family (10) How to Take Care of the Baby; (11) How to Take Care of the Children; (12) Household Cost Accounting in Canada; (13) How to Take Care of Household Waste; (14) How to Avoid Accidents and Give First Aid. All published in French and English.

Other Departments.—In addition to the publications above enumerated, Annual Reports are issued by the Department of Justice on the Penitentiaries of Canada, the Department of External Affairs, the Public Works and the Auditor General.

List of Principal Publications of the Provincial Governments of Canada, as compiled from information supplied by the respective Governments.

Note.—The numbers within brackets are the numbers of the Bulletins. The publications of the larger provinces are arranged by Departments.

PRINCE EDWARD ISLAND.

Journal of the Legislative Assembly. Statutes. General index to Statutes of P.E.I., 1869-1918. Royal Gazette. Annual Reports of the Provincial Auditor on Public Accounts and of the Departments of Public Works, Education, Agriculture, Falconwood Hospital (for the Insane) and Vital Statistics.

NOVA SCOTIA.

Royal Gazette. Statutes, Journals and Proceedings of Legislative Council. Journals and Proceedings of the House of Assembly. Journal of Education. Manual of the Public Instruction Acts and Regulations of the Council of Public Instruction, 1921. Annual Reports on Public Accounts, Vital Statistics, Statistics of Incorporated Towns and Municipalities, Public Health, Education, Industries and Immigration, Agriculture, Crown Lands, Mines, Subsidized Railways and other Public Works, Rural Telephones, Humane Institutions, Public Charities, including report of Hospital and Sanatorium, Penal Institutions, Neglected Children, Temperance, Publicity Printing, Legislative Library, Utility Board and Workmen's Compensation Board. Also Annual Reports of the Provincial Secretary, the Factory Inspector and of the Highway Board, Power Commission and Game Commissioners.

NEW BRUNSWICK.

Royal Gazette. Statutes. Annual Reports of the Auditor General, of the Board of Health, of the Departments of Education and Agriculture (including Horticulture), Annual Reports on Public Works, Crown Lands, the Hospital for the Insane, the Factory Report, Report of the Jordan Memorial Tuberculosis Sanatorium at River Glade, Report of Women's Institutes, and Report of Chief Inspector under Prohibition Act, Report of the Workmen's Compensation Board. Official Year Book.

QUEBEC.

Note.—The titles of publications available in the English language are printed in English.

Attorney General.—Annual Report of Prison Inspectors; Annual Report of Public Utilities Commission.

Provincial Secretary.—Annual Report of the Secretary and Registrar; Annual Report of the Superior Board of Health of the Province of Quebec; Statistical Year Book; Educational Statistics; Financial Statistics of School Corporations; Municipal Statistics (annual); Judicial Statistics (annual); Statistics of the Penal Establishments (annual); Statistics of the Benevolent Institutions (annual); The Official Gazette (weekly); The Statutes of the Province (annual); Revised Statutes of the Province (1909); List of Municipal Corporations (annual).

Treasury.—Annual Statement of Public Accounts; Annual Estimates.

Lands and Forests.—Annual Report of the Minister; Surveyed Townships and Explored Territories, 1889; Richesse Forestière de la Province de Québec, J. C. Langelier, 1905; The Forest, Fernow, 1905; Arbres de Commerce de la Province de Québec, 1906; Table of Families of Twelve Children, Eugène Roulliard, 1904, 1906; Townships Surveyed and Territories Explored, 1908; List of Timber License Holders, 1911; Dictionnaire des Lacs et Rivières de la Province de Québec, Eugène Rouillard, 1914, Bulletin No. 1 of the Forestry Service; Table of Water Powers granted by the Province of Quebec, from 1st July, 1867, to 31st December, 1913, A. Amos; Bulletin No. 2 of the Forestry Service, Piché and Bédard, 1914; No. 1, La Rouille vesiculaire du Pin blanc, S.-C. Piché; The Water Powers in the Province of Quebec (Illustrated), 1917; Nomenclature of the Geographical Names in the Province of Quebec, Quebec Geographical Commission; Annual Report of the Quebec Streams Commission; Circulaire No. 3, Les Industries forestières de la Province de Québec, S.-C. Piché.

Agriculture.—*Annual Reports*: Department of Agriculture; Competition for Agricultural Merit; Dairymen's Association, Pomological Society; Journal of Agriculture and Horticulture, illustrated monthly. *Bulletins*: (1) Plans de fromageries et de beurreries; (2) Le Drainage Pratique, G. Michaud, 1914; (7) Le Cheval du Cultivateur, J. D. Duchene (French and English), 1914; (8) Culture des Céréales, Collège Macdonald, 1914; (14) La Culture du Trèfle; (15) La Culture du Blé-d'Inde Fourrager; (16) Guide de l'Arboriculteur; (18) Breeding and Preparing Bacon for the Market; (22) Des Bovidés; (24) The Great Fallacy of White Bread; (25) Etude Sommaire sur les Céréales; (29) Choix de la Semence; (39) Celery Culture; (40) How to Plant your Fruit Trees; (42) De la Protection des Plantes; (43) Bean

Culture; (44) Vegetable Culture (45) Liste des Présidents et Secrétaires des Sociétés Agricoles; (47) Le lapin; (48) Manuel de médecine Vétérinaire; (49) Home Canning of Fruit Products; (50) Sheep Raising for Profit in Quebec; (51) How to increase the Production of Pork; (52) Breeders' Guide of the Province of Quebec; (53) Le Fumier de Ferme—Composition— Valeur— Conservation; (55) L'élevage des volailles dans les Villes et les Villages; (56) De la Culture des Racines Fourragères; (57) Efficient Poultry Production in War-time; (58) How to save Meat; (61) Les engrais Chimiques et amendements; (62) Le Rucher québecois; (64) Traitements des semences; (65) Le Parantonnaire; (66) Comment et pourquoi produire des fraises; (67) Insects Nuisibles aux Animaux de la ferme; (69) Ennemis des jardins et vergers; (70) La rotation expliquée; (71) Le paiment du lait et de la crème. *Circulars*: (3) La Poule couveuse et les Poussins; (15) La Diarrhée chez les Poussins; (22) Concours d'Etables; (25) Culture du Maïs; (26) Comment économiser les Grains au Poulailler; (27) Calendrier d'Arrosage pour les Vergers; (28) Wheat Growing; (29) De la Culture de Seigle; (30) De la Culture de l'Orge; (31) De la Culture de l'Avoine; (32) De la Culture du Lin; (33) Pulvérisation pour les Vergers-Potagers; (35) Culture des Pois; (36) Culture des Haricots; (37) Potato Culture; (38) Calendrier général d'Arrosage; (39) Usage du Miel à la Maison; (40) Culture des Fleurs; (41) Pommes de terre à la cuisine.

Roads.—Annual Report of the Minister of Roads.

Great Eastern Railway (Squamish to Clinton); (32) Vicinity of the Pacific Great Eastern Railway (Clinton to 52nd Parallel); (33) Central Lillooet Division; (34) The Chicotin Plateau; (35) Fort George Land Recording Division, Central and Western Portions; (36) Fort George Land Recording Division, Fraser River (south fork) and Canoe River. *Forest Branch*: (1) Barns, Combination and general purposes (1915); (2) Barns, Dairy, Ice, and Milk Houses (1915); (3) Barns, Beef Cattle (1915); (4) Barns, Horse (1915); (5) Barns, Sheep (1915); (6) Piggeries and Smoke Houses (1915); (7) Poultry Houses (1915); (8) Granaries; (8) Implement Sheds (1919); (9) Silos and Root Cellars (1915); (10) Farm Houses (1916); (12) How to Finish British Columbia Woods (1919); (19) B.C. Manufacturers of Forest Products; (21) Uses, Strengths, and Working Stresses of B. C. Timber (1920); (Q) What are your Needs? British Columbia Can Supply them; Woods to use; (T.S.) How to obtain a "Timber Sale." *Grazing Branch*: (1) Grazing Management of Crown Lands (1919); (2) Grazing Management of Crown Lands Range Allotment (1918); (3) Grazing Management of Crown Lands Co-operative (1919); (4) Grazing Possibilities of British Columbia (1920); (10) Regulations and Instructions for the Use of the Crown Ranges for Grazing Live Stock (1919).

Department of Mines.—Comprehensive Annual Reports obtainable on application to the Department of Mines.

Department of Agriculture.—*Reports and Miscellaneous*: (8) Agriculture in British Columbia; (26) Columbia-Kootenay Valley, (2nd edition); (27) Climate of British Columbia, (5th edition); (30) Guide to Bee-keeping; (59) Agricultural Statistics (1913); (65) Agricultural Statistics (1914); (76) Agricultural Statistics (1916); (88) Agricultural Statistics (1920); (83) Preservation of Food; (54) Women's Institute Handbook; Women's Institute Report (1914); Women's Institute Report (1915); Women's Institute Rules and Regulations; Farmers' Institute Annual Report (1915 and 1916); (85) Clearing Bush Lands; Farmers' Institute Advisory Agricultural Conference at Smithers; Farmers' Institute Rules and Regulations; (12) Proceedings of Entomological Society of British Columbia (1919); Agricultural Fairs Association Report (1918); Board of Horticulture Rules and Regulations (1919); Bee-keepers' Calendar for British Columbia (1920); Farm Account Book; Agricultural Department Annual; Reports, 1915, 1916, 1917 and 1920. List of Publications, Department of Agriculture; Agricultural Journal (Circulation 8,000. Published Monthly); Booklet on Aims and Objects of Farmers Institutes; Leaflet, Order in Council re Bounties. Opportunites in B.C. (1921 Edition); Poultry Breeders' Directory (No. X); Some Questions and Answers regarding British Columbia, (Revised Edition for Settlers); Stock-breeders Directory (No. X); Women's Institutes—Annual Reports, 1914 and 1915; Rules and Regulations. *Bulletins*: *Live Stock and Mixed Farming.*—(60) Hog-raising in British Columbia; (64) Goat-raising in British Columbia; (67) Feeding and Management of Dairy Cattle; (71) Butter-making on the Farm (2nd edition); (72) Milk-testing and Dairy Records; (73) Field Crop and Field Competition; (77) Sheep-raising; (78) Boys' and Girls' Competition, 1918; (79) Field-crop Competition (1918); (80) Management of Market Rabbits (2nd edition); (86) The Potato in British Columbia; (87) Fertilizers. *Poultry Raising, Etc.*—(26) Practical Poultry-raising (6th edition); (39) Natural and Artificial Brooding and Incubating (3rd edition); (49) Market Poultry (3rd edition); (74) Breeding and Selection of Commercial Poultry; (63) Poultry-house Construction. *Circular Bulletins*: (1) Thousand-headed Kale (2nd edition); (5) Clover-dodder; (10) Care of Milk and Cream; (13) Root-seed growing in British Columbia; (14) The Use of Agricultural Lime; (18) Noxious Weeds, their identification and eradication; (20) Seed-growers' Directory, 1917-18; (21) Silage aids Production; (22) Medical Inspection of Schools. *Agricultural Department Circulars*: (14) Community Breeding (2nd edition); (15) British Columbia Farmer and his Silo; (16) Clover and Alfalfa Seed Production in British Columbia, 1916; (22) City and Suburban Food Production; (24) Food for Young Children; (25) Food for Young Children; (26) Food for Young Children; (27) Hints to Exhibitors at Fall Fairs; (28) Hints to Exhibitors at Fall Fairs; (29) Hints to Exhibitors at Fall Fairs; (32) Potato Certification in British Columbia; (33) Vancouver Island and Gulf Islands; (34) Agriculture in West Kootenay; (35) How to Pack Nursery-Stock, etc.; (36) Preliminary Report of forty-five Dairy Farms at Chilliwack, etc.; (37) Some Good Egg Recipes; (38) Cost of Producing Apples in Okanagan Valley. *Horticultural Circulars*: (6) Spray Calendar

(Revised, 1920); (14) Practical Irrigation; (19) Propagation and Selection of Nursery Stock; (20) Orchard Cultivation and Cover-crops; (33) Fruit-growing Possibilities, Skeena River; (48) Exhibiting Fruits and Vegetables (2nd edition). *New Horticultural Series:* (31) Peach-twig Borer; (32) Cabbage-root Maggot; (33) Strawberry-root Weevil; (34) The Woolly Aphid of the Apple; (35) Currant Gall-mite; (36) The Onion-thrips; (3rd edition;) (37) The Imported Cabbage-worm; (38) The Lesser Apple Worm (2nd edition); (39) Apple-asphides; (40) Soap Solutions for Spraying (2nd edition); (41) The Oyster-shell scale; (42) Top working of Fruit Trees and Propagation; (43) Gardening on a City Lot; (44) Apple-scab; (45) Anthracnose; (46) Egg-plant and Pepper Growing in British Columbia Dry Belt; (47) Cucumber and Cantaloupe Growing in British Columbia; (48) Forcing Houses and Frames for producing Early Vegetable Plants; (49) Tomato-growing in British Columbia Dry Belt; (50) Potato-diseases; (51) Orchard Cover-crops; (52) Diseases of Stone-fruits in British Columbia; (53) Selection of Orchard Sites and Soils; (54) Loganberry Culture; (55) Raspberry Culture; (56) Currant and Gooseberry Culture (2nd edition); (60) Pruning Fruit Trees; (61) Making Lime-sulphur at Home (1920); (62) Planting Plans and Distances; (63) Locust control. *Poultry Circulars*: (2) Tuberculosis in Poultry; (4) Management of Turkeys (2nd edition); (11) Poultry-keeping on a City Lot (3rd edition); (12) Management of Geese; (15) Profitable Ducks; (19) Poultry Rations and their Practical Application (2nd edition); (24) Poultry-culling; (25) Hatching Hints; (26) Soil-contamination. *Dairy Circulars.*—(1) Starters for Farm Cheese-making; (2) Farm cheese; (3) Cottage cheese; (4) Clotted Cream.

Note.—Copies of the publications listed will be sent free of charge on application to the Publications Branch, Department of Agriculture, Victoria, B.C.

YUKON TERRITORY.

Reports from the Gold Commissioner, and from the Crown Timber and Land Agent are contained in the Annual Report of the Department of the Interior, Ottawa. Pamphlet "Yukon Territory, Its History and Resources," published by the Department of the Interior.

XIV.—LEGISLATION AND PRINCIPAL EVENTS OF THE YEAR 1921.

DOMINION LEGISLATION, 1921.

The following are all the Acts of the fifth session of the thirteenth Parliament of Canada, begun and holden at Ottawa on February 14, 1921, and closed by prorogation on June 4, 1921. During the session 54 public general Acts and 144 local and private Acts were passed. Of the latter 19 were railway and bridge companies' Acts, 4 were insurance companies' Acts, 10 were other companies' Acts and 111 were divorce Acts.

Finance.—Two Appropriation Acts were passed during the session, chapters 2 and 54, the former relating to the fiscal year 1922 and the latter to the fiscal years 1921 and 1922. The total sum appropriated was $440,981,675 for the fiscal year 1922, and $14,681,810 for the fiscal year 1921. Among the larger appropriations for 1921-1922 were $30,530,359 for war and active militia pensions, loans of $50,000,000, $89,687,633 and $26,000,000 to railways, $35,000,000 as advances to soldiers settling upon the land and cost of administering the Soldiers' Settlement Act, $13,900,370 as loans to Provincial Governments for housing and $7,000,000 to make good the deficit on the Canadian Government Railways up to the end of 1921.

By chapter 33, the Income War Tax Act of 1917 is amended by providing that persons failing to deliver a return of income within the prescribed time shall be liable to a penalty of 5 p.c. of the tax payable by them, but not to exceed $500; a penalty is also imposed for short payment, while it is also provided that the taxpayers shall receive a notice of assessment. By chapter 34, the excise duties on spirits are drastically increased from a basic rate of $2.40 per proof gallon when made from raw grain, to a basic rate of $9.00 per proof gallon, the old duties to be continued, however, in the case of spirits used by licensed manufacturers of patent and proprietary medicines, extracts, essences and pharmaceutical preparations. A drawback of 99 p. c. of the duty is allowed on limited quantities of spirits used for university, scientific or research purposes. Under chapter 50, an Act to amend the Special War Revenue Act, excise duties imposed in 1920 on a large variety of articles are repealed and others reduced, while the tax on sales imposed in 1920 is increased in the case of sales and deliveries by manufacturers and wholesalers or jobbers from 1 p.c. to 1½ p.c., and in the case of sales by manufacturers directly to retailers and consumers, from 2 p.c. to 3 p.c. Where goods are imported the rates under similar circumstances are increased from 2 p.c. to 2½ p.c. and 4 p.c. respectively.

Agriculture.—By chapter 5, the powers of the Canadian Wheat Board are continued in order that unsettled business may be concluded. By chapter 15, the operation of the Act of 1918 increasing compensation for animals slaughtered under the provisions of the Animal Contagious Diseases Act, is extended until 1924. By chapter 28, the grading of dairy produce is authorized. Chapter 35 imposes upon pressers of baled hay or straw instead of on vendors the obligation of stating the weight of bales, and chapter 41 permits until March 1, 1923, the manufacture, importation and sale of oleomargarine.

Trade and Commerce.—By chapter 8, the French Trade Agreement signed January 29, 1921, modifying the terms of the Convention of 1907, is approved, Canada granting to France, subject to the usual reservation in favour of other portions of the Empire, most favoured-nation treatment. Certain Canadian articles are removed from the operation of the French minimum tariff, while certain others are granted its privileges.

The West Indies Trade Agreement Act (c. 13) brings into force, so far as Canada is concerned, the provisions of the agreement made in 1920, providing for preferential customs duties and for improved steamship communication between Canada and the British West Indies, British Honduras and British Guiana. (See 1920 Year Book, p. 744).

The Winding-up Act was amended by chapter 14 in order to promote the securing of statistics of companies going into liquidation. The Bankruptcy Act was amended in numerous particulars by chapter 17, including provision for the appointment of a committee of creditors to administer or carry on the business of the debtor.

The authorized trustee is directed to insure the property of the debtor, and with the permission of the inspectors, may retain or disclaim leases. The administration of the Act is transferred from the Department of Secretary of State to the Department of Justice.

Civil Service.—By chapter 22, positions on government railways and ships are excluded from the operation of the Civil Service Act of 1918, and other positions may be so excluded where the Civil Service Commission considers this desirable; war pensioners are granted a special preference for employment in the Civil Service. Chapter 49 amends the Act of 1920 providing for the retirement of certain members of the public service, and extends the period when civil servants may be retired under it until July 1, 1922. Chapter 32 confirms certain appointments of officials made by the Minister of the Interior prior to May 24, 1918.

Copyright.—By the Copyright Act, (chapter 24), the law relating to copyright is consolidated and amended. The enactments, relating to copyright passed by the Parliament of the United Kingdom, so far as they apply to Canada, are repealed. The term of copyright is extended to cover the life-time of the author and for fifty years thereafter.

Currency.—By chapter 6, the Currency Act of 1910 is amended by providing for the issue of a nickel five-cent coin weighing 70 grains which shall be legal tender up to five dollars; the melting down of current legal tender gold coin, except under license from the Minister of Finance, is prohibited.

Elections.—Chapter 1 amends the Dominion Election Act with reference to the vote under the Canada Temperance Act in Ontario. By chapter 7, the statutes relating to corrupt practices at elections are amended. The Dominion Elections Act of 1920 is amended by chapter 29, defining as urban divisions those which contain 2,500 population instead of 1,000; hours of polling are to be from 8 a.m. to 6 p.m.; 14 days are uniformly to elapse between nomination and election.

Health.—By chapter 42, amending the Opium and Narcotic Drug Act, prescriptions for such drugs are not to be filled more than once, and are to be for medicinal purposes only; offences against the Act are made indictable offences.

Justice.—Under chapter 3, the Exchequer Court Act is amended to allow the Commissioner of Patents to appear before the Exchequer Court and to appeal to the Supreme Court of Canada against its decision. By chapter 18, amending the Canada Evidence Act, seven days is substituted for ten days as the period which must elapse between the production of documents to be used in a trial and the trial itself. By chapter 20, the omission of certain technicalities in the procedure under the Canada Temperance Act is not to defeat the general intention of the Act. An Act to amend the Criminal

Code (chapter 25) penalises the unlawful possession of bombs or grenades and prohibits aliens not having permits from possessing firearms or ammunition; driving an automobile while intoxicated is made an offence, and the theft of automobiles is made punishable by not less than a year's imprisonment. Whipping is added to the punishment for rape, for robbery, and for assault with intent to robbery. The conviction of a disorderly house is made *prima facie* evidence against frequenters. The Judges' Act is amended by chapter 36, which prescribes when judges are not to be paid travelling expenses. By Chapter 37 the Juvenile Delinquents' Act is amended by increasing the age limit within which delinquents are to be classed as juveniles from 16 to 18 years and by chapter 48 the Prisons and Reformatories Act is correspondingly amended. Chapter 46 authorizes the ratification of the Protocol of December 16, 1920, accepting the Statute for the Permanent Court of International Justice, provided for by Article 14 of the Covenant of the League of Nations.

Immigration.—By chapter 21, it is provided that Chinese desiring to enter Canada exempt from head tax are required to prove their status as men of science, merchants, teachers or students. The period during which Chinese who have once paid head tax and then returned to China may come back to Canada without paying additional head tax is extended from 12 months to 2 years. The prohibition of immigration of certain classes of persons contained in the Immigration Act is extended to cover Chinese of these classes. By chapter 32, amending the Immigration Act, the possession of a prescribed sum of money may be required, not only from immigrants, but from certain classes of non-immigrants desiring to enter Canada.

Pensions.—By chapter 45, the Pension Act is amended in various details, and the pensions paid to or in respect of members of Canadian Naval or Military Forces who were killed, died or were disabled on active service prior to the outbreak of the Great War, are raised, during the residence of the recipients in Canada, to the same rate as war pensions.

Railways.—By chapter 9, it is provided that the time for the award of the arbitrators in the Grand Trunk Railway arbitration may be extended by the Governor in Council. It also provides that the directors of the companies in the Grand Trunk System shall resign and be replaced by nominees of the Government, these to hold office during pleasure and have the powers assigned to the committee of management. A two years' extension of time for the completion of the St. John and Quebec Railways between Centreville and Andover, N.B., is granted by chapter 12.

Returned Soldiers.—The Returned Soldiers' Insurance Act of 1920 is amended by providing that of such insurance an amount not to exceed $1,000 shall be paid on the death of the insured, the remainder to be paid to the beneficiary as a life annuity, an annuity certain for from 5 to 20 years, or as an annuity guaranteed for from 5 to 20 years, but payable thereafter during the life of the beneficiary.

In the case of unmarried insurers future wives and children shall have the first claim, but the insurers may name alternative beneficiaries (chapter 52).

Shipping.—By chapter 19, the penalty for breach of harbour regulations is increased.

Miscellaneous.—By chapter 4, a procedure is prescribed for the renunciation of Canadian nationality: chapter 10 establishes a Lake of the Woods Control Board, with authority to control in the most beneficial way the waters of the Winnipeg River, Lac Seul, the Lake of the Woods and other adjacent waters; chapter 11 extends the time for the payment of certain debentures issued by the Montreal Harbour Commission; chapter 16 provides for the observance of the Monday in the week of November 11 as Armistice and Thanksgiving Day; chapter 23 repeals the Conservation Act of 1909 and its amendments; chapter 26 constitutes a Department of Customs and Excise and also amends the Customs Act, providing that for the purpose of customs valuations, no reduction in excess of 50 per cent shall be allowed in the valuation of the currency of the country of export; chapter 31 consolidates the legislation relative to gas inspection; chapter 38 is an Act providing for the regulation of the Lake of the Woods and other adjacent waters; chapter 39 increases the penalty for violation of the Migratory Birds Convention Act; chapter 40 amends the Northwest Territories Act; chapter 43 amends the Ottawa Improvement Commission Act of 1919; chapter 44 amends the Patent Act; chapter 47 amends the Post Office Act by granting authority to establish a system of mail insurance, and by allowing unpaid as well as insufficiently paid letters to proceed to a Canadian destination charged with double postage; chapter 51 amends the Statistics Act by providing that certain schedules sent to a provincial Department under an arrangement between the Department and the Bureau of Statistics may be sent post free; chapter 53 amends the Royal Canadian Mounted Police Act with regard to the disposition of fines and forfeitures earned by members of the Force.

PROVINCIAL LEGISLATION, 1921.

NOTE.—Under each subject in the following summary of Provincial Legislation the provinces are taken in order from East to West. For convenience of reference names of provinces are printed in italics.

The following are all Acts of the Provincial Legislative Sessions held between January and June 1921: 11 Geo. V. (Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Alberta and British Columbia, (first session); 11-12 Geo. V. (Nova Scotia); between October and December, 1921: 12 Geo. V. (British Columbia, second session) and in November and December, 1920: 11 Geo. V. (Saskatchewan).

Agencies.—In *Prince Edward Island*, Chapter 11 requires the certification of fire insurance agents; Chapter 12 requires the certification of life insurance agents. In *Nova Scotia*, Chapter 14 requires that collecting agents be licensed; Chapter 67 amends the Act respecting insurance agents.

Agriculture.—In *Prince Edward Island*, by Chapter 5, the province accepts the aid offered by the Dominion under the Technical Education Act and otherwise provides for the maintenance and operation of the Provincial Agricultural and Technical School, which continues to be under the Department of Agriculture. In *New Brunswick*, Chapters 61, 62 and 63 legalize assistance to certain agricultural societies, the first by way of exempting debentures from taxation, the second and third by way of annual grants from the communities interested. In *Quebec*, Chapter 35 amends the Revised Statutes of 1909 respecting provincial competitions and distinctions for agricultural merit; Chapter 36 amends the same Statutes respecting agricultural societies; Chapter 37 revises the same statutes relating to the Dairy Association of the Province of Quebec, the inspection of butter and cheese factories and the manufacture of dairy products; Chapters 38 and 39 provide for the establishment and operation of demonstration farms and a provincial Dairy School; Chapter 40 establishes a basis of payment for milk and cream in food product factories; Chapter 41 relates to apiculture; Chapter 42 provides for the protection of thoroughbred cattle; Chapter 89 amends the provisions respecting the Agricultural and Horticultural Society of Montreal. In *Ontario*, Chapter 29 amends the Agricultural Associations Act; Chapter 30 amends the Agricultural Societies Act; Chapter 31 provides for financing agricultural development, empowering the Provincial Treasurer to borrow money at not more than 4 p.c. interest for the purpose of (a) loans to members of associations, (b) bonds or debentures under the Agricultural Development Act, (c) bonds or debentures of, or guaranteed by, the Dominion of Canada or any province of Canada, (d) bonds or debentures of, or guaranteed by, any municipality or school section in Ontario; Chapter 32 provides for the promotion of agricultural development, establishing and incorporating an Agricultural Development Board; Chapter 33 authorizes the formation of a Farm Loans Association for the purpose of making to its members short-term loans for specified agricultural purposes, and provides for provincial assistance to such association for securing capital. In *Manitoba*, Chapter 23 amends the Farm Loans Act of 7 Geo. V., especially by reducing the capital of the Association to $550,000, raising the rate of interest on loans from 6 to 7 p.c. and on bonds from 5 to 6 p.c., also in other particulars, one of them relating to the holding of capital shares. In *Saskatchewan*, Chapter 49 amends the Agricultural Societies Act in respect to grants; Chapter 50 amends the Agricultural Co-operative Associations Act by legalizing the association of five or more persons as an incorporated association; Chapter 51 amends the Agricultural Aids Act; Chapter 52, the Stock Inspection Act; Chapter 53, the Horse Breeders' Act; Chapter 54, the Stray Animals Act; Chapters 55 and 56, the Saskatchewan Farm Loans Act, the first limiting loans to 50 p.c. of the board's valuation of the property offered as security, the second naming the commissioner as the managing member of the board and allowing him and the other members of the board remuneration; Chapter 57 amends the Farm Implement Act defining "large implements",

requiring a vendor under penalty to maintain a sufficient supply of repairs for machines supplied by him, empowering the Minister of Agriculture to appoint inspectors of stocks of repairs; Chapter 58 amends the Dairy Products Act, naming penalties for violation of the Act; Chapter 59 amends the Egg Marketing Act by forbidding the purchase for re-sale or sale of eggs unfit for human food. In *Alberta*, Chapter 47 amends the Live Stock Encouragement Act particularly by providing measures for security in the case of loans received by members of associations; Chapter 48 amends the Agricultural Societies Ordinance, one of the amendments being to the effect that no new society have its chief place of business within twenty-five miles of that of an existing society in the Province; Chapter 49 amends the Veterinary Act, some of the amendments giving certain powers to the Senate of the University controlling qualifications, etc. of veterinary doctors; Chapter 50 amends the Domestic Animals Act of 1920, particularly with reference to animals running at large and grazing on unfenced lands; Chapter 51 amends the Stallion Enrolment Act. In *British Columbia*, Chapter 2, first session, amends the Agricultural Act of 1915 by extending Farmers' Institutes privileges to associations or societies carrying on work of the same character as these institutes; Chapter 3 amends the Animals Act by prescribing a certain penalty for violation of subsection (1) of Section 3.

Assessment.—In *Prince Edward Island*, Chapter 1 amends the Road Act of 1920 by requiring a copy of assessment list to be furnished to the Commissioner of Public Works and by requiring the posting of three road tax notices in public places, which posting clears the overseer from issuing further notices; Chapter 2 rectifies defects, etc., in the proceedings under the Taxation Act of 1920, legalizes schedules, and declares all arrears of taxes under the Act recoverable. In *Nova Scotia*, Chapter 56 amends the Assessment Act of 1918 by requiring the levying of a poll tax of $3.00 and not over $5.00 on every male between 18 and 60 who is not otherwise assessed in the municipality, and of $1.00 and not over $3.00 on such person if he is otherwise assessed, and of 30 cents for the support of the poor upon every person over 21 years; Chapter 70 amends Chapter 62 of 1920 by stating that the latter Act does not repeal certain sections of the Assessment Act of 1918; Chapter 3 amends and consolidates Acts relating to the taxation of companies such as Banks, Insurance, Loan, Trust, Telegraph and Cable, Telephone, Gas and Electric Railway Companies, etc.; a public utility may earn 8. p.c. of the value of its property, assets and undertaking, but is taxed 50 p.c., on any amount over the 8 p.c.; a tax is also payable on paid up capital of incorporated companies; Chapter 54 amends the Land Tax Act of 1917 by fixing the value of assessable land, if not otherwise valued, at $2 per acre. In *Ontario*, Chapter 67 amends Assessment Acts, one amendment being to the effect that agents, etc., of residents in Ontario are to forward statement of income of their principal; another amendment is to the effect that Court of Revision may order tenant to

pay taxes; Chapter 68 amends the Municipal Tax Exemption Act of 1920 with regard to votes, petitions and repeals in connection with by-laws; Chapter 69 amends the Statute Labour Act, allowing commutation of Statute Labour where approved by landholders; Chapter 12 amends the Corporations Tax Act affecting a tax on bank reserves, an additional tax on railways, increasing tax on telephone companies, etc.; Chapter 13 imposes a tax of 2 p.c. on transfers of land; Chapter 14 imposes a license upon billiard and pool rooms and bowling alleys; Chapter 11 amends the Mining Tax Act, especially in limiting deduction for municipal tax; Chapter 10 amends the Succession Duty Act in respect to rates of duty. In *Manitoba*, Chapter 1 amends the Amusements Taxation Act respecting the manner of collecting the penalty clause and by giving authority to the government for regulations respecting imposition of tax. In *Saskatchewan*, Chapter 23 amends the Wild Lands Tax Act in respect to equalization of the assessment by the Wild Lands Tax Commissioner; Chapter 22 amends the Succession Duty Act in respect to insurance moneys; Chapter 24 amends the Travelling Shows Act by fixing rates for licenses for such shows; Chapter 42 amends the Arrears of Tax Act with respect to land offered for sale for arrears of taxes, requiring proper publicity for such a sale; that land be not sold at such sale for less than the arrears, penalties, etc., and by giving the owner certain preferences over other bidders for such land. In *Alberta*, Chapter 25 amends 21 sections of the Tax Recovery Act of 1919: one protecting the rights of creditors in the case of lands sold for tax recovery; another regulating the disposal of the proceeds of such a sale; one important amendment is to the effect that in the case of sale for taxes the person or persons interested in the land shall be notified by registered mail and entitled to redeem it at the expiration of nine months from the date of sale, also that after the expiration of nine months a notice of sale shall be published in the Alberta Gazette and in a newspaper having general circulation in the municipality. In *British Columbia*, Chapter 63, first session, amends several sections of the Taxation Act; section 6 of the amendment requiring every person other than corporations, without any notice or demand, to make a return containing a statement of property or income; section 5 referring to depastured cattle, section 8 to procedure in case of returns received after compilation of assessment roll, section 9 to corporations assessment rolls, sections 11 and 25 to mines, sections 16, 23, 24 and 29 to date or procedure when taxes are due or delinquent, sections 18, 21 and 22 to assessment of corporations, section 28 to soldiers' taxes; Chapter 64 amends the Amusement Tax Act; Chapter 65 amends the Poll Tax Act.

Buying and Selling.—In *Prince Edward Island*, Chapter 11 requires the certification of fire insurance agents; Chapter 12 requires the certification of life insurance agents. In *Nova Scotia*, Chapter 14 requires that collecting agents be licensed; Chapter 67 amends the Act respecting insurance agents. In *Ontario*, Chapter 50 amends the Bills of Sale and Chattel Mortgage Act by exempting the Crown

from the provisions of the Act. In *Manitoba,* Chapter 5 legislates respecting the sale of goods in bulk, that is, a sale out of the ordinary course of business of the vendor or a sale of his entire stock or his interest in the business; the act requires that a statement be furnished to the purchaser, also that the vendor show at the time of the completion of the sale that the creditors are either paid in full or produce evidence of a waiver or consent by the creditors; unless the provisions of the Act are complied with, the sale is void against creditors. Chapter 9 amends "An Act respecting Contracts relating to Land" rendering certain provisions imperative after January 1, 1922. In *Saskatchewan,* Chapter 5 amends an Act respecting Lien Notes and Conditional Sales of Goods by repealing sections 3, 4 and 5. In *Alberta,* Chapter 12 is an Act to facilitate the sale of lands vested in the Crown in the right of the Province and authorizes a Minister to sell such land at public auction and to make regulations with respect to the conditions, of sale, selection and qualifications of auctioneers, etc., providing that such auctioneer shall not be required to obtain a license for the purpose of the sale.

Child-Welfare.—In *Nova Scotia,* Chapter 30 amends the Adoption of Children Act by legalizing adoption in certain cases on the written consent of the Superintendent of Neglected and Delinquent Children; Chapter 50 amends the Children's Protection Act, especially in respect to notification in cases of entry into and discharge from an institution. In *Quebec,* Chapter 86 amends the Statutes of 1909, respecting foundlings placed in the custody of certain institutions, by provisions in cases of children being entrusted to the custody of persons, etc.—these persons to guarantee suitable education under contract by which the institution may again take possession if deemed expedient. In *Ontario,* Chapter 55, an Act respecting the Adoption of Children, defines those who may apply for leave to adopt, the consent required and dispensed with, the conditions of prior residence, the rights of adopted child to inherit, the inheritance from adopted child, the rights of non-resident as to succession in Ontario and procedure in case of previous adoption; Chapter 53 deals with legitimation of children by the subsequent marriage of their parents; Chapter 54, an Act for the protection of illegitimate children, makes rigorous provision for the affiliation and support of such children by the parents. In *Alberta,* Chapter 20 to amend the Venereal Diseases Prevention Act affects Chapter 12 of 1909, being a Children's Protection Act. In *British Columbia,* Chapter 1 first session amends the Adoption Act in reference to the name taken by the adopted child.

Civil Service Reform.—In *Nova Scotia,* Chapters 24 and 25 amend the Public Service Act as amended in 1917. In *Quebec,* Chapter 19 amends the Revised Statutes relating to the Civil Service in respect to annual increases in the salaries of messengers; Chapter 20 makes certain provisions respecting the pensions of public officers belonging to the outside service; Chapter 21 authorizes the Government to take out group insurance policies on the lives of public

officers and employees; Chapter 22 amends the Act respecting the Quebec Public Service Commission, one of the amendments making special provisions as to pension of president of the Commission if he be not re-appointed. In *Ontario*, Chapter 3 amends the Ontario Public Service Superannuation Act, one amendment providing for a *per diem* allowance to members of the board; Chapter 5 creates the office of King's Printer. In *Saskatchewan*, Chapter 15 amends the Civil Service Act. In *Alberta*, Chapter 12 contains a section which confers certain powers upon the Deputy Minister of Municipal Affairs.

Conservation and Production.—In *Prince Edward Island*, Chapter 10 amends an Act to provide for the prevention and suppression of fires; Chapter 22 is an Act to promote sanitary conditions in fox ranches. In *Nova Scotia*, Chapter 2 amends and consolidates the acts for the preservation of game and the protection of woods against fires; Chapter 27 amends the Sheep Protection Act; Chapter 28 amends the Act respecting the improvement of dyked and marsh lands; Chapter 68 amends the Fire Prevention Act. In *New Brunswick*, Chapter 38 amends the Act respecting the protection of sheep from dogs; Chapter 10 provides for the prevention and suppression of fires; Chapter 16 relates to the storing of waters in rivers, streams and lakes; Chapter 33 amends the Forest Fires Act. In *Quebec*, Chapter 39 provides for the establishment and maintenance of a dairy school and intermediate agricultural schools; Chapter 42 relates to the protection of thoroughbred cattle; Chapter 43 requires the Minister to make from time to time lists of the public lands suitable for cultivation and also provides for the administration and sale of such lands; Chapter 44 amends the Quebec game laws. In *Ontario*, Chapter 18 provides for development work in Northern and Northwestern Ontario; Chapter 19 authorizes Minister to acquire lands for reforestation; Chapter 31 provides for the financing of agricultural development; Chapter 32 establishes a board for the promotion of agricultural development; Chapter 65 amends the Planning and Development Act; Chapter 66 provides for public improvements and services in certain suburban areas. In *Manitoba*, Chapter 24 amends the Fires Prevention Act of 1917 by providing that the penalty for not properly extinguishing a fire shall apply to any person who kindles or is a party to kindling a fire in the open air for camping, etc.; it also gives greater powers to the fire guardian in commandeering the services of persons for fighting fires and in demanding information from travellers as to the location of their camps, etc.; Chapter 26 makes several amendments to the Game Protection Act with special reference to close seasons, use of dogs, putting out of poison, etc.; Chapter 66 amends the Sheep Protection Act with reference to notice to municipality in case of injury to sheep. In *Alberta*, Chapter 57 provides for the formation of drainage districts; by this Act, the Drainage Act of 1916 is repealed; the Act itself is in five parts, the first part dealing with organization, the second with elections, the third with the assessment roll, the fourth with expropriation of land

and the fifth with executions against districts; Chapter 59 provides for assistance to certain drainage districts; Chapter 60 amends the Reclamation Act; Chapter 62 amends the Irrigation Districts Act of 1920 in respect to organization of boards, procedure in passing by-laws, debentures, amalgamation of districts, etc.; Chapter 63 provides for assistance to the Lethbridge Northern Irrigation District. In *British Columbia,* Chapter 21 (first session) provides protection for breeders of goats and requires the use of pure-bred sires only; Chapter 72 (first session) amends the Water Act and deals mainly with the incorporation powers in, and management of, Improvement Districts.

Co-operation.—In *Nova Scotia,* Chapter 46 amends the Act to encourage the incorporation of Farmers' Co-operative Societies. In *Manitoba,* Chapter 10 amends the Co-operative Associations Act of 1916 in a number of details, the most important being the provision whereby any association may establish locals at any point in the province under such conditions as may be determined by by-law of the association; the provisions of the Co-operative Associations Act are made applicable to all co-operative associations carrying on business in the province, whether incorporated under this Act or not, and it is provided that all associations subject to this Act shall be also subject to the provisions of the Companies Act except where such provisions are inconsistent with this Act. In *Saskatchewan,* Chapter 9 amends an Act to incorporate The Saskatchewan Co-operative Creameries Limited by making the Sale of Shares Act non-applicable to this Act; Chapter 76 confirms an agreement with The Saskatchewan Co-operative Elevator Company, Limited. In *Alberta,* Chapter 35 amends the Alberta Co-operative Credit Act in respect to the payment of stocks, the management of the business of the society which is to be vested in a board of directors, the obligations of borrowers, the investing of paid-up capital, applications for loans, etc. In *British Columbia,* Chapter 9 of the second session deals with the disposition of profits under the Co-operative Associations Act.

Corporations.—In *Prince Edward Island,* twenty out of the thirty-five Acts were incorporation acts. In *Nova Scotia,* Chapter 15 was enacted to facilitate the incorporation of owners of vessels in the fishing industry; Chapters 36 and 37 amend the Act to facilitate the incorporation of Farmer's Fruit, Produce and Warehouse Associations; Chapters 39 and 40 amend the Domestic, Dominion and Foreign Corporations Act of 1912. In *New Brunswick,* Chapter 42 amends the Corporations Tax Act by imposing a tax of 1 p.c. upon the gross cash receipts of telegraph companies and a fixed tax upon extra-provincial corporations. In *Quebec,* Chapter 92 validates and provides for permits for certain acquisitions and alienations of immovable property by corporations and persons in mortmain. In *Ontario,* Chapter 12 amends the Corporation Tax Act by imposing taxes or additional taxes on bank reserves, railways, telephone companies, etc.; Chapter 58 amends the Ontario Companies Act by authorizing corporations to give power of attorney, to have official seal for use abroad which agents may be authorized to use; it also

requires an annual statement from every corporation; Chapter 59 amends the Timber Slide Companies Act; Chapter 61 amends the Loan and Trust Corporations Act by forbidding trust companies to borrow on debenture or by accepting deposits; it also deals with investment of funds received on guarantee receipts, securities allocated to guaranteed investments and quarterly returns as to guaranteed investments; it also authorizes a trust company to invest funds other than trust funds and to receive deposits which are to be deemed trust moneys and guaranteed; it also requires quarterly returns as to deposits from loan companies; it also empowers a company to have official seal for use abroad and to submit to inspection of its affairs. In *Saskatchewan*, Chapter 33 amends the Companies Act by requiring a company before registration to file a certified copy of its charter and by-laws, a petition and a statutory declaration; it also permits the adoption of the name of a defaulting company by another company. In *British Columbia*, Chapter 50 of the second session amends the Trustee Act by empowering trustees to expend any moneys of a trust estate or to borrow or raise moneys by mortgage upon such estate for repairs or improvements.

Education.—In *Prince Edward Island*, Chapter 3 amends the Public School Act of 1920 by defining "school age" as being from six to fifteen years inclusive, such age being attained at any time from July 1 to June 30; by empowering the Board of Education to make provision for medical inspection of schools, to appoint school health inspectors, fix their remuneration, make regulations respecting their qualifications, etc.; it repeals the provision made for the salaries of classroom assistants; it raises the attendance requirements, which entitle a teacher to the full government grant, from 50 to 60 p.c; it imposes a poll tax on every male resident, with certain exemptions, over twenty-one years of age; it extends the school franchise to women in the capacity of mothers to school children; it provides for grants for school equipment; for temporary licenses to teachers; fixes the age of compulsory attendance as between seven and thirteen during 60 p.c. of the school year and under penalty up to twenty dollars and increases the civic poll tax; Chapter 4 amends an Act to Amalgamate Prince of Wales College and Provincial Normal School, giving certain powers to the government respecting the appointment of staff and to the Board of Education to make regulations for said institution; Chapter 5 leaves the Provincial Agricultural and Technical School under the direction of the Commissioner of Agriculture and makes it the duty of the Chief Superintendent of Education to inspect said school; the officers of the school are to be appointed by the provincial government, which is also to be responsible for its maintenance and empowered to make regulations respecting courses, etc.; Chapter 6 amends the School Supplies Act by empowering the Board of Education to appoint or remove a manager of the business carried on under the provisions of the Act. In *Nova Scotia*, Chapter 59 amends the Education Act by a clause providing that one of the school trustees may be a poll tax payer or a *woman*; it also provides for a penalty of one cent

for each half day's absence of a child coming under compulsory regulations; Chapter 60 amends the Education Act by extending the rights and privileges of male poll tax payers to women qualified to vote under the Nova Scotia Franchise Act; Chapters 61 and 62 amend the Education Act, the latter chapter providing that the school fees and necessary travelling expenses of children compelled to attend another school on account of no school being provided in their own section shall be a charge on the defaulting school section. In *New Brunswick*, Chapter 22 amends the Schools Act, empowering certain cities and towns to make certain assessments; Chapter 23 extends certain powers to the Board of Education respecting normal school and staff; it also empowers the Chief Superintendent to allow $100 for each department providing for retarded pupils and another $100 to teachers taking special training for such work; in relation to Fredericton, Chapter 24 increases the amount for which debentures may be raised. In *Quebec*, Chapter 47 amends the Education Act, forbidding certain school corporations to let contracts without appropriation of funds, permitting special tax if no funds available, and the borrowing of money to carry out an Order of the Superior Board of Health; it also provides for pensions for officers of primary instruction; Chapter 3 authorizes grants of $1,000,000 each to Laval and McGill Universities, payable by annual instalments of not more than $200,000 each for purposes of education, and loans to provide the necessary funds; Chapter 39 provides for the establishment and maintenance of a provincial dairy school and of intermediate agricultural schools; Chapter 49 authorizes the Catholic School Commission of Montreal to issue bonds or debentures up to $700,000 for school sites and buildings, enlarges the territory of the commission, defines the composition of corporation and provides for an endowment fund for teachers; Chapter 50 affects the Protestant School Commissioners of Montreal, apportioning certain amounts for the maintenance of schools under their control; Chapter 51 and 52 affect the School Commissioners of Quebec City and Sherbrooke; Chapter 53 amends the charter of the Polytechnic School, Chapter 54 of the Montreal School for Higher Commercial students, Chapter 55 of the Quebec Technical School; Chapter 153 provides for the incorporation of the Educational and Charitable Institute at Westmount. In *Ontario*, Chapter 89 amends the schools laws by defining what may be deemed rural public and separate schools, by guaranteeing payment of school debenture, by authorizing by-laws setting apart township school area with a board of five trustees; by requiring a county grant to continuation schools equal to the legislative grants; by permitting Union School section to become consolidated school section; Chapter 90 or The Vocational Education Act 1921 applies to all art, industrial and technical schools and departments, classified as (1) industrial, (2) Home-making, (3) Art, (4), Technical high, (5) Agricultureal high and (6) Commercial high; the courses of instruction may include (1) General full-time day courses, (2) Special full-time day courses, (3) part-time day courses and (4) Evening school courses; the estimates of three committees having jurisdiction over this work shall

be included in the estimates submitted to the council of the municipality for the year; Chapter 91 amends the School Sites Act by enabling a board to take possession of a school site immediately after fulfilling the legal requirements, a judge being authorized to issue his warrant to the sheriff to deal with any opposition or resistance to the taking possession. In *Manitoba,* Chapter 49 amends the Public Schools Act by extending the powers of a rural municipality, by permitting a trustee in a consolidated school district to operate a van route or routes, by legalizing the making of a by-law to dissolve a municipal school district, by empowering trustees to supervise and direct sports and work during the vacation, and by many other alterations in sections; Chapter 50 further amends the School Act by allowing a municipal school board to add to the school levy up to five per cent to cover clerical work, etc.; Chapter 51 provides that in Brandon city the trustees be elected by electors generally instead of by wards as heretofore. In *Saskatchewan,* Chapter 44 amends the University Act in respect to amount received under the Succession Duty Act and to the subjects for anatomy; Chapter 45 amends the Secondary Education Act by repealing subsections referring to fees in high schools and to expulsion of pupils, by amending other sections referring to fees for secondary education and by providing for a grant of $4 a day to a high school or collegiate institute for each teacher employed and of 15 cents per day for each non-resident pupil in actual attendance in classes above Grade VIII; Chapter 46 amends the School Act by repealing a subsection referring to powers of Superintendent of Education, by requiring that a nominee for office of trustee be able to read and write, by empowering trustees to provide noon lunch and to pay salary to teachers when sick under certain conditions; Chapter 47 provides for the payment of grants in support of elementary education to the extent of (1) in rural districts, $1.50 for every teaching day a school is in operation and an additional sum of 60 cents the first year and 40 cents the second year a school is open, (2) in town districts $1.50 for every teaching day open, but if the district maintains between 6 and 10 rooms the rate of grant shall be $1.30 per day; between 11 and 25 rooms, $1.10; over 25 rooms, 90 cents; (3) to every district maintaining a school exclusively for pupils above Grade VII, $3 per day subject to certain conditions; (4) to every district providing noon lunch, 50 p.c. of initial cost of equipment; also it provides for science equipment, conveyance, night schools, teacher's residence and special grants; Chapter 48 amends the Education of Soldiers' Dependent Children Act by resident requirements and by making slight changes in the donation of assistance to education. In *Alberta,* Chapter 23 is an new Educational Tax Act replacing the Educational Tax Act of 1907; all land subject to seven exemptions within the province, not exempt from tax by the province, is assessed 3 mills on the dollar; grazing permits are taxed $1\frac{1}{2}$ cents per acre; the minimum tax on land of over one acre in a subdivision is $2.00 and less than one acre is 25 cents; the occupant of land exempt from taxation by the province is assessed 3 mills on the value of the land; Chapter 42 amends the School Grants

Act and the School Assessment Ordinance with reference to assessment and taxation in secondary consolidated school districts and by certain changes in the grants, including the giving of a grant of $4 per day while open to each consolidated secondary school district with an average attendance of 15 pupils; Chapter 43 amends the School Ordinance by adding a section authorizing the organization of Secondary Consolidated Schools and one authorizing the Minister to appoint a Board of Conciliation to investigate disputes between teachers and boards of trustees. In *British Columbia*, Chapter 60, first session, provides the machinery for a superannuation system for school teachers as well as other employees.

Elections.—In *New Brunswick*, Chapter 46 changes electoral sub-districts in nine parishes. In *Ontario*, Chapter 2 is in reference to the preparation of voters' lists; Part I, showing all persons entitled to vote at municipal elections and elections to the Assembly, and Part II, showing all persons entitled to vote at municipal elections only, are required to be printed and revised by county judge. In *Manitoba*, Chapters 17 and 18 amend the Manitoba Election Act particularly in reference to regulations under proportional representation and voters' lists; Chapters 19 and 20 amend the Electoral Divisions Act in reference to certain electoral divisions. In *Saskatchewan*, Chapter 13 amends the Legislative Assembly Act by giving two members to each of the cities of Moosejaw, Regina and Saskatoon and by defining the boundaries of different electoral divisions; Chapter 14 amends the Saskatchewan Election Act, amending sections 7, 13, 158, 176, 194, 226 and forms 40 and 47 and repealing sections 16 to 86, 151, 152, 175, 188 and forms 1 to 22, 43 and 44. In *Alberta*, Chapter 5, section 35 amends the Alberta Election Act, one important clause in the amendment authorizing the provincial government to hold a general plebiscite to ascertain opinion as to the desirability of amending or introducing any legislation. In *British Columbia*, Chapter 17, first session, amends the Provincial Elections Act, providing that ballot papers in the Victoria and Vancouver electoral districts shall state the party or interest which the nominated person represents, also with reference to list of candidates.

Forestry.—In *Nova Scotia*, by Chapter 2, a Commissioner of Forests and Game is appointed and regulations are made for protection against fires. In *New Brunswick*, Chapter 33 makes several amendments to the Forest Fires Act, one of these making any one wilfully responsible for a forest fire liable for the cost of extinguishing it. In *Manitoba*, Chapter 24 brings under the provision for wooded districts in the Fire Prevention Act all land within three miles of a forest reserve; it also makes all persons residing north of the 53rd parallel liable to render assistance in case of forest fires; greater powers are given the Fire Commissioner in dangerous fires and travellers are required to give information respecting their camps, etc. In *British Columbia*, Chapter 15, second session, provides for the appointment, and prescribes the duties, of a fire marshall and staff; Chapter 28,

first session, or the Forest Amendment Act, amends regulations in regard to pulp lands and licenses; also increases the assessment per acre for the Forest Protection Fund.

Government and Constitution.—In *Prince Edward Island,* Chapter 7 amends the Statute Law increasing the export tax and chancery court fees and amending the Veterinary Act and Debenture Act. In *Nova Scotia,* Chapter 12 provides for the consolidation and revision of the public statutes; Chapter 21 amends the Interpretation Act and Chapter 22 amends an Act entitled "Of the Executive Council" which is to be composed of such persons as the Lieut.-Governor from time to time thinks fit. In *Alberta,* section 7 of Chapter 12 confers certain of the powers of the Minister of Municipal Affairs upon the Deputy Minister, in reference to sale of lands; Chapter 5 amends the Motor Vehicles Act, The Unearned Increment Tax Act and certain other Acts and ordinances by an Act cited as The Statute Law Amendment Act. In *British Columbia,* Chapter 12, first session, amends the Constitution Act by raising the salaries of Cabinet Ministers holding portfolios to $7,500, the premier's to $9,000 without further salary as head of a department; the sessional indemnity of members is raised to $2,000; the leader of the opposition receives $2,000 in addition to his indemnity.

Health, Medical Profession, etc.—In *Nova Scotia,* Chapter 57 amends the Public Health Act, by providing for salary and expenses of public health nurse, administration of clinic, appointment of health officers, sanitary inspector, etc. In *New Brunswick,* Chapter 44 amends the Public Health Act of 1918 in reference to estimates of sub-district boards, assessment and borrowing powers to carry out provisions of Act. In *Ontario,* Chapter 74 amends the Public Health Act respecting payment of local boards in townships and agreement between urban and township municipalities in the matter of sewage disposal. In *Saskatchewan,* Chapter 65 amends the Venereal Diseases Act by forbidding those affected to follow certain occupations. In *Alberta,* Chapter 17 amends the Public Health Nurse Act respecting qualifications of such nurses; Chapter 18 amends the Registered Nurses Act, also with regard to qualifications; Chapter 20 amends the Venereal Diseases Act with reference to examination of persons in custody; Chapter 21 amends the Public Health Act especially in connection with constitution, etc., of health districts, vaccination, etc. In *British Columbia,* Chapter 17, second session, empowers medical practitioners under warrant of Health Officers to enter any building for purposes of making inquiry and examination with respect to health and may require any persons to be removed to nearest hospital; it also provides for isolation, etc., in case of infectious diseases.

Highways.—In *Nova Scotia,* Chapter 17 authorizes a provincial loan of $350,000 for liabilities incurred on maintenance account of highways; Chapters 51, 52 and 53 amend the Public Highways Act, the first mentioned exempting certain properties from the Highways

tax, the second imposing a property tax and a poll tax on municipality or districts in the interest of highways. In *New Brunswick*, Chapter 27 amends "an Act to provide for the construction of and improvement of highways under Federal Aid" in respect to the amount authorized to be borrowed; Chapter 28 amends the Highway Act of 1918 by making provision for taking gravel from shore of stream or lake and in respect to regulations which the provincial government is authorized to make; Chapter 29 makes further provision for permanent bridges and work of a permanent character. In *Quebec*, Chapter 7 amends the Act providing for the abolition of toll bridges and turnpike roads in the province; Chapter 11 amends the Act relating to the maintenance of provincial roads and of certain municipal roads, and the act relating to the maintenance of winter roads on certain provincial roads; Chapter 12 amends the law respecting the building and improvement of roads in the province. In *Ontario*, Chapter 27 amends the Provincial Highway Act with reference to right to open up and use original road allowance, contributions by municipalities other than county or by board or commission, deductions from other grants on default in municipal contributions, contributions by commission or other controlling body, provision for payment and continuing provincial highway through city, town or village; Chapter 25 amends the Highway Improvement Act by adding $7,000,000 to highway improvement fund, by authorizing a by-law for levying of special rate on township property, etc. In *Saskatchewan*, Chapter 19 amends the Highways Act in respect to public reserves. In *British Columbia*, Chapter 18, second session, gives the Minister of Public Works authority to regulate, limit or prohibit traffic on any highway where damage is liable to be done through extraordinary traffic thereon.

Housing.—In *New Brunswick*, Chapter 13 authorizes Local Housing Board with consent of "Local Authority" to sell lands and houses, and provides means for levying and collecting losses caused by such a sale; it also defines "Local Authority" and "Local Housing Board". In *Manitoba*, Chapter 33 amends "An Act respecting Housing" by giving authority to municipalities to expend housing moneys to aid veteran mortgagors or to assist in redeeming property.

Hydro-Electricity.—In *New Brunswick*, Chapter 39 amends the Electric Power Act of 1921 by increasing the amount of loan. In *Ontario*, Chapter 20 amends the Power Commission Act by confirming certain by-laws; Chapter 21 purposes to make more equal provisions for the cost of hydro-electric power in Ontario, creating a fund account and paying grants not exceeding 50 p.c. of the capital cost where power is supplied to rural power districts; Chapters 22 and 24 are concerned with agreements between the Hydro-electric Power Commission of Ontario and the cities of Guelph and Toronto.

Institutions, Custodial and Benevolent.—In *Nova Scotia*, Chapter 7 provides for the establishment of hospitals and convalescent homes for insane persons, also for the appointment of a medical

superintendent for such; Chapter 8 provides for the establishment of an institution for the custody, treatment, cure and education of mentally defective persons, including morally defective persons, of a low grade; it also provides for a medical superintendent and staff for such; Chapter 166 changes the name of Halifax Infants' Home to The Infants' Home and Women's Hospital. In *New Brunswick*, Chapter 36 provides for charging for the maintenance of pauper lunatics confined in the Provincial hospitals; Chapters 71 and 79 affect the Victoria Public Hospital and the General Hospital at St. John. In *Quebec*, Chapter 86 authorizes institutions to entrust the custody of foundlings to persons, etc.; Chapter 152 provides for the incorporation of *L'Orphelinat Apostolique de la Malbaie* and Chapter 153 for that of the Educational and Charitable Institute; Chapters 154 to 156 provide for the incorporation of various other institutes. In *Manitoba*, Chapters 30 and 31 amend the Hospital Aid Act by a proviso for definition of "resident," by increasing provincial aid and the amount a hospital may charge against municipality for public patients. In *Saskatchewan*, Chapter 6 amends an Act respecting Sanatoria for the treatment of early cases, and hospitals for advanced cases of tuberculosis, by providing for a board of directors, etc.; Chapter 74 amends the Union Hospital Act by providing for the payment of board, etc. In *Alberta*, Chapter 16 amends the Hospitals Ordinance by providing for grants to hospitals, payments by local authorities and requiring vital statistics; Chapter 40 amends an Act respecting Gaols and Prisons by naming penalties for certain infringements of the rules by employees and by discharged prisoners; it also permits the warden, etc., to examine mail for prisoners.

Labour.—In *Nova Scotia*, Chapter 48 amends the Workmen's Compensation Act, especially section 5, chapter 61 of 1919. In *Quebec*, Chapter 46 is an Act respecting disputes between employers and employees of municipal public services and makes it illegal for an employer to cause a lockout and for employees to strike before submitting question to board of arbitration; it also provides for a board of arbitration fixing the remuneration of its members. The penalty provided for contravention of the Act by the employer is from $100 to $1,000 and for the employee between $10 and $50 for every day strike or lock-out lasts; the arbitrators are authorized to state which party is to bear the cost of arbitration. In *Ontario*, Chapter 77 amends the Trades and Labour Branch Act by authorizing the provincial government to make regulations affecting employment service councils. In *Manitoba*, Chapter 83 amends the Workmen's Compensation Act by striking out certain limits; by providing that compromises must be approved by the board; that the board may file claim for injured men; that principal is liable for sub-contractor and that an employer may be admitted to compensations. In *Saskatchewan*, Chapter 73 amends the Workmen's Compensation Act with reference to definition of "workman" and by raising the limit of compensation. In *Alberta*, Chapter 30

amends the Workmen's Compensation Act of 1918 in respect of appointment of the commissioners; of bringing an industry within the scope of the Act; and of the amount of compensation.

Mining.—In *Nova Scotia,* Chapter 20 amends and consolidates the Mines Act. In *Ontario,* Chapter 11 amends the Mining Tax Act in respect of limitations upon deductions for municipal income tax, of relief in case of forfeiture for non-payment and of forfeited lands sold for non-payment of school taxes; Chapter 16 amends the Mining Act of Ontario by defining the noun "Mine" and by amending or repealing several clauses and sections; Chapter 17, respecting Natural Gas, has particular reference to powers of Minister and referee.

Municipal Affairs.— In *Nova Scotia,* Chapter 27 amends the Municipal Act with reference to sheep protection; Chapter 34 amends the Municipal Courts Act; Chapter 44 amends the Municipal Debentures Act in respect of manner in which money is raised and of the form of debenture. In *New Brunswick,* Chapter 43 amends the Municipalities Act, especially in respect of provisions for licensing and regulating ferries and fixing rate of fares. In *Quebec,* Chapter 48 amends the Quebec Municipal Code; Chapter 81 authorizes municipalities, in certain cases, to provide sinking funds; Chapters 105 to 109 amend certain articles of the Quebec Municipal Code. In *Ontario,* Chapter 63 amends the Municipal Act in respect of authority of municipal board to separate farm lands from towns and villages; of adjustments of assets and liabilities to be determined by board; of disqualification of certain persons as members of council; of power to use excess land by way of compensation to owners; of establishing restricted districts or zones; of buildings, etc.; Chapter 64 amends the Local Improvement Act; Chapter 65, the Planning and Development Act; Chapter 66 makes regulations respecting public improvements and services in certain suburban areas; Chapter 68 amends the Municipal Tax Exemption Act; Chapter 69 the Statute Labour Act. In *Saskatchewan,* Chapter 11 amends the Municipalities Relief Act by authorizing municipalities to borrow from banks for advances to farmers suffering from crop failure; Chapter 39 amends the Municipal Hail Insurance Act, particularly by imposing a penalty in cases of failure to make reports. In *Alberta,* Chapter 15 amends the Municipal Hospitals Act; Chapter 26 amends the Municipality Finance Commission Act, dealing especially with arrears in taxes and school taxes; Chapter 27 amends the Hail Insurance Act; Chapter 30 amends the Town Act; Chapter 31 the Village Act; Chapter 32 the Municipal District Act. In *British Columbia,* Chapter 9, first session, gives the councils of municipalities power to establish their own cemeteries, etc.; Chapter 44, first session, gives municipal councils power by a three-fifths vote to pay out of general revenue the costs of any special survey under the Special Surveys Act; municipal corporations are exempted from payment of registration fees under the Motor Vehicle Act in respect of vehicles used in the police and fire departments; Chapter 37, second session, enables municipalities to borrow money

by by-law to redeem obligations which are secured by hypothecation of arrears of taxes; Chapter 38, second session, provides financial aid for municipalities on the basis of population.

Partnerships.—In *Nova Scotia*, Chapter 4 or "The Registration of Partnerships Act" defines "partnership", requires certification of registration, etc. In *New Brunswick*, Chapter 19, respecting partnership, defines partnership, prescribes rules for determining whether or not a partnership exists, defines liabilities of partnership, mutual rights and duties, etc.

Soldiers.—In *New Brunswick*, Chapter 25 authorizes the Mayor of St. John to take over the assets of the Soldiers' Compensation Association. In *Quebec*, Chapter 78 authorizes an agreement between Provincial and Dominion Governments whereby the latter may establish its hospitals in province for insane soldiers, and whereby certain powers are vested in officers of Dominion Government. In *Ontario*, Chapter 40 defines what is deemed sufficient proof of death of soldiers and sailors while on active service. In *Manitoba*, Chapter 68 amends the Soldiers' Taxation Relief Act.

Temperance.—In *Nova Scotia*, Chapter 58 amends the Temperance Act with reference to vendors, penalties, etc. In *Quebec*, Chapter 24 is an Act of 145 sections respecting alcoholic liquors and Chapter 25 respecting the possession and transportation of alcoholic liquor. In *Ontario*, Chapter 73 amends the Ontario Temperance Act by defining "bonded liquor warehouses," permitting appeals from convictions to judge of county or district court, also appeals from order of dismissal; also amends section 139 in conformity with prohibition of importation. In *Saskatchewan*, Chapter 70 amends several sections of the Saskatchewan Temperance Act; among these are amendments in reference to inspectors and enforcement officers, inventories by holders of permits, restriction on sale by druggists, keeping liquor on premises where soft drinks are sold. In *British Columbia*, Chapter 30, first session, provides for Government control and sale of alcoholic liquors under a board of three persons appointed by the government; these liquor stores are to be opened at various centres; vendors in charge have power to issue permits for the purchase of liquor and sell liquor upon physicians' prescription; the net profits are to be divided equally between the public service of the province and the municipalities for hospitals, etc.

Transportation.—In *Nova Scotia*, Chapter 63 amends the Motor Vehicle Act. In *Quebec*, Chapter 2 refers to the contract between the Government and the Interprovincial and James Bay Railway Company respecting the construction of a line of railway from Kipawa to the Rivière des Quinze ; Chapter 31 amends the Revised Statutes of 1909 respecting the annual returns to be made by railway companies; Chapter 84 is in reference to the exercise of certain powers by railway companies. In *Ontario*, Chapter 12 amends the Corporation Tax Act by imposing an additional tax on railways. In *Manitoba*, Chapter 52 amends the Manitoba Railway Act by

extending the period of limitation in section 116 of Chapter 168, R.S. of Manitoba, 1913, to two years. In *Saskatchewan*, Chapter 68 amends the Vehicles Act particularly in reference to information given *re* vehicles and to prohibition of driving and impounding of vehicle. In *British Columbia*, Chapter 36, second session, amends the Motor Vehicles Act by requiring that all drivers of motor vehicles shall slow up to ten miles an hour when approaching a curve, etc.; municipally owned vehicles and trailers are declared exempt from registration and license fees, as are vehicles and trailers owned and used by persons who lost a limb in the war; Chapter 41, second session, requires that no electric street railway or tramway company shall operate any "one-man car" without consent of the Minister of Railways.

Vital Statistics.—In *Alberta*, section 7 of Chapter 16 adds a section to the Hospital Ordinance, requiring the vital statistics form to be filled up and signed by the mother before she leaves hospital; Chapter 19 amends the Vital Statistics Act by naming the Deputy Minister of Health as Registrar General, providing for the appointment of a Deputy Registrar General, requiring registration of both birth and death in case of still-born children, raising the fee for registry search, etc.

PRINCIPAL EVENTS OF THE YEAR 1921.

The Imperial Conference.—The Imperial Conference of the Prime Ministers of the countries included in the British Commonwealth of Nations, was held in London from June 20 to August 5, 1921, with the Prime Minister of the United Kingdom, Rt. Hon. D. Lloyd George, as *ex officio* Chairman. Canada was represented by Rt. Hon. Arthur Meighen.

In his opening address of welcome the Prime Minister of the United Kingdom made the following statement: "The British Empire is progressing very satisfactorily from a constitutional standpoint. The direct communication between Prime Ministers, as established during the war, has, I think, worked very well, and we have endeavoured to keep you thoroughly abreast with all important developments in foreign affairs . . . . The British Dominions have achieved full nationhood and now stand beside the United Kingdom as equal partners in the dignities and responsibilities of the British Commonwealth."

Among the important subjects to be considered was the renewal of the Anglo-Japanese treaty, Mr. Meighen taking the ground that it should not be renewed and impressing upon the Conference the desirability of close friendship with the United States. This question was finally settled at the Washington Conference (*q.v.*) by the widening of the Anglo-Japanese Alliance into a four power pact, to which both Japan and the United States are parties.

With regard to the projected Constitutional Conference, the following resolution was adopted:—

(a) Continuous consultation, to which the Prime Ministers attach no less importance than the Imperial War Conference of 1917, can only be secured by a substantial improvement in the communication between the component parts of the Empire. Having regard to the Constitutional developments since 1917, no advantage is to be gained by holding a Constitutional Conference.

(b) The Prime Ministers of the United Kingdom and the Dominions and the Representatives of India should aim at meeting annually or at such longer intervals as may prove feasible.

(c) The existing practice of direct communication between the Prime Ministers of the United Kingdom and the Dominions, as well as the right of the latter to nominate Cabinet Ministers to represent them in consultation with the Prime Minister of the United Kingdom, are maintained.

Other resolutions were passed regarding co-operation in the Imperial wireless scheme, approving of uniform legislation on the limitation of shipowners' liability by clauses in bills of lading, asking the radio research board to investigate and report on wireless telephony, stating that "in the interests of the solidarity of the British Empire, it is desirable that the rights of Indians to citizenship should be recognized," and urging that a conference of representatives of the Patent Offices of the Dominions should be held in London to consider a system of granting patents which should be valid throughout the Empire.

At the close of the Conference an address to the King was passed, declaring that "we have been conscious throughout our deliberations of a unanimous conviction that the most essential of the links that bind our widely spread peoples is the Crown, and it is our determination that no changes in our status, as peoples or as Governments, shall weaken our common allegiance to the Empire and its Sovereign."

The Washington Conference.—A Conference on the Limitation of Armaments was held from November 12, 1921, to February 6, 1922, at Washington, D.C., on the invitation of the United States Government, addressed on August 11, 1921, to the Governments of Great Britain, France, Italy and Japan. Invitations were also extended to China, Belgium, the Netherlands and Portugal, asking them to participate in the discussions on Pacific and Far Eastern questions to be held in connection with the Conference. The Dominion of Canada was represented by Right Hon. Sir Robert L. Borden.

On the opening of the Conference, the Hon. C. E. Hughes, Secretary of State of the United States, was elected as Chairman. Two committees on programme and procedure were appointed to suggest methods of organization and procedure. As a result of their deliberations it was decided to appoint two main committees: (1) The Committee on Limitation of Armaments, consisting of all the Plenipotentiary Delegates of the five powers—the United States, the British Empire, France, Italy and Japan; (2) the Committee on

Pacific and Far Eastern Questions, consisting of all the Plenipotentiary Delegates of the nine powers—the five already mentioned, together with Belgium, China, the Netherlands and Portugal. These Committees appointed sub-committees to examine and report upon particular questions when this was considered desirable.

Before the Conference met the United States Government had prepared and submitted to the other Powers a list of headings intended to serve as tentative suggestions as to agenda. Practically this came to be regarded as the informal agenda. It was as follows: *Limitation of Armament:* (1) Limitation of Naval Armament, (a) basis of limitation; (b) extent; (c) fulfilment: (2) Rules for control of new agencies of warfare: (3) Limitation of Land Armament. *Pacific and Far Eastern Questions:* (1) Questions relating to China, (a) Principles to be applied; (b) applications with regard to territorial integrity; administrative integrity; open-door equality of commercial and industrial opportunity; concessions, monopolies or preferential economic privileges; development of railways; preferential railroad rates; status of existing commitments: (2) Siberia, under headings similar to the preceding: (3) Mandated islands and electrical communications in the Pacific.

In the opening session on November 12, 1921, the Hon. C. E. Hughes, Chairman of the Conference, laid down definite proposals that the great powers should abandon their programmes for the building of battle ships and battle cruisers; that certain new capital ships and certain older vessels should be scrapped; that no new replacement tonnage should be laid down for 10 years and that when constructed the maximum tonnage should be limited to 500,000 for the United States, 500,000 for Great Britain and 300,000 for Japan. This proposal was accepted "in principle" by the delegates, but it took several weeks of discussion before the details were arranged.

These provide for a discontinuance of all building of capital ships during 10 years, France and Italy being allowed certain replacements after 1927. Capital ships include "every vessel of war, not an aircraft carrier, whose displacement exceeds 10,000 tons standard displacement, or which carries a gun with a calibre exceeding 8 inches." Existing capital ships are to be scrapped so as to leave the United States 18 (525,850 tons), the British Empire 20 (558,980 tons), Japan 10 (301,320 tons), France 10 (221,170 tons), Italy 10 (182,800 tons). After 1931 ships over 20 years old may be replaced so as to maintain ratios of 525, 525, 315, 175, 175 among the five powers, no vessel being over 35,000 tons. The treaty is to be effective for 15 years and to continue after that unless denounced with 2 years' notice. It may be suspended in time of war, with the exception of the articles relating to scrapped vessels.

Aircraft carriers are limited with respect to total and individual tonnage, but aircraft themselves are not limited; submarines and fighting surface auxiliaries may not exceed 10,000 tons displacement or carry guns over 8 inches, but there is no limitation in their total tonnage. Merchant vessels may not be prepared for military use in time of peace except to stiffen decks for guns of not over 6 inches.

No limitation is placed on land forces or armaments. The *status quo* "with regard to fortifications and naval bases" is to be maintained in the American, British and Japanese insular possessions in the Pacific, except Hawaii, Australia, New Zealand and the Japanese home islands and the islands nearest the American continent except the Aleutians.

Rules were adopted declaring the use of submarines against merchant vessels to be piracy and prohibiting the use of noxious and poisonous gases, as well as a resolution urging the calling of a conference to consider the laws of war.

The Committee on Far East and Pacific Questions was concerned primarily with China, though Siberia and Pacific island questions were also considered. Under the main Chinese treaty signed February 6, 1922, the powers other than China agreed to respect the sovereignty, the independence and the territorial and administrative integrity of China; to provide the fullest opportunity to China to develop and maintain an effective and stable government; to use their influence for establishing and maintaining the principle of equal opportunity for the commerce and industry of all nations throughout China and to refrain from seeking special rights or privileges in China. The Contracting Powers also agreed not to support any agreements by their respective nationals designed to create spheres of influence, while China agreed not to exercise or permit unfair discrimination of any kind throughout the railways of China.

The Quadruple Pacific Treaty was signed between the United States, the British Empire, France and Japan on December 13, 1921. While it was no essential part of the proceedings of the Conference, it naturally arose out of the deliberations which took place. In it the four parties agreed as between themselves to respect their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean, to summon a conference of the parties for adjustment and arbitration of any controversies arising between any of them, and to consult as to the measures necessary to be taken if their rights were threatened by the aggressive action of any other power. This Treaty, which also applies to the mandated islands, and to the insular possessions of Japan, is to continue for 10 years, and to be terminable thereafter on 12 months' notice.

Second Assembly of the League of Nations.—The Second Assembly of the League of Nations met at Geneva, Switzerland, from September 5 to October 5, 1921, with Dr. van Karnebeek (Holland) as president. Forty-eight states were represented, among them Canada by Right Hon. C. J. Doherty and Sir George H. Perley. The first constructive Act was to complete the constitution of the International Court of Justice. This consists of the following judges elected for a period of nine years: Prof. Altamira (Spain), Prof. Anzilotti (Italy), Senor Barboza (Brazil), Dr. de Bustamente (Cuba), Lord Finlay (Great Britain), Judge Loder (Holland), Prof. Bassett Moore (United States), Prof. Oda (Japan), Prof. Weiss (France), Prof. Max Huber (Switzerland) and Judge Nyholm (Denmark).

The republics of Esthonia, Latvia and Lithuania were admitted to the League, bringing the membership of the League to 51 States. The states still outside of the League are as follows: United States, Germany, Russia, Turkey, Egypt, Hungary, Ecuador, Mexico.

Among the matters which were considered at the second meeting of the Assembly were the troubles of Poland and Lithuania, the controversy between Bolivia and Chile, the proposals for the relief of the starving population of Soviet Russia, the international traffic in women and children and the matter of expenses. As regards the latter it was decided that, subject to ratification by the Governments, Great Britain and France should each pay 90 units towards the expenses of the League, China, India, Italy and Japan 65 units each, Canada and various other countries 35 units each, other smaller states paying less, until the minimum is reached with Albania, Costa Rica, Guatemala, Honduras, Siberia, Luxemburg, Nicaragua, Panama, Paraguay and Salvador, paying 2 units each. Under this revision of the apportionment of expenses Canada's contribution is substantially reduced.

The League of Nations Society of Canada.—At a meeting held in Ottawa on May 31, 1921, the League of Nations Society of Canada was formed. The Governor-General of Canada presided, and such prominent leaders in Canadian public life as Sir Robert Borden, Sir George Foster, Hon. Dr. Béland and others were present.

The following resolution was carried unanimously: "that the meeting proceed to the organization of the League of Nations Society of Canada with the following objects: (1) to promote international peace; (2) to furnish information about the League of Nations, its principles, its organization and its work; (3) to study international problems and Canada's relations thereto as a member of the British Commonwealth and the League of Nations; (4) to foster mutual understanding, goodwill, and habits of co-operation between the people of Canada and other countries, in accordance with the spirit of the League of Nations; (5) to promote the establishment of provincial or local associations, clubs, or other bodies having like objects, and to co-operate with any existing organization for such purposes."

The following officers were elected: honorary presidents: Rt. Hon. Arthur Meighen, Hon. (now Rt. Hon.) W. L. Mackenzie King, and Hon. T. A. Crerar; president, Rt. Hon. Sir Robert Borden; vice-presidents, the Lieutenant-governors of Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia, Prince Edward Island, Saskatchewan, Alberta, Rt. Hon. Sir George Foster, Rt. Hon. C. J. Doherty, Hon. N. W. Rowell, Hon. Dr. Béland; honorary secretary, Vincent C. Massey; honorary treasurer, A. J. Brown.

Dominion General Election.—On September 21, 1921, the Right Hon. Arthur Meighen announced the reconstruction of his Cabinet, and shortly afterwards the dissolution of the Thirteenth Parliament took place. At the general election of December 6, 1921, the Government was defeated, retaining only 50 seats. The Liberals,

having carried 118 constituencies, took office on the resignation of Mr. Meighen, with Hon. (now Rt. Hon.) W. L. Mackenzie King as Prime Minister. One of the outstanding features of the election was the rise of a third party, the Progressives, which, under the leadership of Hon. T. A. Crerar, carried 65 seats in Ontario and the West. Besides these the Labour party elected two members, one in Winnipeg and one in Calgary. On the meeting of Parliament the Progressives renounced the position of official Opposition, to which their numbers gave them a claim; the Conservatives, therefore, under the leadership of Mr. Meighen, constitute the official Opposition in the Fourteenth Parliament.

Provincial General Elections.—In Saskatchewan at a general election on June 9, 1921, the Liberal Government of Premier Martin was returned to power with a slightly diminished majority, carrying 45 out of 63 seats.

In Alberta, at a general election on July 18, 1921, the Liberal Government of Hon. Chas. Stewart was defeated by the Farmers' organization, which secured 38 out of the 61 seats in the Legislature. On August 13, their leader, Hon. Herbert Greenfield, took office as Premier.

In Manitoba, at a general election which took place on July 18, 1922, the Norris Government was defeated, the United Farmers securing a working majority and organizing a government headed by the Hon. John Bracken, formerly principal of the Manitoba Agricultural College.

Acquisition of the Grand Trunk by the Government.—This subject is dealt with in the sub-section on steam railways, pages 527-528.

The Economic and Financial Year.—Throughout the year 1921 the general deflation of prices which had been so much in evidence in the latter part of 1920, continued, though at a slackening rate; indeed, at the end of the year there was a slight upward movement. The Department of Labour's index number of wholesale prices (average prices for 1890-1899=100) fell from 281·3 in January to 230·7 in December (see p. 644), a decline of approximately 18 per cent during the year. The Department of Labour's record of changes in the cost of living in Canada, based upon weighted retail prices (see p. 647) shows a decline from 192 to 156, or 18·75 per cent, between December, 1920, and December, 1921, 1913 prices being considered as 100. These declines were naturally most welcome to urban consumers, who had been very hard hit by the prolonged and rapid increase in the cost of living during the war.

Declining prices were naturally less acceptable to the producers, more especially to those classes of producers who, like the farmers, were most affected thereby. The prices of the commodities which the farmers had to sell declined far more rapidly than the prices of the commodities which they had to buy, this decline being graphically shown on page 273. According to this chart and its accompanying

table, the average prices which the farmer received in 1921 were 147·5 as compared with 204·9 in 1920 and 252·7 in 1919, average prices for the quinquennium 1909-1913 being considered as 100. To put it in another way, the farmers' selling prices for 1921 were 28 per cent below those of 1920. The farmer, indeed, was not alone in his troubles. Producers of many other primary commodities, among them producers of metallic minerals, such as nickel, copper, etc., suffered in a similar way and for similar reasons, as may be deduced from the statistics of the quantity and value of mineral production, published on page 337.

Prices of manufactured commodities in almost all cases came down less rapidly than those of the raw materials of which they were composed. Thus, in the metals and implements class, the average price of metals fell from 206·8 in January to 168·5 in December, while implements fell only from 271·7 to 245. The disparity was to some extent inevitable, partly because of the lapse of time involved in converting the primary commodity into a finished manufactured article and partly because of the fact that the weekly wage rates of the employees in manufacturing establishments, once fixed, could not readily be altered. (Their average annual receipts, might, of course, be reduced through the unemployment consequent upon a reduced demand for the commodities which they produced). A similar state of affairs obtained throughout the great transportation industry and in coal mining. Even at the time of writing, this disproportion in the deflation in different industries has not been completely corrected.

For the above reasons unsettled and depressed conditions prevailed throughout the business world in 1921. Employment in the manufacturing industries was at a low ebb throughout the year, touching its lowest point (68·7 per cent of the number employed in the same factories on January 17, 1920), at the end of the year. For all industries the index number of employment declined from 90·4 in January to 77·9 in December. Fortunately, during 1922 to date employment has fairly rapidly increased, the index of employment as reported by employers being on September 30, 94·6 (see diagram on page 631).

The depression was also reflected in the volume of financial transactions. The amount of exchanges of the clearing houses of chartered banks in 16 leading cities for the calendar year 1921 was only $16,811,287,086 as against $19,588,337,285 in 1920. The deposits of the public in Canada, which had been $1,950,504,230 on December 31, 1920, were a year later only $1,781,749,790. Similarly, the bank notes in circulation declined from $228,758,587 at the former date to $184,602,546 at the latter. The annual values of building permits issued by 35 cities declined from $100,679,839 in 1920 to $94,508,164 in 1921. These declining money values, did not, of course, always represent declining physical quantities. The great decline in the price of commodities was largely, if not mainly, responsible therefor.

The decline in prices was also largely responsible for the lowered values of foreign trade. In the calendar year 1921 the total imports for consumption were valued at $799,394,598 as against $1,336,921,021

in 1920, and the total exports at $816,694,281 as against $1,302,805,114. Here again the monthly statistics of 1922 show a stabilization and even an increase of trade.

On the whole, it would appear that the worst of the depression is over, and that the considerable amount of readjustment which is still to be made before "normalcy" is attained may be completed without any severe shocks to industry. This prediction is, however, dependent upon the continuance of peace and general reconstruction throughout the civilized world. It must not be forgotten that the continent of Europe, formerly the great consumer of the products and raw materials of the newer countries of the world, is still in a very unsettled condition, its purchasing power enormously reduced through the instability of its currencies, through the withdrawal for military purposes of a large portion of its labour force, already depleted by the war, from productive industry, and through its 26 protective tariffs, many of them established for political rather than economic purposes in what were formerly free trade areas, e.g., the old Austria-Hungary. Economic paralysis throughout the European continent must seriously affect the prosperity of Canada, though her foreign trade, as has been pointed out elsewhere in this book, is mainly with the United Kingdom and the United States. These countries, however, especially the latter, are in normal times largely dependent upon the European continent for their markets, and their power to purchase our products is affected by the decline in Europe's purchases of their commodities.

Obituary.—1921: Jan. 2. Sir Frank Baillie, K.B.E., formerly Director of the National Aeroplane Factory, Toronto. William Fitzgerald, Assistant Deputy Minister of Finance and Superintendent of Insurance, 1885-1914. Sir William Peterson, former Principal, McGill University. Jan. 7. Col. H. F. McLeod, M.P. for York-Sunbury. Oscar Gladu, M.P. for Yamaska. Jan. 8. Dr. J. B. Crozier, philosopher and economist. Jan. 10. James Clancy, ex-M.P., Provincial Auditor for Ontario. Jan. 14. Sir William J, Gage, publisher and philanthropist, Toronto. Jan. 15. W. G. Parmelee, Deputy Minister of Trade and Commerce, 1893-1908, Jan. 25. The Right Hon. A. L. Sifton, Secretary of State. His Honour Daniel O'Connell, a Junior Judge of the County Court of the County of York, Ont., to be a local Judge of the High Court Division of the Supreme Court of Ontario. May 1. The Hon. James Emile P. Prendergast, a Judge of the Court of King's Bench for Manitoba, to be a Judge of the Court of Appeal for Manitoba and to be *ex officio* a Judge of the Court of King's Bench for Manitoba. John Evans Adamson, Winnipeg, Man., barrister-at-law, to be a Judge of the Court of King's Bench for Manitoba. May 5. Charles A. Stein, Rivière du Loup, Que., one of His Majesty's Counsel learned in the law for the said province, to be a Puisne Judge of the Superior Court in and for the Province of Quebec. May 8. David A. Macdonald, Vancouver, B.C., one of His Majesty's Counsel learned in the law for the said province, to be

a Judge of the Supreme Court of British Columbia. June 28. Lucien Dubuc, Judge of the District Courts of the Districts of Peace River and Edmonton, to be Stipendiary Magistrate for the North West Territories. July 22. Thibaudeau Rinfret, Montreal, Que., and Joseph Demers, St. Johns, Que., to be Puisne Judges of the Superior Court in and for the said Province of Quebec. William Melville Martin, Regina, Sask., to be a Judge of the Appeal Court for Saskatchewan and to be *ex officio* a Judge of the Court of King's Bench for Saskatchewan. Oct. 7. Robert Smith, Cornwall, Ont., one of His Majesty's Counsel learned in the law for the said province, to be a Judge of the Supreme Court of Ontario and a member of the High Court Division of the said Court and *ex officio* a member of the Appellate Division of the said Court. Oct. 14. Auguste M. Tessier, Rimouski, Quebec, one of His Majesty's Counsel learned in the law for the said province, to be a Puisne Judge of the Superior Court in and for the Province of Quebec. Nov. 7. His Hon. John McKay Junior Judge of the District Court of the Provisional Judicial District of Thunder Bay, Ontario, to be a Surrogate Judge in Admiralty of the Exchequer Court for that portion of the Toronto Admiralty District comprised in the territorial districts of Thunder Bay and Rainy River, in the said province, in the room and stead of Hugh O'Leary, Esquire, resigned. Nov. 14. The Hon. John Edward Martin, a Puisne Judge of the Court of King's Bench for the Province of Quebec, to be a Puisne Judge of the Superior Court in and for the Province of Quebec and to perform the duties of Chief Justice of the said Superior Court in the District of Montreal as it is constituted for the Court of the King's Bench sitting in Appeal. Alexander Rives Hall of the City of Montreal, Quebec, Esquire, one of His Majesty's Counsel learned in the law for the said province, to be a Puisne Judge of the Court of King's Bench in and for the Province of Quebec.

Commissions.—1921: Sept. 3. Henry A. May, Ottawa, Ont., head clerk in the office of the King's Privy Council for Canada, to be a Commissioner to tender and administer to and take from all and every person or persons who now holds or hold, or who shall hereafter hold any office or place of trust or profit or who may be appointed to discharge any duty under the government of Canada, the Oath of Allegiance and the Oath of Office and such other oath or oaths as may from time to time be prescribed by any law or statute in that behalf made and provided. Oct. 31. The Hon. Sir John Douglas Hazen, K.C.M.G., Chief Justice of New Brunswick, to be a Commissioner to investigate into and report upon the claims filed in the Department of the Secretary of State pursuant to advertisements therefor, namely:—(a) Claims of persons residing or carrying on business in Canada who have been subjected to loss and pecuniary damages arising through the destruction of life and property through the illegal warfare of the enemy, and (b) claims for damages to which persons residing or carrying on business in Canada have been subjected for breaches of contracts, which contracts were prevented from

being carried out owing to the operation of the statutory list of persons in neutral countries with whom such contracts were declared illegal for the purpose of determining whether they are within the categories set forth in Annex I of Part VIII (Reparation), Section I of the Treaty of Peace between the Allied and Associated Powers and Germany, signed at Versailles June 28, 1919, and the fair amounts of such claims, and to make such findings as may be of assistance to the Government of Canada in determining which, if any, of such claims should be paid and the extent of payment thereof. **1922:** July 22. James Layton Ralston, Halifax, N.S., one of His Majesty's Counsel learned in the law; Walter McKeon, Toronto, Ont., Doctor of Medicine, and Arthur E. Dubuc, Montreal, Que., Engineer, to be Commissioners to investigate into and report upon complaints made by certain officials of the Great War Veterans' Association and generally questions relating to pensions, medical treatment and re-establishment needs of Canadian ex-service men and their dependents, including the question of canteen funds. The said James L. Ralston to be Chairman and Howard D. Dewar to be Secretary of the said Commission. Aug. 11. Oscar D. Skelton, Kingston, Ont., Professor of Economics, Queen's University, Arthur G. Doughty, C.M.G., Ottawa, Ont., Deputy Head of the Public Archives and Keeper of Records, and Gustave Lanctôt, Ottawa, Ont., Chief French Archivist, Department of Public Archives, to represent Canada at the International Congress of the History of America to be held at Rio de Janeiro during the month of September, 1922. Oct. 16. Alexander R. Forbes, North Sydney, N.S., to be a Commissioner to investigate charges of political partizanship against government employees in the four Counties comprising Cape Breton Island, N.S., Inverness, Victoria, Cape Breton and Richmond, and to report the result of each such enquiry. Alfred Nadeau and Oscar Drouin, Advocates, City of Quebec, to be Commissioners to investigate charges of political partizanship against government employees in the Province of Quebec, and to report the result of each such enquiry. Oct. 27. George S. Inman, Charlottetown, P.E.I., one of His Majesty's Counsel learned in the law for the said province, to be a Commissioner to investigate into and report upon charges of political partizanship against government employees in the said province of Prince Edward Island. Nov. 7. Louis Robichaud, of Richibucto, New Brunswick, barrister-at-law, to be a Commissioner to investigate into and report as to whether the dismissal of Albert M. Goguen from the position of fishery guardian was justified on the ground of inefficiency, and whether Wilfred Bourgeois had efficiently discharged his duties in a similar position last year and since his employment this year. Nov. 11. Malcolm Graeme Cameron, of the Town of Goderich, in the Province of Ontario, one of His Majesty's Counsel learned in the law for the said province, to be a Commissioner to investigate into and report upon charges of political partizanship against government employees in the Province of Ontario.

Imperial Honours.—1922: June 20. To be a Member of His Majesty's Most Honourable Privy Council, the Hon. William Lyon Mackenzie King, C.M.G. (Prime Minister of Canada).

Official Appointments.—1921: Nov. 4. Calvin Lawrence, Ottawa, Ont., Legislative Representative of the Brotherhood of Locomotive Engineers, to be a member of the Board of Railway Commissioners of Canada. **1922:** Jan. 10. Wilfred Laurier McDougald, Montreal, Que., to be chairman of the Board of Harbour Commissioners of Montreal, Que. Jan. 24. Wilfred Laurier McDougald, to be President of said Board, *vice* W. G. Ross, resigned. Jan. 30. Major P. K. Hodgson, O.B.E., Territorial Army Reserve, Suffolk Yeomanry, to be Comptroller of the Household of His Excellency the Governor General, *vice* Captain E. Greene, M.C. (resigned). Jan. 30. By Order in Council Messrs Joseph L. Fortin, Robert F. Grant and Norman Labelle to be appointed Commissioners for the Harbour of Three Rivers, Que., in the room of Messrs Joseph F. Bellefeuille, J. L. Durand and Thomas Tebbutt. Feb. 2. Milton Hersey, B.A.Sc., M.Sc., LL.D., and Emilien Daoust, Montreal, Que., to be members of the Board of Harbour Commissioners *vice* Farquhar Robertson and A. E. D. Labelle (resigned). Feb. 4. George H. Hyndman, to be Comptroller of Currency. Feb. 7. The Hon. Hewitt Bostock, of Monte Creek, B.C., to be Speaker of the Senate in the room and stead of the Hon. Joseph Bolduc. Feb. 10. Peter C. Larkin, Toronto, Ont., to be High Commissioner for Canada in the United Kingdom. Mar. 1. W. Gerard Power, Brig.-Gen. I. L. Tremblay and Jules Gauvin, to be Harbour Commissioners of the port of Quebec, the first named to be President. Mar. 8. Edward Wilson Berry, Calgary, Alberta, Dominion Land Surveyor, to be appointed as special examiner under the Dominion Land Surveys Act. Hon. Rodolphe Lemieux to be Speaker of the House of Commons. Aug. 14. Messrs. R. E. Beattie and Samuel Prenter to be appointed members of the Vancouver Harbour Commission. Sept. 25. Messrs. William Ainslie, John Newland and William B. Sheppard, all of Hamilton, to be appointed members of the Hamilton Harbour Commission and William Ainslie to be Chairman. Oct. 9. Messrs. Laughlin, P. Hughes and Harry C. Earle to be appointed Commissioners for Belleville Harbour. Nov. 11. Harold Leonard Palmer, Charlottetown, P.E.I., Prothonotary of the Supreme Court of Prince Edward Island, to be Registrar in Admiralty of the Exchequer Court in and for the Admiralty District of the Province of Prince Edward Island. Henry Smith, Charlottetown, P.E.I., Clerk of the County Court of Queen's County, to be Marshal in Admiralty of the Exchequer Court for the Admiralty District of the Province of Prince Edward Island in the room and stead of C. R. Smallwood, resigned.

Day of General Thanksgiving.—Monday, November 6, 1922, was appointed by proclamation, as a "day of general thanksgiving to Almighty God for the bountiful harvest and other blessings with which Canada has been favoured this year." In 1921, Thanksgiving Day was Monday, Nov. 7.
